

Pesticides

The invention relates to compounds of the formula

in which

(A) either

X is CH or N,

Y is OR₁ and

Z is O; or

X is N;

Y is NHR₈ and

Z is O, S or S(=O);

R₁ is C₁-C₄alkyl;

R₂ is H, C₁-C₄alkyl, halogeno-C₁-C₄alkyl, C₃-C₆cycloalkyl, C₁-C₄alkoxymethyl, C₁-C₄alkoxy, halogeno-C₁-C₄alkoxy, C₁-C₄alkylthio, halogeno-C₁-C₄alkylthio or CN;

R₃ and R₄ independently of one another are H, C₁-C₄alkyl, C₁-C₄alkoxy, OH, CN, NO₂, a (C₁-C₄alkyl)₃-Si group, where the alkyl groups can be identical or different, halogen, (C₁-C₄alkyl)S(=O)_m, (halogeno-C₁-C₄alkyl)S(=O)_m, halogeno-C₁-C₄alkyl or halogeno-C₁-C₄alkoxy;

R₈ is H or C₁-C₄alkyl;

R₉ is methyl, fluoromethyl or difluoromethyl;

m is 0, 1 or 2;

G is O or S; and

A is a direct bond, C₁-C₁₀alkylene, -C(=O)-, -C(=S)- or halogeno-C₁-C₁₀alkylene and

R₇ is a radical R₁₀; or

A is C₁-C₁₀alkylene, -C(=O)-, -C(=S)- or halogeno-C₁-C₁₀alkylene and

R₇ is -CN, OR₁₀, N(R₁₀)₂, where the radicals R₁₀ can be identical or different, or -S(=O)_pR₁₀;

- R** is an unsubstituted or mono- or polysubstituted C₁-C₄alkyl-, C₂-C₄alkenyl-, C₂-C₄alkynyl-, C₃-C₆cycloalkyl-, benzyl-, aryl or heteroaryl-group, where the substituents of the groups independently of one another are chosen from the group consisting of halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, C₁-C₆alkylthio, halogeno-C₁-C₆alkylthio, phenoxy, CN and nitro, or a phenyl radical which is monosubstituted on two adjacent C atoms by an unsubstituted or mono- to tetrasubstituted C₁-C₄alkylenedioxy group, where the substituents are selected from the group consisting of C₁-C₄alkyl and halogen; or CH₂Si(C₁-C₄alkyl)₃, where the alkyl groups can be identical or different; and
- R₅** is C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, C₁-C₆alkylthio, halogeno-C₁-C₆alkylthio, C₁-C₆alkylsulfinyl, halogeno-C₁-C₆alkylsulfinyl, C₁-C₆alkylsulfonyl, halogeno-C₁-C₆alkylsulfonyl, C₁-C₆alkylsulfonyloxy, halogeno-C₁-C₆alkylsulfonyloxy, C₁-C₆alkoxy-C₁-C₆alkyl, halogeno-C₁-C₆alkoxy-C₁-C₆alkyl, C₁-C₆alkylthio-C₁-C₆alkyl, halogeno-C₁-C₆alkylthio-C₁-C₆alkyl, C₁-C₆alkylsulfinyl-C₁-C₆alkyl, halogeno-C₁-C₆alkylsulfinyl-C₁-C₆alkyl, C₁-C₆alkylsulfonyl-C₁-C₆alkyl, halogeno-C₁-C₆alkylsulfonyl-C₁-C₆alkyl, C₁-C₆alkylcarbonyl, halogeno-C₁-C₆alkylcarbonyl, C₁-C₆alkoxycarbonyl, halogeno-C₁-C₆alkoxycarbonyl, C₁-C₆alkylaminocarbonyl, C₁-C₄alkoxyiminomethyl, di(C₁-C₆alkyl)aminocarbonyl, where the alkyl groups can be identical or different; C₁-C₆alkylaminothiocarbonyl, di(C₁-C₆alkyl)aminothiocarbonyl, where the alkyl groups can be identical or different; C₁-C₆alkylamino, di(C₁-C₆alkyl)amino, where the alkyl groups can be identical or different; halogen, NO₂, CN, SF₅, thioamido, thiocyanatomethyl, trimethylsilyl; an unsubstituted or mono- to tetrasubstituted C₁-C₄alkylenedioxy group, where the substituents are chosen from the group consisting of C₁-C₄alkyl and halogen; aryl-Q-C₁-C₆alkyl, aryl-Q-C₂-C₆alkenyl, heterocyclyl-Q-C₁-C₆alkyl, heterocyclyl-Q-C₂-C₆alkenyl, or aryl-Q-C₁-C₆alkyl, aryl-Q-C₂-C₆alkenyl, heterocyclyl-Q-C₁-C₆alkyl or heterocyclyl-Q-C₂-C₆alkenyl which are mono- to pentasubstituted in the aryl or heterocyclyl ring, depending on the possibility of substitution, where the substituents independently of one another are chosen from the group consisting of halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, CN, nitro, OC(=O)-C₁-C₆alkyl, OH, NH₂ and C₁-C₆alkoxycarbonyl;

- 3 -

where, if q is greater than 1, the radicals R_5 can be identical or different;

Q is a direct bond, $-\text{CH}(\text{OH})-$, $-\text{C}(=\text{O})-$ or $-\text{S}(=\text{O})_v-$;

v is 0, 1 or 2;

R_{10} is H, $\text{C}_1\text{-C}_6\text{alkyl}$, $\text{C}_2\text{-C}_6\text{alkenyl}$, $\text{C}_2\text{-C}_6\text{alkynyl}$, $\text{C}_3\text{-C}_6\text{cycloalkyl}$; or $\text{C}_1\text{-C}_6\text{alkyl}$, $\text{C}_2\text{-C}_6\text{alkenyl}$, $\text{C}_2\text{-C}_6\text{alkynyl}$ or $\text{C}_3\text{-C}_6\text{cycloalkyl}$ -, which are mono- or polysubstituted by substituents from the group consisting of halogen; $-\text{Si}(\text{C}_1\text{-C}_4\text{alkyl})_3$, where the alkyl groups can be identical or different; $\text{C}_1\text{-C}_6\text{alkoxycarbonyl}$, or an aryl or heterocyclyl group which are unsubstituted or mono- or polysubstituted by substituents from the group consisting of halogen, $\text{C}_1\text{-C}_4\text{alkyl}$ and halogeno- $\text{C}_1\text{-C}_4\text{alkyl}$, and

p is 0, 1 or 2; and

(B) either

(I) n is 1 or 2 and q is 1, 2, 3 or, when n is 1, 4; and

A, G, X, Y, Z, R_1 , R_2 , R_3 , R_4 , R_5 , R_7 and R_9 are as defined above under (A); or

(II) n is 0;

q is 2, 3, 4 or 5; and

A, X, Y, Z, R_2 , R_3 , R_4 , R_5 , R_7 and R_9 are as defined above under (A); and the radicals R_5 can be identical or different; with the proviso that if

q is 2, $(R_5)_2$ is not dichloro or dimethyl, and with the further proviso that R_2 is not CH_3 if AR_7 is CH_3 and $(R_5)_2$ is 3-fluoro, 5- CF_3 or, together, 3,4-methylenedioxy and R_3 and R_4 are H; or

(III) n is 0;

q is 1;

A, X, Y, Z, R_2 , R_3 , R_4 , R_7 and R_9 are as defined above under (A); and

R_6 is tert-butyl, $\text{C}_5\text{-C}_6\text{alkyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkyl}$, with the exception of CF_3 ;

$\text{C}_3\text{-C}_6\text{cycloalkyl}$, halogeno- $\text{C}_3\text{-C}_6\text{cycloalkyl}$, $\text{C}_5\text{-C}_6\text{alkoxy}$, halogeno- $\text{C}_3\text{-C}_6\text{alkoxy}$, $\text{C}_2\text{-C}_6\text{alkylthio}$, halogeno- $\text{C}_1\text{-C}_6\text{alkylthio}$, $\text{C}_1\text{-C}_6\text{alkylsulfinyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkylsulfinyl}$, $\text{C}_2\text{-C}_6\text{alkylsulfonyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkylsulfonyl}$, $\text{C}_1\text{-C}_6\text{alkylsulfonyloxy}$, halogeno- $\text{C}_1\text{-C}_6\text{alkylsulfonyloxy}$, $\text{C}_1\text{-C}_6\text{alkoxy-C}_1\text{-C}_6\text{alkyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkoxy-C}_1\text{-C}_6\text{alkyl}$, $\text{C}_1\text{-C}_6\text{alkylthio-C}_1\text{-C}_6\text{alkyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkylthio-C}_1\text{-C}_6\text{alkyl}$, $\text{C}_1\text{-C}_6\text{alkylsulfinyl-C}_1\text{-C}_6\text{alkyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkylsulfinyl-C}_1\text{-C}_6\text{alkyl}$, $\text{C}_1\text{-C}_6\text{alkylsulfonyl-C}_1\text{-C}_6\text{alkyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkylsulfonyl-C}_1\text{-C}_6\text{alkyl}$, $\text{C}_1\text{-C}_6\text{alkylcarbonyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkylcarbonyl}$, $\text{C}_2\text{-C}_6\text{alkoxycarbonyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkoxycarbonyl}$, $\text{C}_2\text{-C}_6\text{alkylaminocarbonyl}$, $\text{C}_1\text{-C}_4\text{alkoxyiminomethyl}$, $\text{di}(\text{C}_2\text{-C}_6\text{alkyl})\text{aminocarbonyl}$, where the alkyl groups can be identical or different; $\text{C}_1\text{-C}_6\text{alkylaminothio-carbonyl}$,

di(C₁-C₆alkyl)aminothiocarbonyl, where the alkyl groups can be identical or different; C₂-C₆alkylamino, di(C₂-C₆alkyl)amino, where the alkyl groups can be identical or different; SF₅, thiocyanatomethyl, trimethylsilyl, aryl-Q-C₁-C₆alkyl, aryl-Q-C₂-C₆alkenyl, heterocyclyl-Q-C₁-C₆alkyl, heterocyclyl-Q-C₂-C₆alkenyl; or aryl-Q-C₁-C₆alkyl, aryl-Q-C₂-C₆alkenyl, heterocyclyl-Q-C₁-C₆alkyl or heterocyclyl-Q-C₂-C₆alkenyl which are mono- to pentasubstituted in the aryl or heterocyclyl ring, depending on the possibility of substitution, where the substituents independently of one another are chosen from the group consisting of halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, CN, nitro and C₁-C₆alkoxycarbonyl;

Q is a direct bond, -CH(OH)-, -C(=O)- or -S(=O)_v;

v is 0, 1 or 2; or

(IV) n is 1 and

q is 0;

A, X, Y, Z, R₂, R₃, R₄, R₇ and R₈ are as defined above under (A);

G is O; and

R is n-propyl, n-butyl, sec-butyl, isobutyl, C₃-C₆cycloalkyl, C₃-C₆cycloalkyl-C₁-C₄alkyl, halogeno-C₄-C₆cycloalkyl-C₁-C₄alkyl, C₁-C₄alkylenyl-C₃-C₆cycloalkyl, C₁-C₄alkylenyl-halogeno-C₃-C₆cycloalkyl, CH₂Si(C₁-C₄alkyl)₃, where the alkyl groups can be identical or different; a substituted aryl or benzyl, where the substituents of the aryl or benzyl independently of one another are chosen from the group consisting of C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, C₁-C₆alkylthio, halogeno-C₁-C₆alkylthio, phenoxy, CN and nitro; or a phenyl radical which is monosubstituted on two adjacent C atoms by an unsubstituted or mono- to tetrasubstituted C₁-C₄alkylenedioxy group, where the substituents are selected from the group consisting of C₁-C₄alkyl and halogen; with the proviso that OR is not n-propyloxy or -OCH₂Si(CH₃)₃ in the 4-position if X is CH, Y is OCH₃, Z is O, AR₇ is CH₃, R₂ is CH₃ and R₃ and R₄ are H; and with the further proviso that R is not phenyl which is substituted by fluorine or chlorine in the 4-position or benzyl which is substituted by methyl or methoxy in the 4-position or monosubstituted by fluorine, chlorine, bromine or CF₃ in the 2-, 3- or 4-position if OR is in the p-position, AR₇ is CH₃, R₂ is CH₃ and R₃ and R₄ are H; or

(V) n is 1;

q is 0;

A, X, Y, Z, R, R₂, R₃, R₄, R₇ and R₉ are as defined above under (A); and

G is S;

with the proviso that R is not methyl if R₂ is methyl; or

(VI) n is 1;

q is 0;

A, G, X, Y, Z, R₂, R₃, R₄ and R₉ are as defined above under (A);

A is a direct bond, C₇-C₁₀alkylene, -C(=O)-, -C(=S)- or halogeno-C₁-C₁₀alkylene and R₇ is a radical R₁₀; or

A is C₁-C₁₀alkylene, -C(=O)-, -C(=S)- or halogeno-C₁-C₁₀alkylene; and

R₇ is CN, O(C₁-C₄alkyl)₂, or N(C₁-C₄alkyl)₂, in which the two alkyl radicals can be identical or different, OR₁₀, N(R₁₀)₂, where the radicals R₁₀ can be identical or different, or -S(=O)_pR₁₀;

R₁₀ is H; or C₅-C₈alkenyl, C₄-C₈alkynyl, C₃-C₆cycloalkyl; or C₁-C₆alkyl, C₂-C₆alkenyl, C₂-C₆alkynyl or C₃-C₆cycloalkyl which are mono- or polysubstituted by substituents from the group consisting of halogen; -Si(C₁-C₄alkyl)₃, where the alkyl groups can be identical or different; C₁-C₆alkoxycarbonyl, or an aryl or heterocyclyl group which are unsubstituted or mono- or polysubstituted by substituents from the group consisting of halogen, C₁-C₄alkyl and halogeno-C₁-C₄alkyl; and

R is methyl, ethyl, t-butyl, or mono- or polysubstituted methyl, ethyl or t-butyl, where the substituents independently of one another are chosen from the group consisting of halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, C₁-C₆alkylthio, halogeno-C₁-C₆alkylthio, phenoxy, CN and nitro; or a phenyl radical which is monosubstituted on two adjacent C atoms by an unsubstituted or mono- to tetrasubstituted C₁-C₄alkylenedioxy group, where the substituents are selected from the group consisting of C₁-C₄alkyl and halogen; or CH₂Si(C₁-C₄alkyl)₃, where the alkyl groups can be identical or different; or

(VII) n is 1;

q is 0;

A, G, X, Y, Z, R₂, R₃, R₄, R₇ and R₉ are as defined above under (A); and

R is C₂-C₄alkenyl or C₂-C₄alkynyl which are substituted or unsubstituted, and where the substituents independently of one another are chosen from the group consisting of halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, C₁-C₆alkylthio, halogeno-C₁-C₆alkylthio, phenoxy,

- 6 -

CN and nitro, with the proviso that AR_7 is not methyl if R_2 is methyl, R_3 and R_4 are H and G is oxygen;

and, where appropriate, their possible E/Z isomers, E/Z isomer mixtures and/or tautomers, in each case in the free form or in salt form, a process for the preparation and the use of these compounds, E/Z isomers and tautomers, pesticides, the active compound of which is chosen from these compounds, E/Z isomers and tautomers, and a process for the preparation and the use of these agents, intermediate products, and, where appropriate, their possible E/Z isomers, E/Z isomer mixtures and/or tautomers, in the free form or in salt form, for the preparation of these compounds, where appropriate tautomers, in the free form or in salt form, of these intermediate products and a process for the preparation and the use of these intermediate products and their tautomers.

A preferred compound of the formula (I) is that in which either

X is CH or N, Y is OR_1 and Z is O, or

X is N, Y is NHR_6 and Z is O, S or $S(=O)$;

R_1 is C_1 - C_4 alkyl;

R_2 is H, C_1 - C_4 alkyl, halogeno- C_1 - C_4 alkyl, C_3 - C_6 cycloalkyl, C_1 - C_4 alkoxymethyl, C_1 - C_4 alkoxy, halogeno- C_1 - C_4 alkoxy, C_1 - C_4 alkylthio, halogeno- C_1 - C_4 alkylthio or CN;

R_3 and R_4 independently of one another are H, C_1 - C_4 alkyl, C_1 - C_4 alkoxy, OH, CN, NO_2 , a $(C_1$ - C_4 alkyl) $_3$ -Si group, where the alkyl groups can be identical or different, halogen, $(C_1$ - C_4 alkyl) $S(=O)_m$, (halogeno- C_1 - C_4 alkyl) $S(=O)_m$, halogeno- C_1 - C_4 alkyl or halogeno- C_1 - C_4 alkoxy;

R_6 is H or C_1 - C_4 alkyl;

R_9 is methyl, fluoromethyl or difluoromethyl;

m is 0, 1 or 2; n is 0 or 1; q is 0, 1, 2, 3 or 4 or, if n is 0, 5; either

A is a direct bond, C_1 - C_{10} alkylene, $-C(=O)-$, $-C(=S)-$ or halogeno- C_1 - C_{10} alkylene and

R_7 is a radical R_{10} ; or

A is C_1 - C_{10} alkylene, $-C(=O)-$, $-C(=S)-$ or halogeno- C_1 - C_{10} alkylene and

R_7 is $-CN$, OR_{10} , $N(R_{10})_2$, where the radicals R_{10} can be identical or different, or $-S(=O)_pR_{10}$; preferably OR_{10} , $N(R_{10})_2$, where the radicals R_{10} can be identical or different, or $-S(=O)_pR_{10}$;

R is a substituted or unsubstituted C_1 - C_4 alkyl or aryl group, where the substituents are chosen from the group consisting of halogen, C_1 - C_4 alkyl, halogeno- C_1 - C_4 alkyl,

- 7 -

C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, CN and nitro;

R₅ is C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, C₁-C₆alkylthio, halogeno-C₁-C₆alkylthio, C₁-C₆alkylsulfinyl, halogeno-C₁-C₆alkylsulfinyl, C₁-C₆alkylsulfonyl, halogeno-C₁-C₆alkylsulfonyl, C₁-C₆alkoxy-C₁-C₆alkyl, halogeno-C₁-C₆alkoxy-C₁-C₆alkyl, C₁-C₆alkylthio-C₁-C₆alkyl, halogeno-C₁-C₆alkylthio-C₁-C₆alkyl, C₁-C₆alkylsulfinyl-C₁-C₆alkyl, halogeno-C₁-C₆alkylsulfinyl-C₁-C₆alkyl, C₁-C₆alkylsulfonyl-C₁-C₆alkyl, halogeno-C₁-C₆alkylsulfonyl-C₁-C₆alkyl, C₁-C₆alkylcarbonyl, halogeno-C₁-C₆alkylcarbonyl, C₁-C₆alkoxycarbonyl, halogeno-C₁-C₆alkoxycarbonyl, C₁-C₆alkylaminocarbonyl, C₁-C₄alkoxyiminomethyl, di(C₁-C₆alkyl)aminocarbonyl, where the alkyl groups can be identical or different; C₁-C₆alkylaminothiocarbonyl, di(C₁-C₆alkyl)aminothiocarbonyl, where the alkyl groups can be identical or different, C₁-C₆alkylamino, di(C₁-C₆alkyl)amino, where the alkyl groups can be identical or different, halogen, NO₂, CN, SF₅, thioamido, thiocyanatomethyl, trimethylsilyl or an unsubstituted or mono- to tetrasubstituted C₁-C₄alkylenedioxy group, where the substituents are chosen from the group consisting of C₁-C₄alkyl and halogen, and where, if q is greater than 1, the radicals R₅ can be identical or different;

R₁₀ is H, C₁-C₆alkyl which is unsubstituted or mono- or polysubstituted by substituents from the group consisting of halogen, C₃-C₆cycloalkyl which is unsubstituted or mono- or polysubstituted by substituents from the group consisting of halogen, C₂-C₆alkenyl which is unsubstituted or mono- or polysubstituted by substituents from the group consisting of halogen, C₂-C₆alkynyl which is unsubstituted or mono- or polysubstituted by substituents from the group consisting of halogen, -Si(C₁-C₄alkyl)₃, where the alkyl groups can be identical or different, C₁-C₆alkoxycarbonyl or an aryl or heterocyclyl group which is unsubstituted or mono- or polysubstituted by substituents from the group consisting of halogen, C₁-C₄alkyl and halogeno-C₁-C₄alkyl; and

G is O;

p is 0, 1 or 2;

with the proviso that R₇ is other than H if A is methylene, and with the further proviso that R₇ is other than methyl if A is a direct bond;

or A-R₇ is CH₃ and either

- R_5 is halogen, C_1 - C_6 alkyl, halogeno- C_1 - C_6 alkyl, C_3 - C_6 cycloalkyl, halogeno- C_3 - C_6 cycloalkyl or $Si(C_1$ - C_4 alkyl) $_3$, where the alkyl groups can be identical or different, and where the radicals R_5 are different;
- q is 2, 3, 4 or 5; and n is 0; or
- R_5 is C_4 - C_6 alkyl, C_3 - C_6 cycloalkyl, halogeno- C_3 - C_6 cycloalkyl or $Si(C_1$ - C_4 alkyl) $_3$, where the alkyl groups can be identical or different;
- q is 1; and n is 0; or
- R is n -propyl, n -butyl, sec -butyl, isobutyl, C_1 - C_4 alkylenyl- C_3 - C_6 cycloalkyl, C_1 - C_4 alkylenyl-halogeno- C_3 - C_6 cycloalkyl, $CH_2Si(C_1$ - C_4 alkyl) $_3$, where the alkyl groups can be identical or different, or a substituted phenyl or benzyl group, where the substituents are chosen from the group consisting of halogen, C_1 - C_4 alkyl and halogeno- C_1 - C_4 alkyl;
- R_5 is halogen;
- q is 0, 1, 2, 3 or 4; and n is 1.

A compound of the formula (I) which is furthermore preferred is that in which either

- X is CH or N; Y is OR_1 and Z is O; or
- X is N; Y is NHR_1 and Z is O, S or $S(=O)$;
- R_1 is C_1 - C_4 alkyl;
- R_2 is H, C_1 - C_4 alkyl, halogeno- C_1 - C_4 alkyl, C_3 - C_6 cycloalkyl, C_1 - C_4 alkoxymethyl, C_1 - C_4 alkoxy, halogeno- C_1 - C_4 alkoxy, C_1 - C_4 alkylthio, halogeno- C_1 - C_4 alkylthio or CN;
- R_3 and R_4 independently of one another are H, C_1 - C_4 alkyl, C_1 - C_4 alkoxy, OH, CN, NO_2 , a $(C_1$ - C_4 alkyl) $_3$ -Si group, where the alkyl groups can be identical or different, halogen, $(C_1$ - C_4 alkyl) $S(=O)_m$, (halogeno- C_1 - C_4 alkyl) $S(=O)_m$, halogeno- C_1 - C_4 alkyl or halogeno- C_1 - C_4 alkoxy;
- R_6 is H or C_1 - C_4 alkyl;
- R_9 is methyl, fluoromethyl or difluoromethyl;
- m is 0, 1 or 2; n is 0 or 1; q is 0, 1, 2, 3, 4 or, if n is 0, 5;
- G is O; and
- (a) A is a direct bond, C_1 - C_{10} alkylene, $-C(=O)-$, $-C(=S)-$ or halogeno- C_1 - C_{10} alkylene and R_7 is a radical R_{10} ; or
- (b) A is C_1 - C_{10} alkylene, $-C(=O)-$, $-C(=S)-$ or halogeno- C_1 - C_{10} alkylene and R_7 is $-CN$, OR_{10} , $N(R_{10})_2$, where the radicals R_{10} can be identical or different, or $-S(=O)_pR_{10}$; and in the groups (I) and (II).

- R is an unsubstituted or mono- or polysubstituted C₁-C₄alkyl, C₂-C₄alkenyl, C₂-C₄alkynyl, benzyl or aryl group, where the substituents are chosen from the group consisting of halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, C₁-C₆alkylthio, halogeno-C₁-C₆alkylthio, phenoxy, CN and nitro; or CH₂Si(C₁-C₄alkyl)₃, where the alkyl groups can be identical or different; or a phenyl radical which is monosubstituted on two adjacent C atoms by a -O-CH₂-O- group; and
- R₅ is C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, C₁-C₆alkylthio, halogeno-C₁-C₆alkylthio, C₁-C₆alkylsulfinyl, halogeno-C₁-C₆alkylsulfinyl, C₁-C₆alkylsulfonyl, halogeno-C₁-C₆alkylsulfonyl, C₁-C₆alkylsulfonyloxy, halogeno-C₁-C₆alkylsulfonyloxy, C₁-C₆alkoxy-C₁-C₆alkyl, halogeno-C₁-C₆alkoxy-C₁-C₆alkyl, C₁-C₆alkylthio-C₁-C₆alkyl, halogeno-C₁-C₆alkylthio-C₁-C₆alkyl, C₁-C₆alkylsulfinyl-C₁-C₆alkyl, halogeno-C₁-C₆alkylsulfinyl-C₁-C₆alkyl, C₁-C₆alkylsulfonyl-C₁-C₆alkyl, halogeno-C₁-C₆alkylsulfonyl-C₁-C₆alkyl, C₁-C₆alkylcarbonyl, halogeno-C₁-C₆alkylcarbonyl, C₁-C₆alkoxycarbonyl, halogeno-C₁-C₆alkoxycarbonyl, C₁-C₆alkylaminocarbonyl, C₁-C₄alkoxyiminomethyl, di(C₁-C₆alkyl)aminocarbonyl, where the alkyl groups can be identical or different, C₁-C₆alkylaminothiocarbonyl, di(C₁-C₆alkyl)aminothiocarbonyl, where the alkyl groups can be identical or different, C₁-C₆alkylamino, di(C₁-C₆alkyl)amino, where the alkyl groups can be identical or different, halogen, NO₂, CN, SF₅, thioamido, thiocyanatomethyl, trimethylsilyl, an unsubstituted or mono- to tetrasubstituted C₁-C₄alkylenedioxy group, where the substituents are chosen from the group consisting of C₁-C₄alkyl and halogen; aryl-Q-C₁-C₆alkyl, aryl-Q-C₂-C₆alkenyl, heterocyclyl-Q-C₁-C₆alkyl, heterocyclyl-Q-C₂-C₆alkenyl, or aryl-Q-C₁-C₆alkyl, aryl-Q-C₂-C₆alkenyl, heterocyclyl-Q-C₁-C₆alkyl or heterocyclyl-Q-C₂-C₆alkenyl which are mono- to pentasubstituted in the aryl or heterocyclyl ring, depending on the possibility of substitution, where the substituents independently of one another are chosen from the group consisting of halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, CN, nitro and C₁-C₆alkoxycarbonyl;
- and where, if q is greater than 1, the radicals R₅ can be identical or different;
- Q is a direct bond, -CH(OH)-; -C(=O)- or -S(=O)₂-; preferably a direct bond, -CH(OH)- or -C(=O)-,

v is 0, 1 or 2;

R₁₀ is H, C₁-C₆alkyl which is unsubstituted or mono- or polysubstituted by substituents from the group consisting of halogen, C₃-C₆cycloalkyl which is unsubstituted or mono- or polysubstituted by substituents from the group consisting of halogen, C₂-C₆alkenyl which is unsubstituted or mono- or polysubstituted by substituents from the group consisting of halogen, C₂-C₆alkynyl which is unsubstituted or mono- or polysubstituted by substituents from the group consisting of halogen, -Si(C₁-C₄alkyl)₃, where the alkyl groups can be identical or different, C₁-C₆alkoxycarbonyl or an aryl or heterocyclyl group which is unsubstituted or mono- or polysubstituted by substituents from the group consisting of halogen, C₁-C₄alkyl and halogeno-C₁-C₄alkyl, and

p is 0, 1 or 2;

with the proviso that A-R₇ is other than CH₃; or

A-R₇ in the following groups (c) to (k) is CH₃ and X, Y, Z, R₁, R₂, R₃, R₄, R₆, R₉ and m are as defined above under (C), and either

(c) R₅ is halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl or Si(C₁-C₄alkyl)₃, where the alkyl groups can be identical or different, and where the radicals R₅ are different;

q is 2, 3, 4 or 5; and n is 0; or

(d) R₅ is C₄-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl or Si(C₁-C₄alkyl)₃, where the alkyl groups can be identical or different;

q is 1; and n is 0; or

(e) R is n-propyl, n-butyl, sec-butyl, isobutyl, C₃-C₆cycloalkyl, C₃-C₆cycloalkyl-C₁-C₄alkyl, halogeno-C₃-C₆cycloalkyl-C₁-C₄alkyl, C₁-C₄alkylenyl-C₃-C₆cycloalkyl, C₁-C₄alkylenyl-halogeno-C₃-C₆cycloalkyl, CH₂Si(C₁-C₄alkyl)₃, where the alkyl groups can be identical or different, or a substituted phenyl or benzyl group, where the substituents are chosen from the group consisting of halogen, C₁-C₄alkyl and halogeno-C₁-C₄alkyl;

R₅ is halogen;

q is 0, 1, 2, 3 or 4; and n is 1;

with the proviso that OR is not m-CF₃-benzyloxy in the p-position if X is CH, Y is OCH₃, Z is O, R₂ is CH₃, R₃ and R₄ are hydrogen, R₆ is CH₃, n is 1 and q is 0; or

(f) R is an unsubstituted or mono- or polysubstituted C₁-C₄alkyl, C₂-C₄alkenyl, C₂-C₄alkynyl, benzyl or aryl group, where the substituents are chosen from the group consisting of halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, C₁-C₆alkylthio, halogeno-

C₁-C₆alkylthio, CN and nitro; or -CH₂Si(C₁-C₄alkyl)₃, where the alkyl groups can be identical or different; or a phenyl radical which is monosubstituted on to two adjacent C atoms by a -O-CH₂-O- group;

R₅ is aryl-Q-C₁-C₆alkyl, aryl-Q-C₁-C₆alkenyl, heterocyclyl-Q-C₁-C₆alkyl, heterocyclyl-Q-C₂-C₆alkenyl, or aryl-Q-C₁-C₆alkyl, aryl-Q-C₂-C₆alkenyl, heterocyclyl-Q-C₁-C₆alkyl or heterocyclyl-Q-C₂-C₆alkenyl which are mono- to pentasubstituted in the aryl or heterocyclyl ring, depending on the possibility of substitution, where the substituents independently of one another are chosen from the group consisting of halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, CN, nitro and C₁-C₆alkoxycarbonyl;

where, if q is greater than 1, the radicals R₅ can be identical or different;

Q is a direct bond, -CH(OH)-; or -C(=O)-;

q is 1, 2, 3 or 4; and n is 0 or 1, where if

q is 2, 3 or 4, one or more of the radicals R₅ also independently of one another can be C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, C₁-C₆alkylthio, halogeno-C₁-C₆alkylthio, C₁-C₆alkylsulfinyl, halogeno-C₁-C₆alkylsulfinyl, C₁-C₆alkylsulfonyl, halogeno-C₁-C₆alkylsulfonyl, C₁-C₆alkoxy-C₁-C₆alkyl, halogeno-C₁-C₆alkoxy-C₁-C₆alkyl, C₁-C₆alkylthio-C₁-C₆alkyl, halogeno-C₁-C₆alkylthio-C₁-C₆alkyl, C₁-C₆alkylsulfinyl-C₁-C₆alkyl, halogeno-C₁-C₆alkylsulfinyl-C₁-C₆alkyl, C₁-C₆alkylsulfonyl-C₁-C₆alkyl, halogeno-C₁-C₆alkylsulfonyl-C₁-C₆alkyl, C₁-C₆alkylcarbonyl, halogeno-C₁-C₆alkylcarbonyl, C₁-C₆alkoxycarbonyl, halogeno-C₁-C₆alkoxycarbonyl, C₁-C₆alkylaminocarbonyl, C₁-C₄alkoxyiminomethyl, di(C₁-C₆alkyl)aminocarbonyl, where the alkyl groups can be identical or different, C₁-C₆alkylaminothiocarbonyl, di(C₁-C₆alkyl)aminothiocarbonyl, where the alkyl groups can be identical or different, C₁-C₆alkylamino, di(C₁-C₆alkyl)amino, where the alkyl groups can be identical or different, halogen, NO₂, CN, SF₅, thioamido, thiocyanatomethyl, trimethylsilyl or a C₁-C₄alkylenedioxy group which is unsubstituted or mono- to tetrasubstituted, where the substituents are chosen from the group consisting of C₁-C₄alkyl and halogen; or

(g) R is C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl or an unsubstituted or mono- or poly-substituted phenyl or benzyl group, where the substituents are chosen from the group consisting of halogen, C₁-C₄alkyl and halogeno-C₁-C₄alkyl,

- R_5 is C_1 - C_6 alkyl, C_1 - C_6 alkoxy, halogeno- C_1 - C_6 alkyl or halogeno- C_1 - C_6 alkoxy;
q is 1 and n is 1, or
(h) R is C_3 - C_6 cycloalkyl- C_1 - C_4 alkyl or halogeno- C_3 - C_6 cycloalkyl- C_1 - C_4 alkyl,
 R_5 is C_1 - C_6 alkyl, C_1 - C_6 alkoxy, halogeno- C_1 - C_6 alkyl or halogeno- C_1 - C_6 alkoxy;
q is 1 and n is 1, or
(i) R is methyl, ethyl, isopropyl or tert-butyl;
 R_5 is C_1 - C_6 alkyl, C_1 - C_6 alkoxy, halogeno- C_1 - C_6 alkyl, halogeno- C_1 - C_6 alkoxy or halogen;
q is 1; and n is 1; or
(k) R is n-propyl;
 R_5 is C_1 - C_6 alkyl or C_1 - C_6 alkoxy;
q is 1; and n is 1;

and, where appropriate, its possible E/Z isomers, E/Z isomer mixtures and/or tautomers, in each case in the free form or in salt form.

Certain methoxyacrylic acid derivatives are proposed as active compounds in pesticides in the literature. However, the biological properties of these known compounds are not completely satisfactory in the field of pest control, and for this reason there is the need to provide further compounds having pest control properties, in particular for control of insects and representatives of the order Acarina, and in particular for control of phytopathogenic microorganisms, this object being achieved according to the invention by providing the present compounds of the formula (I).

Some of the compounds of the formula (I) and of the formulae (III), (IV) and (VI) defined below contain asymmetric carbon atoms, which means that the compounds can occur in an optically active form. Because of the presence of the C=X and the oximino double bonds, the compounds can occur in the E and Z isomer forms. Atropisomers of the compounds can furthermore occur. The formulae (I), (III), (IV) and (VI) are intended to include all these possible isomeric forms and mixtures thereof, for example racemates or E/Z isomer mixtures, and, where appropriate, the salts thereof, even though this is not mentioned specifically each time.

Unless defined otherwise, the general terms used above and below are as defined below.

Unless defined otherwise, carbon-containing groups and compounds in each case contain 1 up to and including 8, preferably 1 up to and including 6, in particular 1 up to and including 4, especially 1 or 2, carbon atoms.

Alkyl - as a group per se and as a structural element of other groups and compounds, such as of halogenoalkyl, alkoxy, alkylthio, alkylsulfinyl, alkylsulfonyl, alkylcarbonyl, alkoxy-carbonyl, alkylamino, alkoxyiminomethyl, alkylaminocarbonyl and alkylaminothiocarbonyl - is, in each case under due consideration of the number, embraced from case to case, of the carbon atoms contained in the corresponding group or compound, either straight-chain, i.e. methyl, ethyl, propyl, butyl, pentyl or hexyl, or branched, for example isopropyl, isobutyl, sec-butyl, tert-butyl, isopentyl, neopentyl or isohexyl.

Alkenyl - as a group per se and as a structural element of other groups and compounds, such as of halogenoalkenyl - is, in each case under due consideration of the number, embraced from case to case, of the carbon atoms contained in the corresponding group or compound, either straight-chain, for example vinyl, 1-methylvinyl, allyl, 1-butenyl or 2-hexenyl, or branched, for example isopropenyl.

Alkynyl - as a group per se and as a structural element of other groups and compounds, such as of halogenoalkynyl - is, in each case under due consideration of the number, embraced from case to case, of the carbon atoms contained in the corresponding group or compound, either straight-chain, for example propargyl, 2-butylnyl or 5-hexynyl, or branched, for example 2-ethynylpropyl or 2-propargylisopropyl.

C₃-C₆cycloalkyl is cyclopropyl, cyclobutyl, cyclopentyl or cyclohexyl.

Alkylene - as a group per se and as a structural element of other groups and compounds, such as of halogenoalkylene - is, in each case under due consideration of the number, embraced from case to case, of carbon atoms contained in the corresponding group or compound, either straight-chain, for example -CH₂CH₂-, -CH₂CH₂CH₂- or -CH₂CH₂CH₂CH₂-, or branched, for example -CH(CH₃)-, -CH(C₂H₅)-, -C(CH₃)₂-, -CH(CH₃)CH₂- or -CH(CH₃)CH(CH₃)-.

Aryl is phenyl or naphthyl, in particular phenyl.

Heterocyclyl is a 5- to 7-membered aromatic or non-aromatic ring having 1 to 3 hetero-atoms, which are chosen from the group consisting of N, O and S. Aromatic 5- and 6-membered rings which contain a nitrogen atom as the heteroatom and if appropriate a further heteroatom, preferably nitrogen or sulfur, in particular nitrogen, are preferred. Preferred heteroaryl radicals in the radical R₅ are -pyrazinyl, -pyrid-3'-yl, -pyrid-2'-yl, -pyrid-4'-yl, -pyrimidin-2'-yl, -pyrimidin-4'-yl, -pyrimidin-5'-yl, -thiazol-2'-yl, -oxazol-2'-yl, -thien-2'-yl, -thien-3'-yl and -thiazol-2'-yl.

Halogen - as a group per se and as a structural element of other groups and compounds, such as of halogenoalkyl, halogenoalkenyl and halogenoalkynyl - is fluorine, chlorine, bromine or iodine, in particular fluorine, chlorine or bromine, especially fluorine or chlorine, and very particularly fluorine.

Halogen-substituted carbon-containing groups and compounds, such as halogenoalkyl, halogenoalkenyl or halogenoalkynyl, can be partly halogenated or perhalogenated, and in the case of polyhalogenation, the halogen substituents can be identical or different.

Examples of halogenoalkyl - as a group per se and as a structural element of other groups and compounds, such as of halogenoalkenyl - are methyl which is mono- to trisubstituted by fluorine, chlorine and/or bromine, such as CHF_2 or CF_3 ; ethyl which is mono- to penta-substituted by fluorine, chlorine and/or bromine, such as CH_2CF_3 , CF_2CF_3 , CF_2CCl_3 , CF_2CHCl_2 , CF_2CHF_2 , CF_2CFCl_2 , CF_2CHBr_2 , CF_2CHClF , CF_2CHBrF or CClFCHClF ; propyl or isopropyl which is mono- to heptasubstituted by fluorine, chlorine and/or bromine, such as $\text{CH}_2\text{CHBrCH}_2\text{Br}$, $\text{CF}_2\text{CHFCH}_2\text{F}$, $\text{CH}_2\text{CF}_2\text{CF}_3$ or $\text{CH}(\text{CF}_3)_2$; and butyl or one of its isomers which is mono- to nonasubstituted by fluorine, chlorine and/or bromine, such as $\text{CF}(\text{CF}_3)\text{CHFCH}_2\text{F}$ or $\text{CH}_2(\text{CF}_2)_2\text{CF}_3$. Halogenoalkenyl is, for example, $\text{CH}_2\text{CH}=\text{CHCl}$, $\text{CH}_2\text{CH}=\text{CCl}_2$, $\text{CH}_2\text{CF}=\text{CF}_2$ or $\text{CH}_2\text{CH}=\text{CHCH}_2\text{Br}$. Halogenoalkynyl is, for example, $\text{CH}_2\text{C}\equiv\text{CF}$, $\text{CH}_2\text{C}\equiv\text{CCH}_2\text{Cl}$ or $\text{CF}_2\text{CF}_2\text{C}\equiv\text{CCH}_2\text{F}$.

Some compounds of the formula (I) and of the formulae (III), (IV) and (VI) defined below can, as is familiar to the expert, exist as tautomers, in particular if R_7 is H. The compounds of the formulae (I), (III), (IV) and (VI) above and below are therefore to be understood as also meaning corresponding tautomers, although the latter are not mentioned specifically in each case.

Compounds of the formula (I) and of the formulae (III), (IV) and (VI) defined below which have at least one basic centre can form, for example, acid addition salts. These are formed, for example, with strong inorganic acids, such as mineral acids, for example perchloric acid, sulfuric acid, nitric acid, nitrous acid, a phosphoric acid or a hydrogen halide acid, with strong organic carboxylic acids, such as C_1 - C_4 alkanecarboxylic acids which are unsubstituted or substituted, for example by halogen, for example acetic acid, such as saturated or unsaturated dicarboxylic acids, for example oxalic, malonic, succinic, maleic, fumaric or phthalic acid, such as hydroxycarboxylic acids, for example ascorbic, lactic, malic, tartaric or citric acid, or such as benzoic acid, or with organic sulfonic acids, such as C_1 - C_4 alkane- or

arylsulfonic acids which are unsubstituted or substituted, for example by halogen, for example methane- or p-toluenesulfonic acid. Compounds of the formula (I) with at least one acid group can furthermore form salts with bases. Suitable salts with bases are, for example, metal salts, such as alkali metal or alkaline earth metal salts, for example sodium, potassium or magnesium salts, or salts with ammonia or an organic amine, such as morpholine, piperidine, pyrrolidine, a mono-, di- or tri-lower alkylamine, for example ethyl-, diethyl-, triethyl- or dimethylpropylamine, or a mono-, di- or trihydroxy-lower alkylamine, for example mono-, di- or triethanolamine. Where appropriate, corresponding inner salts can furthermore be formed. Agrochemically advantageous salts are preferred in the context of the invention; However, the invention also relates to salts which have disadvantages for agrochemical uses, for example salts which are toxic to bees or fish, which are employed, for example, for isolation or purification of free compounds of the formula (I) or agrochemically usable salts thereof. As a result of the close relationship between the compounds of the formula (I) in the free form and in the form of their salts, free compounds of the formula (I) or their salts above and below are accordingly and appropriately also to be understood as meaning the corresponding salts or, respectively, free compounds of the formula (I), where appropriate. The same applies to tautomers of compounds of the formulae (I), (III), (IV) and (VI) and salts thereof. In general, in each case the free form is preferred.

Preferred embodiments in the context of the invention - in each case taking into consideration the above provisos - are:

- (1) a compound of the formula (I) in which X is CH;
- (2) a compound of the formula (I), in which Y is OR₁, preferably C₁-C₂alkoxy, in particular methoxy;
- (3) a compound of the formula (I), in which Z is O;
- (4) a compound of the formula (I), in which R₁ is C₁-C₂alkyl;
- (5) a compound of the formula (I), in which R₂ is H, C₁-C₄alkyl, halogeno-C₁-C₄alkyl or C₃-C₆cycloalkyl, preferably C₁-C₄alkyl or halogeno-C₁-C₄alkyl, in particular C₁-C₂alkyl, especially methyl;
- (6) a compound of the formula (I), in which R₃ is H, C₁-C₄alkyl, C₁-C₄alkoxy, OH, CN, NO₂, halogen, halogeno-C₁-C₄alkyl or halogeno-C₁-C₄alkoxy, preferably H, C₁-C₄alkyl,

- C₁-C₄alkoxy or halogen, in particular H, methyl, methoxy, chlorine or fluorine, especially H;
- (7) a compound of the formula (I), in which R₄ is H, C₁-C₄alkyl, C₁-C₄alkoxy, OH, CN, NO₂, halogen, halogeno-C₁-C₄alkyl or halogeno-C₁-C₄alkoxy, preferably H, C₁-C₄alkyl, C₁-C₄alkoxy or halogen, in particular H, methyl, methoxy, chlorine or fluorine, especially H;
- (8) a compound of the formula (I), in which R₅ is H or C₁-C₂alkyl, preferably C₁-C₂alkyl, in particular methyl;
- (9) a compound of the formula (I), in which R₆ is methyl or fluoromethyl, preferably methyl;
- (10) a compound of the formula (I), in which m is 0 or 2, preferably 2;
- (11) a compound of the formula (I), in which n is 1 or 2, preferably 1;
- (12) a compound of the formula (I), in which n is 1 and q is 0;
- (13) a compound of the formula (I), in which AR₇ is ethyl, n is 1 and q is 0;
- (14) a compound of the formula (I), in which AR₇ is methyl, n is 0 and q is 2.
- (15) a compound of the formula (I), in which G is oxygen;
- (16) a compound of the formula (I), in which n is 1 and q is 1 or 2; preferably and n is 1 q is 1;
- (17) a compound of the formula (I), in which A is a direct bond, C₁-C₁₀alkylene, or halogeno-C₁-C₁₀alkylene, preferably a direct bond or C₁-C₄alkylene, in particular a direct bond or methylene, and R₇ is a radical R₁₀;
- (18) a compound of the formula (I), in which AR₇ is C₁-C₄alkyl, C₃alkenyl, which is optionally substituted with chlorine; or C₃alkenyl; preferably methyl or ethyl; in particular ethyl; in particular methyl;
- (19) n is 1, q is 0, and R is a substituted aryl- or benzyl-group, where the substituents are chosen from the group consisting of halogen, C₁-C₄alkyl, halogeno-C₁-C₄alkyl, C₃-C₆cycloalkyl and halogeno-C₃-C₆cycloalkyl, or CH₂Si(CH₃)₃, preferably a substituted phenyl or benzyl group, where the substituents are chosen from the group consisting of halogen, C₁-C₄alkyl and halogeno-C₁-C₄alkoxy, in particular halogen, methyl and halogenomethyl, especially chlorine and trifluoromethyl;
- (20) a compound of the formula (I), in which n is 1, q is 0 and OR is in the para-position;
- (21) a compound of the formula (I), in which A is a direct bond, C₁-C₁₀alkylene, or halogeno-C₁-C₁₀alkylene, preferably a direct bond or C₁-C₄alkylene, in particular a direct bond or methylene; and

R_7 is C_1 - C_4 alkyl which is unsubstituted or mono- to trisubstituted by substituents from the group consisting of hydrogen, C_3 - C_6 cycloalkyl which is unsubstituted or mono- or disubstituted by substituents from the group consisting of halogen, C_2 - C_4 alkenyl which is unsubstituted or mono- or trisubstituted by substituents from the group consisting of halogen, C_2 - C_4 alkynyl which is unsubstituted or mono- or disubstituted by substituents from the group consisting of halogen, $-Si(CH_3)_3$, C_1 - C_4 alkoxycarbonyl, or an aryl group which is unsubstituted or mono- or disubstituted by substituents from the group consisting of halogen, C_1 - C_4 alkyl and halogeno- C_1 - C_4 alkyl, preferably unsubstituted C_1 - C_4 alkyl, cyclopropyl which is disubstituted by substituents from the group consisting of halogen, C_2 - C_3 alkenyl which is disubstituted by substituents from the group consisting of halogen, unsubstituted C_2 - C_3 alkynyl, $-Si(CH_3)_3$,

C_1 - C_4 alkoxycarbonyl, or a phenyl group which is monosubstituted by substituents from the group consisting of halogen, C_1 - C_2 alkyl and halogeno- C_1 - C_4 alkyl, in particular unsubstituted C_1 - C_3 alkyl, cyclopropyl which is disubstituted by chlorine, vinyl which is disubstituted by chlorine, acetylenyl, $-Si(CH_3)_3$, ethoxycarbonyl or trifluoro-phenyl;

- (22) a compound of the formula (I), in which $A-R_7$ is CH_3 , R_5 is halogen, C_1 - C_4 alkyl, C_1 - C_4 alkoxy, halogeno- C_1 - C_4 alkyl, C_3 - C_6 cycloalkyl or $-Si(CH_3)_3$, preferably halogen, C_1 - C_2 alkyl or C_1 - C_4 alkoxy, in particular chlorine, fluorine, methyl or C_1 - C_3 alkoxy; especially fluorine, methyl or C_1 - C_2 alkoxy, and where the radicals R_5 are in each case identical or different, in particular different; and q is 2 or 3, preferably 2; and n is 0;
- (23) a compound of the formula (I), in which $A-R_7$ is CH_3 , R_5 is C_3 - C_6 cycloalkyl, halogeno- C_3 - C_6 cycloalkyl or $-Si(CH_3)_3$, preferably C_3 - C_6 cycloalkyl or $-Si(CH_3)_3$, in particular cyclopropyl or $-Si(CH_3)_3$, and q is 1; and n is 0;
- (24) a compound of the formula (I), in which $A-R_7$ is CH_3 ; R is n -propyl, n -butyl, sec -butyl, isobutyl, C_3 - C_6 cycloalkyl, C_1 - C_2 alkylenyl-halogeno- C_3 - C_6 cycloalkyl or $CH_2Si(CH_3)_3$; preferably n -butyl, sec -butyl, isobutyl or cyclopentyl; and n is 1 and q is 0;
- (25) a compound of the formula (I), in which X is CH ; Y is C_1 - C_2 alkoxy; Z is O ; A is a direct bond or methylene; R_2 and R_9 are methyl; R_3 and R_4 are H ; n is 1; q is 1 or 2; R_7 is a radical R_{10} ; R is a substituted aryl group, where the substituents are chosen from the group consisting of halogen, methyl and halogenomethyl; and R_{10} is H , unsubstituted C_1 - C_4 alkyl, cyclopropyl which is disubstituted by substituents from the group consisting of halogen, C_2 - C_3 alkenyl which is disubstituted by substituents from the group consisting of halogen, unsubstituted C_2 - C_3 alkynyl, $-Si(CH_3)_3$,

- C₁-C₄alkoxycarbonyl, or a phenyl group which is monosubstituted by substituents from the group consisting of halogen, C₁-C₂alkyl and halogeno-C₁-C₄alkyl;
- (26) a compound of the formula (I), in which X is CH; Y is C₁-C₂alkoxy; Z is O; R₂ and R₉ are methyl; R₃ and R₄ are H; n is 0; q is 2; A-R₇ is CH₃; and R₅ is chlorine, fluorine, methyl, halogenomethyl or C₁-C₄alkoxy; especially where the radicals R₅ are different;
- (27) a compound of the formula (I), in which X is CH; Y is C₁-C₂alkoxy; Z is O; R₂ and R₉ are methyl; R₃ and R₄ are H; n is 1; q is 1 or 2; R is a substituted phenyl or benzyl group, where the substituents are chosen from the group consisting of fluorine, chlorine, bromine, methyl and halogenomethyl, and R₅ is fluorine or chlorine;
- (28) a compound of the formula (I), in which n is 0, q is 1, Q is a direct bond and R₅ is phenyl-ethyl, phenyl-ethenyl, heteroaryl-ethyl or heteroaryl-ethenyl, or phenyl-ethyl, phenyl-ethenyl, heteroaryl-ethyl or heteroaryl-ethenyl which is mono- to trisubstituted in the phenyl or heteroaryl ring, depending on the possibility of substitution, where the substituents independently of one another are chosen from the group consisting of fluorine, chlorine, bromine, C₁-C₂alkyl, halogenomethyl, methoxy, halogenomethoxy and C₁-C₂alkoxycarbonyl;
- (29) a compound of the formula (I), in which A-R₇ is methyl or ethyl, R is C₃-C₆cycloalkyl-CH₂- or halogeno-C₃-C₆cycloalkyl-CH₂-, R₅ is C₁-C₂alkyl, C₁-C₂alkoxy or halogen and q is 1 and n is 1;
- (30) a compound of the formula (I), in which A-R₇ is CH₃, R is methyl, ethyl, isopropyl or tert-butyl; R₅ is C₁-C₄alkyl, C₁-C₄alkoxy, fluorine or chlorine; q is 1; and n is 1;
- (31) a compound of the formula (I), in which A-R₇ is CH₃, R is n-propyl; R₅ is C₁-C₄alkyl or C₁-C₄alkoxy; q is 1; and n is 1;
- (32) X is CH; Y is C₁-C₂alkoxy; Z is O; R₂ and R₉ are methyl; R₃ and R₄ are H; n is 1; q is 1 or 2; R is methylenedichlorocyclopropyl or a substituted phenyl or benzyl group, where the substituents are chosen from the group consisting of fluorine, chlorine, bromine, methyl and halogenomethyl; and R₅ is fluorine or chlorine;
- (33) AR₇ is methyl or ethyl, n is 1, q is 0, and R is CH₂Si(CH₃)₃ or a substituted aryl or benzyl group, where the substituents are chosen from the group consisting of halogen, C₁-C₄alkyl, halogeno-C₁-C₄alkyl, C₃-C₆cycloalkyl and halogeno-C₃-C₆cycloalkyl.

the C=N double bond marked with E has the E configuration;

- (37) (2-{2-[4-(2,2-Dichloro-cyclopropylmethoxy)-3-fluoro-phenyl]-2-methoxyimino-1-methyl-ethylideneaminoxymethyl}-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.3);
- (38) Methoxyimino-(2-{2-methoxyimino-1-methyl-2-[4-(3-trifluoromethyl-phenoxy)-phenyl]-ethylideneaminoxymethyl}-phenyl)-acetic acid methyl ester (compound 2.31);
- (39) (2-{2-[3,5-Difluoro-4-(3-trifluoromethyl-benzyloxy)-phenyl]-2-methoxyimino-1-methyl-ethylideneaminoxymethyl}-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.11);
- (40) 2-Methoxyimino-2-(2-{2-methoxyimino-1-methyl-2-[4-(3-trifluoromethyl-phenoxy)-phenyl]-ethylideneaminoxymethyl}-phenyl)-N-methyl-acetamide (compound 3.31);
- (41) [2-(2-[4-[2-(3,5-Bis-trifluoromethyl-phenyl)-ethyl]-phenyl]-2-methoxyimino-1-methyl-ethylideneaminoxymethyl)-phenyl]-3-methoxy-acrylic acid methyl ester (compound 155.6);
- (42) 3-Methoxy-2-[2-(2-methoxyimino-1-methyl-2-[4-[2-(3-trifluoromethyl-phenyl)-ethyl]-phenyl]-ethylideneaminoxymethyl)-phenyl]-acrylic acid methyl ester (compound 155.7);
- (43) (2-{2-[4-(2,2-Dichloro-cyclopropylmethoxy)-2,5-difluoro-phenyl]-2-methoxyimino-1-methyl-ethylideneaminoxymethyl}-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.13);
- (44) (2-{2-[2,5-Difluoro-4-(3-trifluoromethyl-benzyloxy)-phenyl]-2-methoxyimino-1-methyl-ethylideneaminoxymethyl}-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.14);
- (45) 3-Methoxy-2-[2-(1-{methoxyimino-[4-(3-trifluoromethyl-benzyloxy)-phenyl]-methyl}-propylideneaminoxymethyl)-phenyl]-acrylic acid methyl ester (compound 1.25);
- (46) [2-(1-[4-(4-Fluoro-benzyloxy)-phenyl]-methoxyimino-methyl)-propylideneaminoxymethyl]-phenyl]-3-methoxy-acrylic acid methyl ester (compound 1.66)

- (47) [2-(2-[4-[2-(2,4-Dichloro-phenyl)-ethyl]-phenyl]-2-methoxyimino-1-methyl-ethylideneaminoxymethyl)-phenyl]-3-methoxy-acrylic acid methyl ester (compound 155.3);
- (48) (2-[2-[4-(4-Bromo-phenoxy)-phenyl]-2-methoxyimino-1-methyl-ethylideneaminoxymethyl]-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.41);
- (49) (2-[2-[2-Fluoro-4-(3-trifluoromethyl-benzyloxy)-phenyl]-2-methoxyimino-1-methyl-ethylideneaminoxymethyl]-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.7);
- (50) (2-[2-Allyloxyimino-1-methyl-2-[4-(3-trifluoromethyl-benzyloxy)-phenyl]-ethylideneaminoxymethyl]-phenyl)-3-methoxy-acrylic acid methyl ester (compound 4.4);
- (51) (2-[2-Ethoxyimino-1-methyl-2-[4-(3-trifluoromethyl-benzyloxy)-phenyl]-ethylideneaminoxymethyl]-phenyl)-3-methoxy-acrylic acid methyl ester (compound 4.5);
- (52) 3-Methoxy-2-(2-[1-methyl-2-prop-2-ynyloxyimino-2-[4-(3-trifluoromethyl-benzyloxy)-phenyl]-ethylideneaminoxymethyl]-phenyl)-acrylic acid methyl ester (compound 4.6);
- (53) (2-[2-[4-(2,2-Dichloro-cyclopropylmethoxy)-2-fluoro-phenyl]-2-methoxyimino-1-methyl-ethylideneaminoxymethyl]-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.9);
- (54) [2-[4-(4-Bromo-phenoxy)-phenyl]-2-methoxyimino-1-methyl-ethylideneaminoxymethyl]-phenyl)-methoxyimino-acetic acid methyl ester (compound 2.28);
- (55) (2-[2-[4-(3-Chloro-phenoxy)-phenyl]-2-methoxyimino-1-methyl-ethylideneaminoxymethyl]-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.36);
- (56) (2-[2-[4-(4-tert-Butyl-benzyloxy)-phenyl]-2-methoxyimino-1-methyl-ethylideneaminoxymethyl]-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.28);
- (57) (2-[2-[4-(4-Fluoro-benzyloxy)-phenyl]-1-methyl-2-prop-2-ynyloxyimino-ethylideneaminoxymethyl]-phenyl)-3-methoxy-acrylic acid methyl ester (compound 4.21);
- (58) (2-[2-Ethoxyimino-2-[4-(4-fluoro-benzyloxy)-phenyl]-1-methyl-ethylideneaminoxymethyl]-phenyl)-3-methoxy-acrylic acid methyl ester (compound 4.24);
- (59) Methoxyimino-(2-[1-methyl-2-prop-2-ynyloxyimino-2-[4-(3-trifluoromethyl-benzyloxy)-phenyl]-ethylideneaminoxymethyl]-phenyl)-acetic acid methyl ester (compound 4.18);
- (60) (2-[2-Butoxyimino-1-methyl-2-[4-(3-trifluoromethyl-benzyloxy)-phenyl]-ethylideneaminoxymethyl]-phenyl)-3-methoxy-acrylic acid methyl ester (compound 4.15);
- (61) (2-[2-[4-(4-Chloro-phenoxy)-phenyl]-2-ethoxyimino-1-methyl-ethylideneaminoxymethyl]-phenyl)-3-methoxy-acrylic acid methyl ester (compound 4.20);

- (62) {2-[2-(4-Isobutoxy-phenyl)-2-methoxyimino-1-methyl-ethylideneaminooxymethyl]-phenyl}-3-methoxy-acrylic acid methyl ester (compound 1.31);
- (63) {2-[2-(2-Fluoro-4-propoxy-phenyl)-2-methoxyimino-1-methyl-ethylideneaminooxymethyl]-phenyl}-3-methoxy-acrylic acid methyl ester (compound 1.63);
- (64) {2-[2-Ethoxyimino-1-methyl-2-[4-(4-trifluoromethyl-benzyloxy)-phenyl]-ethylideneaminooxymethyl]-phenyl}-3-methoxy-acrylic acid methyl ester (compound 4.25);
- (65) {2-Ethoxyimino-1-methyl-2-[4-(4-trifluoromethyl-benzyloxy)-phenyl]-ethylideneaminooxymethyl]-phenyl}-methoxyimino-acetic acid methyl ester (compound 4.26);
- (66) {2-[2-Ethoxyimino-1-methyl-2-[4-(4-trifluoromethyl-benzyloxy)-phenyl]-ethylideneaminooxymethyl]-phenyl}-2-methoxyimino-N-methyl-acetamide (compound 4.27);
- (67) {2-Ethoxyimino-1-methyl-2-[4-(2-trifluoromethyl-benzyloxy)-phenyl]-ethylideneaminooxymethyl]-phenyl}-methoxyimino-acetic acid methyl ester (compound 4.28);
- (68) {2-[2-Ethoxyimino-1-methyl-2-[4-(2-trifluoromethyl-benzyloxy)-phenyl]-ethylideneaminooxymethyl]-phenyl}-2-methoxyimino-N-methyl-acetamide (compound 4.29);
- (69) {2-[2-Ethoxyimino-1-methyl-2-[4-(3-trifluoromethyl-phenoxy)-phenyl]-ethylideneaminooxymethyl]-phenyl}-3-methoxy-acrylic acid methyl ester (compound 4.32);
- (70) {2-[4-(4-Chloro-phenoxy)-phenyl]-2-ethoxyimino-1-methyl-ethylideneaminooxymethyl]-phenyl}-methoxyimino-acetic acid methyl ester (compound 4.68);
- (71) {2-[2-[4-(4-Chloro-phenoxy)-phenyl]-2-ethoxyimino-1-methyl-ethylideneaminooxymethyl]-phenyl}-2-methoxyimino-N-methyl-acetamide (compound 4.70);
- (72) {2-[4-(3,4-Dichloro-phenoxy)-phenyl]-2-ethoxyimino-1-methyl-ethylideneaminooxymethyl]-phenyl}-methoxyimino-acetic acid methyl ester (compound 4.71);
- (73) {2-[2-[4-(3,4-Dichloro-phenoxy)-phenyl]-2-ethoxyimino-1-methyl-ethylideneaminooxymethyl]-phenyl}-3-methoxy-acrylic acid methyl ester (compound 4.72);
- (74) {2-[2-[4-(3,4-Dichloro-phenoxy)-phenyl]-2-ethoxyimino-1-methyl-ethylideneaminooxymethyl]-phenyl}-2-methoxyimino-N-methyl-acetamide (compound 4.73);
- (75) {2-[2-Ethoxyimino-1-methyl-2-[4-(4-trifluoromethyl-phenoxy)-phenyl]-ethylideneaminooxymethyl]-phenyl}-2-methoxyimino-N-methyl-acetamide (compound 4.146);
- (76) {2-[2-Ethoxyimino-1-methyl-2-[4-(4-trifluoromethyl-phenoxy)-phenyl]-ethylideneaminooxymethyl]-phenyl}-2-methoxyimino-N-methyl-acetamide (compound 4.144);
- (77) {2-Ethoxyimino-1-methyl-2-[4-(4-trifluoromethyl-phenoxy)-phenyl]-ethylideneaminooxymethyl]-phenyl}-methoxyimino-acetic acid methyl ester (compound 4.141);
- (78) {2-[2-[4-(4-Chloro-benzyloxy)-phenyl]-2-ethoxyimino-1-methyl-ethylideneaminooxymethyl]-phenyl}-3-methoxy-acrylic acid methyl ester (compound 4.66);

- (79) (2-{2-[4-(4-Bromo-phenoxy)-phenyl]-2-ethoxyimino-1-methyl-ethylidene-aminooxymethyl}-phenyl)-3-methoxy-acrylic acid methyl ester (compound 4.39);
- (80) (2-{2-[4-(4-tert.-Butyl-phenoxy)-phenyl]-2-ethoxyimino-1-methyl-ethylidene-aminooxymethyl}-phenyl)-3-methoxy-acrylic acid methyl ester (compound 4.55);
- (81) [4-isobutoxy-phenyl]-2-methoxyimino-1-methyl-ethylideneaminooxymethyl-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.31);
- (82) [4-fluoro-2-methyl-phenyl]-2-methoxyimino-1-methyl-ethylideneaminooxymethyl-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.51);
- (83) [2-fluoro-4-methyl-phenyl]-2-methoxyimino-1-methyl-ethylideneaminooxymethyl-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.57);
- (84) [4-cyclopentyloxy-phenyl]-2-methoxyimino-1-methyl-ethylideneaminooxymethyl-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.62);
- (85) [2-fluoro-4-n-propyloxy-phenyl]-2-methoxyimino-1-methyl-ethylideneaminooxymethyl-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.63);
- (86) [2-methyl-4-n-propoxy-phenyl]-2-methoxyimino-1-methyl-ethylideneaminooxymethyl-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.64);
- (87) [2-fluoro-4-ethoxy-phenyl]-2-methoxyimino-1-methyl-ethylideneaminooxymethyl-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.70);
- (88) [2-fluoro-4-methoxy-phenyl]-2-methoxyimino-1-methyl-ethylideneaminooxymethyl-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.72);
- (89) [4-ethoxy-2-methyl-phenyl]-2-methoxyimino-1-methyl-ethylideneaminooxymethyl-phenyl)-3-methoxy-acrylic acid methyl ester (compound 1.79);
- (90) 2-Methoxyimino-(2-{2-methoxyimino-1-methyl-2-[4-isobutoxy]-phenyl}-ethylideneaminooxymethyl)-phenyl)-acetic acid methyl ester (compound 2.22);
- (91) 2-Methoxyimino-(2-{2-methoxyimino-1-methyl-2-[4-n-propoxy-phenyl]-ethylideneaminooxymethyl)-phenyl)-acetic acid methyl ester (compound 2.23);
- (92) 2-Methoxyimino-(2-{2-methoxyimino-1-methyl-2-[4-fluoro-2-methyl-phenyl]-ethylideneaminooxymethyl)-phenyl)-acetic acid methyl ester (compound 2.35);
- (93) 2-Methoxyimino-(2-{2-methoxyimino-1-methyl-2-[2-fluoro-4-methyl-phenyl]-ethylideneaminooxymethyl)-phenyl)-acetic acid methyl ester (compound 2.39);
- (94) 2-Methoxyimino-(2-{2-methoxyimino-1-methyl-2-[4-cyclopentyloxy-phenyl]-ethylideneaminooxymethyl)-phenyl)-acetic acid methyl ester (compound 2.44);
- (95) 2-Methoxyimino-(2-{2-methoxyimino-1-methyl-2-[2-fluoro-4-n-propoxy-phenyl]-ethylideneaminooxymethyl)-phenyl)-acetic acid methyl ester (compound 2.45);

- (96) 2-Methoxyimino-(2-(2-methoxyimino-1-methyl-2-[2-methyl-4-n-propoxy-phenyl]-ethylideneaminoxymethyl)-phenyl)-acetic acid methyl ester (compound 2.46);
- (97) 2-Methoxyimino-(2-(2-methoxyimino-1-methyl-2-[2-fluoro-4-ethoxy-phenyl]-ethylideneaminoxymethyl)-phenyl)-acetic acid methyl ester (compound 2.49);
- (98) 2-Methoxyimino-(2-(2-methoxyimino-1-methyl-2-[2-fluoro-4-methoxy-phenyl]-ethylideneaminoxymethyl)-phenyl)-acetic acid methyl ester (compound 2.52);
- (99) 2-Methoxyimino-(2-(2-methoxyimino-1-methyl-2-[4-n-ethoxy-2-methyl-phenyl]-ethylideneaminoxymethyl)-phenyl)-acetic acid methyl ester (compound 2.59);
- (100) 2-Methoxyimino-2-(2-(2-methoxyimino-1-methyl-2-[4-isobutoxy-phenyl]-ethylideneaminoxymethyl)-phenyl)-N-methyl-acetamide (compound 3.22);
- (101) 2-Methoxyimino-2-(2-(2-methoxyimino-1-methyl-2-[4-n-propoxy-phenyl]-ethylideneaminoxymethyl)-phenyl)-N-methyl-acetamide (compound 3.23);
- (102) 2-Methoxyimino-2-(2-(2-methoxyimino-1-methyl-2-[4-n-butoxy-phenyl]-ethylideneaminoxymethyl)-phenyl)-N-methyl-acetamide (compound 3.24);
- (103) 2-Methoxyimino-2-(2-(2-methoxyimino-1-methyl-2-[4-fluoro-2-methyl-phenyl]-ethylideneaminoxymethyl)-phenyl)-N-methyl-acetamide (compound 3.35);
- (104) 2-Methoxyimino-2-(2-(2-methoxyimino-1-methyl-2-[2-fluoro-4-methyl-phenyl]-ethylideneaminoxymethyl)-phenyl)-N-methyl-acetamide (compound 3.39);
- (105) 2-Methoxyimino-2-(2-(2-methoxyimino-1-methyl-2-[4-cyclopentyloxy-phenyl]-ethylideneaminoxymethyl)-phenyl)-N-methyl-acetamide (compound 3.45);
- (106) 2-Methoxyimino-2-(2-(2-methoxyimino-1-methyl-2-[2-fluoro-4-n-propoxy-phenyl]-ethylideneaminoxymethyl)-phenyl)-N-methyl-acetamide (compound 3.46);
- (107) 2-Methoxyimino-2-(2-(2-methoxyimino-1-methyl-2-[2-methyl-4-n-propoxy-phenyl]-ethylideneaminoxymethyl)-phenyl)-N-methyl-acetamide (compound 3.47);
- (108) 2-Methoxyimino-2-(2-(2-methoxyimino-1-methyl-2-[2-fluoro-4-ethoxy-phenyl]-ethylideneaminoxymethyl)-phenyl)-N-methyl-acetamide (compound 3.50);
- (109) 2-Methoxyimino-2-(2-(2-methoxyimino-1-methyl-2-[2-fluoro-4-methoxy-phenyl]-ethylideneaminoxymethyl)-phenyl)-N-methyl-acetamide (compound 3.53); and
- (110) 2-Methoxyimino-2-(2-(2-methoxyimino-1-methyl-2-[4-ethoxy-2-methyl-phenyl]-ethylideneaminoxymethyl)-phenyl)-N-methyl-acetamide (compound 3.60).

The compounds of the formula (I) listed in Tables 1 to 158 and, where appropriate, E/Z isomers and E/Z isomer mixtures thereof are particularly preferred in the context of the invention.

The invention furthermore relates to the process for the preparation of the compounds of the formula (I) and, where appropriate, their E/Z isomers, E/Z isomer mixtures and/or tautomers, in each case in the free form or in salt form, for example which comprises

a1) either reacting a compound of the formula

which is known or can be prepared by methods known per se and in which

X, Y, Z, R₃, R₄ and R₉ are as defined for formula (I) and

X₁ is a leaving group, and in which the provisos mentioned above for the compounds of the formula (I) apply, preferably in the presence of a base, with a compound of the formula

in which n, q, A, G, R, R₂, R₅ and R₇ are as defined for formula (I), and in which the provisos mentioned above for the compounds of the formula (I) apply, or

a2) reacting a compound of the formula

in which n, q, R, A, G, R₂, R₅ and R₇ are as defined for formula (I),

and in which the provisos mentioned above for the compounds of the formula (I) apply, if appropriate in the presence of a base, with a compound of the formula

which is known or can be prepared by methods known per se, and in which X, Y, Z, R₃, R₄ and R₅ are as defined for formula (I), or

b) for the preparation of a compound of the formula (I) in which Y is NHR₆ and Z is O, reacting a compound of the formula (I) in which Y is OR₁ with a compound of the formula R₆NH₂, which is known or can be prepared by methods known per se and in which R₆ is as defined for formula (I), or

c) for the preparation of a compound of the formula (I) in which Y is NHR₆ and Z is S, reacting a compound of the formula (I) in which Y is R₆NH and Z is O with P₄S₁₀ or Lawesson's reagent, or

d) for the preparation of a compound of the formula (I) in which Z is SO, reacting a compound of the formula (I) in which Z is S with an oxidizing agent, or

e) for the preparation of a compound of the formula (I) in which R₅ is aryl-Q-C₂-C₆alkyl, aryl-Q-C₂-C₆alkenyl, heterocyclyl-Q-C₂-C₆alkyl, heterocyclyl-Q-C₂-C₆alkenyl, or aryl-Q-C₂-C₆alkyl or aryl-Q-C₂-C₆alkenyl, heterocyclyl-Q-C₂-C₆alkyl or heterocyclyl-Q-C₂-C₆alkenyl which are mono- to pentasubstituted in the aryl or heterocyclyl ring, depending on the possibility of substitution, and where the substituents independently of one another are selected from the group consisting of halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, CN, nitro, OC(=O)-C₁-C₆alkyl, OH, NH₂ and C₁-C₆alkoxycarbonyl;

Q is a direct bond, -CH(OH)-, -C(=O)- or -S(=O)_v-; and

v is 0, 1 or 2,

reacting a compound of the formula

in which

X, Y, Z, R₃, R₄, R₅, n, q, R, A, G, R₂ and R₇ are as defined for formula (I),

R_{6a} is aryl-Q-C₂-C₆alkynyl or heterocyclyl-Q-C₂-C₆alkynyl, or aryl-Q-C₂-C₆alkynyl or heterocyclyl-Q-C₂-C₆alkynyl which are mono- to pentasubstituted in the aryl or heterocyclyl ring, depending on the possibility of substitution, and where the substituents independently of one another are chosen from the group consisting of halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, CN, nitro and C₁-C₆alkoxycarbonyl;

Q is a direct bond, -CH(OH)-, -C(=O)- or -S(=O)_v-; and

v is 0, 1 or 2;

and in which the provisos mentioned above for the compounds of the formula (I) apply;

which is known or can be prepared by processes known per se, with hydrogen in the presence of a hydrogenation catalyst,

and in each case, if desired, converting a compound of the formula (I) obtainable according to the process or in another manner or an E/Z isomer or tautomer thereof, in each case in the free form or in salt form, into another compound of the formula (I) or an E/Z isomer or tautomer thereof, in each case in the free form or in salt form, separating a mixture of E/Z isomers obtainable according to the process and isolating the desired isomer, and/or converting a free compound of the formula (I) obtainable according to the process or in another manner or an E/Z isomer or tautomer thereof into a salt or converting a salt, obtainable according to the process or in another manner, of a compound of the formula (I) or of an E/Z isomer or tautomer thereof into the free compound of the formula (I) or an E/Z isomer or tautomer thereof or into another salt.

The invention furthermore relates to the process for the preparation of compounds of the formula (III), in each case in the free form or in salt form, for example which comprises

f) reacting a compound of the formula (IV) in which n , q , A , G , R , R_2 , R_5 and R_7 are as defined for formula (I) and in which the provisos mentioned above for the compounds of the formula (I) apply, if appropriate in the presence of a base, with H_2NOH or a salt thereof, or

g) reacting a compound of the formula

in which n , q , G , R , R_2 and R_5 are as defined for formula (I)

and in which the provisos mentioned above for the compounds of the formula (I) apply, if appropriate in the presence of a base, with a compound of the formula

which is known or can be prepared by methods known per se and in which A and R_7 are as defined for formula (I),

and in each case, if desired, converting a compound of the formula (III) obtainable according to the process or in another manner or an *E/Z* isomer or tautomer thereof, in each case in the free form or in salt form, into another compound of the formula (III) or an *E/Z* isomer or tautomer thereof, in each case in the free form or in salt form, separating a mixture of *E/Z* isomers obtainable according to the process and isolating the desired isomers, and/or converting a free compound of the formula (III) obtainable according to the process or in another manner or an *E/Z* isomer or tautomer thereof into a salt, or converting a salt, obtainable according to the process or in another manner, of a compound of the formula (III) or of an *E/Z* isomer or tautomer thereof into the free compound of the formula (III) or an *E/Z* isomer or tautomer thereof or into another salt.

Because of their structure, the compounds of the formulae (III), (IV) and (VI) are particularly suitable for the preparation of the active end products of the formula (I) or other active substances having this part structure. Where they are new, the present invention likewise relates to them.

The statements above for the E/Z isomers and tautomers of compounds of the formulae (I) and (III) apply in an analogous manner to starting materials defined above and below in respect of E/Z isomers and tautomers thereof.

The reactions described above and below are carried out in a manner known per se, for example in the absence or usually in the presence of a suitable solvent or diluent or of a mixture thereof, the reactions being carried out, as required, with cooling, at room temperature or with heating, for example in a temperature range from about 0°C up to the boiling point of the reaction medium, preferably from about 20°C to about +120°C, in particular 60°C to 80°C, and, if necessary, in a closed vessel, under pressure, in an inert gas atmosphere and/or under anhydrous conditions. Particularly advantageous reaction conditions can be seen from the examples.

The starting materials defined above and below which are used for the preparation of the compounds of the formula (I) and, where appropriate, their E/Z isomers and tautomers are known or can be prepared by methods known per se, for example according to the instructions below.

Variants a1/a2):

Suitable leaving groups X_1 in the compounds of the formula (II) are, for example, hydroxyl, C_1 - C_8 alkoxy, halogeno- C_1 - C_8 -alkoxy, C_1 - C_8 alkanoyloxy, mercapto, C_1 - C_8 alkylthio, halogeno- C_1 - C_8 -alkylthio, C_1 - C_8 alkanesulfonyloxy, halogeno- C_1 - C_8 -alkanesulfonyloxy, benzenesulfonyloxy, toluenesulfonyloxy and halogen, preferably toluenesulfonyloxy, trifluoromethanesulfonyloxy and halogen, in particular halogen.

Suitable bases to facilitate the reaction are, for example, alkali metal or alkaline earth metal hydroxides, hydrides, amides, alkanolates, acetates, carbonates, dialkylamides or alkylsilylamides, alkylamines, alkylenediamines, non-alkylated or N-alkylated, saturated or unsaturated cycloalkylamines, basic heterocyclic compounds, ammoniumhydroxides and carboxylic amines. Examples are sodium hydroxide, hydride, amide, methanolate, acetate, and carbonate, potassium tert-butanolate, hydroxide, carbonate and hydride, lithium diisopropylamide, potassium bis(trimethylsilyl)-amide, calcium hydride, triethylamine, diisopropylethyl-amine, triethylenediamine, cyclohexylamine, N-cyclohexyl-N,N-dimethylamine, N,N-diethylaniline, pyridine, 4-(N,N-dimethylamino)pyridine, quinuclidine, N-methylmorpholine, benzyltrimethylammonium hydroxide and 1,5-diazabicyclo[5.4.0]undec-5-ene (DBU).

The reaction partners can be reacted with one another as such, i.e. without addition of a solvent or diluent, for example in the melt. Usually, however, the addition of an inert solvent or diluent or of a mixture thereof is advantageous. Examples of such solvents or diluents are: aromatic, aliphatic and alicyclic hydrocarbons and halogenated hydrocarbons, such as benzene, toluene, xylene, mesitylene, tetralin, chlorobenzene, dichlorobenzene, bromobenzene, petroleum ether, hexane, cyclohexane, methylene chloride, chloroform, carbon tetrachloride, dichloroethane, trichloroethene or tetrachloroethene; esters, such as ethyl acetate, ethers, such as diethyl ether, dipropyl ether, diisopropyl ether, dibutyl ether, tert-butylmethyl ether, ethylene glycol monomethyl ether, ethylene glycol monoethyl ether, ethylene glycol dimethyl ether, dimethoxydiethyl ether, tetrahydrofuran or dioxane; ketones, such as acetone, methyl ethyl ketone or methyl isobutyl ketone; alcohols, such as methanol, ethanol, propanol, isopropanol, butanol, ethylene glycol or glycerol; amides, such as N,N-dimethylformamide, N,N-diethylformamide, N,N-dimethylacetamide, N-methylpyrrolidone or hexamethylphosphoric acid triamide; nitriles, such as acetonitrile or propionitrile; and sulfoxides, such as dimethyl sulfoxide. If the reaction is carried out in the presence of a base, bases employed in excess, such as triethylamine, pyridine, N-methylmorpholine or N,N-diethylaniline, can also serve as solvents or diluents.

The reaction is advantageously carried out in a temperature range from about 0°C to about 180°C, preferably from about 10°C to about 80°C, in many cases in the range between room temperature and the reflux temperature of the reaction mixture.

The reaction is preferably carried out under normal pressure.

The reaction can be carried out without an inert gas atmosphere; however, it is preferably carried out under an inert gas atmosphere, for example nitrogen or argon, in particular nitrogen.

The reaction time is not critical; a reaction time of about 0.1 to about 24 hours, in particular about 0.5 to about 2 hours, is preferred.

The product is isolated by customary methods, for example by filtration, crystallization, distillation or chromatography or any suitable combination of these processes.

In a preferred embodiment of variants a1/a2), a compound (II) is reacted with a compound (III) at 0°C to 80°C, preferably 10°C to 30°C, in an inert solvent, preferably an amide, in particular N,N-dimethylformamide, in the presence of a metal hydride, preferably sodium hydride.

Particularly preferred conditions for the reaction are described in Examples H1d) and H1e).

The compounds of the formula (II) are known or can be prepared analogously to known compounds.

Variant b)

The reaction partners can be reacted with one another as such, i.e. without addition of a solvent or diluent, for example in the melt. Usually, however, the addition of an inert solvent or diluent or of a mixture thereof is advantageous. Examples of such solvents or diluents are those mentioned in variant a1/a2).

The reaction is advantageously carried out in a temperature range from about 0°C to about 180°C, preferably from about 10°C to about 80°C, in many cases in the range between room temperature and the reflux temperature of the reaction mixture.

The reaction is preferably carried out under normal pressure.

The reaction can be carried out without an inert gas atmosphere; preferably, however, it is carried out under an inert gas atmosphere, for example nitrogen or argon, in particular nitrogen.

The reaction time is not critical; a reaction time of about 0.1 to about 24 hours, in particular about 0.5 to about 2 hours, is preferred.

The product is isolated by customary methods, for example by filtration, crystallization, distillation or chromatography or any suitable combination of these processes.

Variant c)

The reaction partners can be reacted with one another as such, i.e. without addition of a solvent or diluent, for example in the melt. Usually, however, the addition of an inert solvent or diluent or of a mixture thereof is advantageous. Examples of such solvents or diluents are: aromatic, aliphatic and alicyclic hydrocarbons and halogenated hydrocarbons, such as benzene, toluene, xylene, mesitylene, tetralin, chlorobenzene, dichlorobenzene, bromobenzene, petroleum ether, hexane, cyclohexane, methylene chloride, chloroform, carbon tetrachloride, dichloroethane, trichloroethene or tetrachloroethene; ethers, such as diethyl ether, dipropyl ether, diisopropyl ether, dibutyl ether, tert-butyl methyl ether, ethylene glycol monomethyl ether, ethylene glycol monoethyl ether, ethylene glycol dimethyl ether, dimethoxydiethyl ether, tetrahydrofuran or dioxane; and sulfoxides, such as dimethyl sulfoxide.

The reaction is advantageously carried out in a temperature range from about 0°C to about +120°C, preferably from about 80°C to about +120°C.

The reaction is preferably carried out under normal pressure.

The reaction can be carried out without an inert gas atmosphere; however, it is preferably carried out under an inert gas atmosphere, for example nitrogen or argon, in particular nitrogen.

The reaction time is not critical; a reaction time of about 0.1 to about 24 hours, in particular about 0.5 to about 2 hours, is preferred.

The product is isolated by customary methods, for example by filtration, crystallization, distillation or chromatography or any suitable combination of these processes.

Variant d)

Suitable oxidizing agents are, for example, inorganic peroxides, such as sodium perborate, or hydrogen peroxide, or organic peracids, such as perbenzoic acid or peracetic acid, or mixtures of organic acids and hydrogen peroxide, for example acetic acid/hydrogen peroxide.

The reaction partners can be reacted with one another as such, i.e. without addition of a solvent or diluent, for example in the melt. Usually, however, the addition of an inert solvent or diluent or of a mixture thereof is advantageous. Examples of such solvents or diluents are: aromatic, aliphatic and alicyclic hydrocarbons and halogenated hydrocarbons, such as benzene, toluene, xylene, mesitylene, tetralin, chlorobenzene, dichlorobenzene, bromobenzene, petroleum ether, hexane, cyclohexane, methylene chloride, chloroform, carbon tetrachloride, dichloroethane, trichloroethene or tetrachloroethene; esters, such as ethyl acetate; ethers, such as diethyl ether, dipropyl ether, diisopropyl ether, dibutyl ether, tert-butyl methyl ether, ethylene glycol monomethyl ether, ethylene glycol monoethyl ether, ethylene glycol dimethyl ether, dimethoxy diethyl ether, tetrahydrofuran or dioxane; ketones, such as acetone, methyl ethyl ketone or methyl isobutyl ketone; alcohols, such as methanol, ethanol or propanol; amides, such as N,N-dimethylformamide, N,N-diethylformamide, N,N-dimethylacetamide, N-methylpyrrolidone or hexamethylphosphoric acid triamide; nitriles, such as acetonitrile or propionitrile; and sulfoxides, such as dimethyl sulfoxide. If the reaction is carried out in the presence of an organic acid or peracid, acids employed in excess, for example strong organic carboxylic acids, such as C₁-C₄alkane-

- 32 -

carboxylic acids which are unsubstituted or substituted, for example by halogen, for example formic acid, acetic acid or propionic acid, can also serve as the solvent or diluent.

The reaction is advantageously carried out in a temperature range from about 0°C to about +120°C, preferably from about 0 °C to about +40 °C.

The reaction is preferably carried out under normal pressure.

The reaction can be carried out without an inert gas atmosphere; however, it is preferably carried out under an inert gas atmosphere, for example nitrogen or argon, in particular nitrogen.

The reaction time is not critical; a reaction time of about 0.1 to about 24 hours, in particular about 0.5 to about 2 hours, is preferred.

The product is isolated by customary methods, for example by filtration, crystallization, distillation or chromatography or any suitable combination of these processes.

Variant e)

Suitable hydrogenation catalysts are, in particular, transition metal catalysts, in particular palladium, ruthenium, rhodium, nickel, zinc or platinum catalysts. Raney nickel, palladium-on-active charcoal and Lindlar catalyst (Pd-CaCO₃-PbO) are particularly suitable. However, the hydrogenation can also be carried out in a homogeneous solution, for example in the presence of RhCl(Ph₃)₃ (Wilkinson's catalyst).

The reaction partners can be reacted with one another as such, i.e. without addition of a solvent or diluent, for example in the melt. Usually, however, the addition of an inert solvent or diluent or of a mixture thereof is advantageous. Examples of such solvents or diluents are those mentioned in variant a1/a2). Ethers, such as tetrahydrofuran or dioxane, and esters, such as ethyl acetate, are particularly suitable.

The reaction is advantageously carried out in a temperature range from about 0°C to about 80°C, preferably from about 10°C to about 50°C, and in many cases at room temperature.

The reaction is preferably carried out under normal pressure or slightly increased pressure, preferably under normal pressure.

The reaction time is not critical; a reaction time of about 0.1 to about 24 hours, in particular about 0.5 to about 2 hours, is preferred.

The product is isolated by customary methods, for example by filtration, crystallization, distillation or chromatography or any suitable combination of these processes.

Particularly preferred conditions for the reaction are described in Examples H3 a) to c).

Variant f)

Suitable bases for facilitating the reaction are, for example, those mentioned in variant a1/a2).

The reaction partners can be reacted with one another as such, i.e. without addition of a solvent or diluent, for example in the melt. Usually, however, the addition of an inert solvent or diluent or of a mixture thereof is advantageous. Examples of such solvents or diluents are those mentioned in variant a1/a2).

The reaction is advantageously carried out in a temperature range from about 0°C to about 180°C, preferably from about 10°C to about 80°C, and in many cases in the range between room temperature and the reflux temperature of the reaction mixture.

The reaction is preferably carried out under normal pressure.

The reaction can be carried out without an inert gas atmosphere; however, it is preferably carried out under an inert gas atmosphere, for example nitrogen or argon, in particular nitrogen.

The reaction time is not critical; a reaction time of about 0.1 to about 24 hours, in particular about 0.5 to about 2 hours, is preferred.

The product is isolated by customary methods, for example by filtration, crystallization, distillation or chromatography or any suitable combination of these processes.

Variant g)

Suitable bases for facilitating the reaction are, for example, those mentioned in variant a1/a2).

The reaction partners can be reacted with one another as such, i.e. without addition of a solvent or diluent, for example in the melt. Usually, however, the addition of an inert solvent or diluent or of a mixture thereof is advantageous. Examples of such solvents or diluents are those mentioned in variant a1/a2).

The reaction is advantageously carried out in a temperature range from about 0°C to about 180°C, preferably from about 10°C to about 80°C, in many cases in the range between room temperature and the reflux temperature of the reaction mixture.

The reaction is preferably carried out under normal pressure.

The reaction can be carried out without an inert gas atmosphere; however, it is preferably carried out under an inert gas atmosphere, for example nitrogen or argon, in particular nitrogen.

The reaction time is not critical; a reaction time of about 0.1 to about 24 hours, in particular about 0.5 to about 2 hours, is preferred.

The product is isolated by customary methods, for example by filtration, crystallization, distillation or chromatography or any suitable combination of these processes.

In a preferred embodiment of variant f), a compound (VI) is reacted with a compound (VII) at 0°C to 120°C, preferably 60°C to 120°C, in an inert solvent, preferably an amine, in particular pyridine.

The compounds of the formulae (I), (II), (III), (IV), (V) and (VI) can be present in the form of one of the possible isomers or as a mixture thereof, for example depending on the number and the absolute and relative configuration of the asymmetric carbon atoms, as pure isomers, such as antipodes and/or diastereomers, or as isomer mixtures, such as enantiomer mixtures, for example racemates, diastereomer mixtures or racemate mixtures; the invention relates both to the pure isomers and to all the possible isomer mixtures and is in each case to be understood accordingly above and below, although stereochemical details are not mentioned specifically in every case.

Because of the physico-chemical differences of the constituents, diastereomer mixtures and racemate mixtures of compounds of the formulae (I), (II), (III), (IV), (V) and (VI) obtainable according to the process - depending on the choice of starting substances and procedures - or in another manner can be separated into the pure diastereomers or racemates in a known manner, for example by fractional crystallization, distillation and/or chromatography.

Correspondingly obtainable enantiomer mixtures, such as racemates, can be separated into the optical antipodes by known methods, for example by recrystallization from an optically active solvent, by chromatography over chiral adsorbents, for example high pressure liquid chromatography (HPLC) on acetylcellulose, with the aid of suitable

microorganisms, by cleavage with specific, immobilized enzymes, or via the formation of inclusion compounds, for example using chiral crown ethers, only one enantiomer being complexed.

As well as by separation of corresponding isomer mixtures, pure diastereomers or enantiomers can also be obtained according to the invention by generally known methods of diastereoselective or enantioselective synthesis, for example by carrying out the process according to the invention with educts with correspondingly suitable stereochemistry.

In each case the more biologically active isomer, for example enantiomer, or isomer mixture, for example enantiomer mixture, is advantageously isolated or synthesized, if the individual components have a different biological activity.

The compounds of the formulae (I), (II), (III), (IV), (V) and (VI) can also be obtained in the form of their hydrates and/or include other solvents, for example solvents which may be used for crystallization of compounds present in solid form.

The invention relates to all those embodiments of the process in which a compound obtainable at any stage of the process is used as a starting substance or intermediate product and all or some of the missing steps are carried out, or a starting substance is used in the form of a derivative or salt and/or its racemates or antipodes or, in particular, is formed under the reaction conditions.

In the process of the present invention, those starting substances and intermediates which lead to the compounds of the formula (I) defined above as particularly valuable or preferably used.

The invention particularly relates to the preparation processes described in Examples H1a) to e).

The invention likewise relates to starting substances and intermediate products used according to the invention for the preparation of compounds of the formula (I) and to their use and processes for their preparation, in particular the compounds of the formulae (III), (IV) and (VI), which are novel. In particular, the compounds of the formulae (III) and (VI) can be prepared analogously to Examples H1c) and H1b) respectively.

The compounds of the formula (I) according to the invention are already preventively and/or curatively valuable active compounds with a very favourable biocidal spectrum even at low rates of concentration in the field of pest control, and at the same time show favourable tolerance by warm-blooded animals, fish and plants. The active compounds according to

the invention are active against all or individual stages of development of normally sensitive and also of resistant animal pests, such as insects and representatives of the order Acarina, and phytopathogenic fungi. The insecticidal, ovicidal and/or acaricidal action of the active compounds according to the invention can manifest itself here directly, i.e. in mortality of the pests, which occurs immediately or only after some time, for example during moulting, or of their eggs, or indirectly, for example in reduced ovi position and/or hatching rate, the good action corresponding to a mortality rate of at least 50 to 60 %.

The animal pests mentioned include, for example:

from the order Lepidoptera, for example,

Acleris spp., *Adoxophyes* spp., *Aegeria* spp., *Agrotis* spp., *Alabama argillaceae*, *Amylois* spp., *Anticarsia gemmatilis*, *Archips* spp., *Argyrotaenia* spp., *Autographa* spp., *Busseola fusca*, *Cadra cautella*, *Carposina nipponensis*, *Chilo* spp., *Choristoneura* spp., *Clysia ambiguella*, *Cnaphalocrocis* spp., *Cnephasia* spp., *Cochylis* spp., *Coleophora* spp., *Crocidolomia binotalis*, *Cryptophlebia leucotreta*, *Cydia* spp., *Diatraea* spp., *Diparopsis castanea*, *Earias* spp., *Ephestia* spp., *Eucosma* spp., *Eupoecilia ambiguella*, *Euproctis* spp., *Euxoa* spp., *Grapholita* spp., *Hedya nubiferana*, *Heliothis* spp., *Hellula undalis*, *Hyphantria cunea*, *Keiferia lycopersicella*, *Leucoptera scitella*, *Lithocollethis* spp., *Lobesia botrana*, *Lymantria* spp., *Lyonetia* spp., *Malacosoma* spp., *Mamestra brassicae*, *Manduca sexta*, *Operophtera* spp., *Ostrinia nubilalis*, *Pammene* spp., *Pandemis* spp., *Panolis flammea*, *Pectinophora gossypiella*, *Phthorimaea operculella*, *Pieris rapae*, *Pieris* spp., *Plutella xylostella*, *Prays* spp., *Scirpophaga* spp., *Sesamia* spp., *Sparganothis* spp., *Spodoptera* spp., *Synanthedon* spp., *Thaumatopoea* spp., *Tortrix* spp., *Trichoplusia ni* and *Yponomeuta* spp.;

from the order Coleoptera, for example,

Agriotes spp., *Anthonomus* spp., *Atomaria linearis*, *Chaetocnema tibialis*, *Cosmopolites* spp., *Curculio* spp., *Dermestes* spp., *Diabrotica* spp., *Epilachna* spp., *Eremnus* spp., *Leptinotarsa decemlineata*, *Lissorhoptrus* spp., *Melolontha* spp., *Orycaephilus* spp., *Otiornychus* spp., *Phlyctinus* spp., *Popillia* spp., *Psylliodes* spp., *Rhizopertha* spp., *Scarabaeidae*, *Sitophilus* spp., *Sitotroga* spp., *Tenebrio* spp., *Tribolium* spp. and *Trogoderma* spp.;

from the order Orthoptera, for example,

Blatta spp., *Blattella* spp., *Gryllotalpa* spp., *Leucophaea maderae*, *Locusta* spp., *Periplaneta* spp. and *Schistocerca* spp.;

from the order Isoptera, for example,

Reticulitermes spp.;

from the order Psocoptera, for example,

Liposcelis spp.;

from the order Anoplura, for example,

Haematopinus spp., *Linognathus* spp., *Pediculus* spp., *Pemphigus* spp. and *Phylloxera* spp.;

from the order Mallophaga, for example,

Damalinea spp. and *Trichodectes* spp.;

from the order Thysanoptera, for example,

Frankliniella spp., *Hercinothrips* spp., *Taeniothrips* spp., *Thrips palmi*, *Thrips tabaci* and *Scirtothrips aurantii*;

from the order Heteroptera, for example,

Cimex spp., *Distantiella theobroma*, *Dysdercus* spp., *Euchistus* spp. *Eurygaster* spp.

Leptocorisa spp., *Nezara* spp., *Piesma* spp., *Rhodnius* spp., *Sahlbergella singularis*,

Scotinophara spp. and *Triatoma* spp.;

from the order Homoptera, for example,

Aleurothrixus floccosus, *Aleyrodes brassicae*, *Aonidiella* spp., *Aphididae*, *Aphis* spp.,

Aspidiotus spp., *Bemisia tabaci*, *Ceroplaster* spp., *Chrysomphalus aonidium*,

Chrysomphalus dictyospermi, *Coccus hesperidum*, *Empoasca* spp., *Eriosoma lanigerum*,

Erythroneura spp., *Gascardia* spp., *Laodelphax* spp., *Lecanium corni*, *Lepidosaphes* spp.,

Macrosiphus spp., *Myzus* spp., *Nephotettix* spp., *Nilaparvata* spp., *Paratoria* spp.,

Pemphigus spp., *Planococcus* spp., *Pseudaulacaspis* spp., *Pseudococcus* spp., *Psylla*

spp., *Pulvinaria aethiopica*, *Quadraspidotus* spp., *Rhopalosiphum* spp., *Saissetia* spp.,

Scapholdeus spp., *Schizaphis* spp., *Sitobion* spp., *Trialeurodes vaporariorum*, *Trioza*

erytraeae and *Unaspis citri*;

from the order Hymenoptera, for example,

Acromymex, *Atta* spp., *Cephus* spp., *Diprion* spp., *Diprionidae*, *Gilpinia polytoma*,

Hoplocampa spp., *Lasius* spp., *Monomorium pharaonis*, *Neodiprion* spp., *Solenopsis* spp.

and *Vespa* spp.;

from the order Diptera, for example,

Aedes spp., *Antherigona soccata*, *Bibio hortulanus*, *Calliphora erythrocephala*, *Ceratitis*

spp., *Chrysomyia* spp., *Culex* spp., *Cuterebra* spp., *Dacus* spp., *Drosophila melanogaster*,

Fannia spp., *Gastrophilus* spp., *Glossina* spp., *Hypoderma* spp., *Hyppobosca* spp.,

Liriomyza spp., *Lucilia* spp., *Melanagromyza* spp., *Musca* spp., *Oestrus* spp., *Orseolia* spp., *Oscinella* frit, *Pegomyia hyoscyami*, *Phorbia* spp., *Rhagoletis pomonella*, *Sclara* spp., *Stomoxys* spp., *Tabanus* spp., *Tannia* spp. and *Tipula* spp.;
from the order Siphonaptera, for example,
Ceratophyllus spp. and *Xenopsylla cheopis*;
from the order Thysanura, for example,
Lepisma saccharina and
from the order Acarina, for example,
Acarus siro, *Aceria sheldoni*, *Aculus schlehtendall*, *Amblyomma* spp., *Argas* spp.,
Boophilus spp., *Brevipalpus* spp., *Bryobia praetiosa*, *Calipitimerus* spp., *Chorioptes* spp.,
Dermanyssus gallinae, *Eotetranychus carpin*, *Eriophyes* spp., *Hyalomma* spp., *Ixodes* spp.,
Olygonychus pratensis, *Omlithodoros* spp., *Panonychus* spp., *Phyllocoptruta oleivora*,
Polyphagotarsonemus latus, *Psoroptes* spp., *Rhipicephalus* spp., *Rhizoglyphus* spp.,
Sarcoptes spp., *Tarsonemus* spp. and *Tetranychus* spp..

The phytopathogenic fungi mentioned include, for example:
from the class of Fungi imperfecti, for example,
Botrytis spp., *Pyricularia* spp., *Helminthosporium* spp., *Fusarium* spp., *Septoria* spp.,
Cercospora spp. and *Alternaria* spp.;
from the class of Basidiomycetes, for example,
Rhizoctonia spp., *Hemileia* spp. and *Puccinia* spp.;
from the class of Ascomycetes, for example,
Venturia spp., *Erysiphe* spp., *Podosphaera* spp., *Monilinia* spp. and *Uncinula* spp.; and
from the class of Oomycetes, for example,
Phytophthora spp., *Pythium* spp. and *Plasmopara* spp..

Using the active compounds according to the invention, in particular, pests of the type mentioned which occur on plants, in particular on useful and ornamental plants in agriculture, in horticulture and in forestry, or on parts, such as fruit, blossom, foliage, stems, tubers or roots, of such plants can be controlled, i.e. checked or destroyed, in some cases parts of plants which grow on later also additionally being protected against these pests.

Target cultures are, in particular, cereals, such as wheat, barley, rye, oats, rice, maize or sorghum; beet, such as sugar-beet or fodder beet; fruit, for example pomaceous fruit, stone

fruit and soft fruit, such as apples, pears, plums, peaches, almonds, cherries or berries, for example strawberries, raspberries or blackberries; pulses, such as beans, lentils, peas or soya; oil crops, such as oilseed rape, mustard, poppy, olive, sunflower, coconut, castor, cacao or groundnut; cucumber plants, such as pumpkins, cucumbers or melons; fibre plants, such as cotton, flax, hemp or jute; citrus fruits, such as oranges, lemons, grapefruit or mandarins; vegetables, such as spinach, lettuce, asparagus, cabbage varieties, carrots, onions, tomatoes, potatoes or capsicums; laurel plants, such as avocado, cinnamonum or camphor; and tobacco, nuts, coffee, aubergines, sugar-cane, tea, pepper, vines, hops, banana plants, natural rubber plants and ornamental plants.

The active compounds according to the invention are particularly suitable for controlling insects and representatives of the order Acarina, in particular phytopathogenic feeding insects, such as *Anthonomus grandis*, *Diabrotica balteata*, *Heliothis virescens* larvae, *Plutella xylostella* and *Spodoptera littoralis* larvae, and spider mites, such as *Tetranychus* spp., in cotton, fruit, maize, soya, rape and vegetable crops.

Other fields of use of the active compounds according to the invention are the protection of stores and warehouses and of material and in the hygiene sector, in particular the protection of pets and productive livestock against pests of the type mentioned.

The invention therefore also relates to pesticides such as, to be chosen according to the required aims and given circumstances, emulsifiable concentrates, suspension concentrates, directly sprayable or dilutable solutions, spreadable pastes, dilute emulsions, soluble powders, dispersible powders, wettable powders, dusts, granules or encapsulations in polymeric substances which comprise - at least - one of the active compounds according to the invention.

The active compound is employed in these compositions in the pure form, a solid active compound, for example, in a specific particle size, or, preferably, together with - at least - one of the auxiliaries customary in formulation technology, such as extenders, for example solvents or solid carriers, or such as surface-active compounds (surfactants). The compositions may also contain UV-stabilizers, such as a benzotriazole-, a benzophenone-, a oxalic acid anilide-, a cinnamic acid- or an s-triazine-derivative.

Solvents are, for example: non-hydrogenated or partly hydrogenated aromatic hydrocarbons, preferably fractions C₈ to C₁₂ of alkylbenzenes, such as xylene mixtures, alkylated naphthalenes or tetrahydronaphthalene, aliphatic or cycloaliphatic hydrocarbons, such as

paraffins or cyclohexane, alcohols, such as ethanol, propanol or butanol, glycols and ethers and esters thereof, such as propylene glycol, dipropylene glycol ether, ethylene glycol or ethylene glycol monomethyl or -ethyl ether, ketones, such as cyclohexanone, isophorone or diacetone alcohol, strongly polar solvents, such as N-methylpyrrolid-2-one, dimethyl sulfoxide or N,N-dimethylformamide, water, non-epoxidized or epoxidized plant oils, such as non-epoxidized or epoxidized rapeseed, castor, coconut or soya oil, and silicone oils.

The solid carriers used, for example for dusts and dispersible powders, are as a rule natural rock powders, such as calcite, talc, kaolin, montmorillonite or attapulgite. Highly disperse silicic acids or highly disperse absorbent polymers can also be added to improve the physical properties. Granular adsorptive granule carriers are porous types, such as pumice, crushed brick, sepiolite or bentonite, and non-sorbent carrier materials are calcite or sand. A large number of granular materials of inorganic or organic nature can furthermore be used, in particular dolomite or comminuted plant residues.

Surface-active compounds are, depending on the nature of the active compound to be formulated, nonionic, cationic and/or anionic surfactants or surfactant mixtures with good emulsifying, dispersing and wetting properties. The surfactants listed below are to be regarded only as examples; many other surfactants which are customary in formulation technology and are suitable according to the invention are described in the relevant literature.

Nonionic surfactants are, in particular, polyglycol ether derivatives of aliphatic or cycloaliphatic alcohols, saturated or unsaturated fatty acids and alkylphenols, which can contain 3 to 30 glycol ether groups and 8 to 20 carbon atoms in the (aliphatic) hydrocarbon radical and 6 to 18 carbon atoms in the alkyl radical of the alkylphenols. Substances which are furthermore suitable are water-soluble polyethylene oxide adducts, containing 20 to 250 ethylene glycol ether and 10 to 100 propylene glycol ether groups, on propylene glycol, ethylene diaminopolypropylene glycol and alkyl polypropylene glycol having 1 to 10 carbon atoms in the alkyl chain. The compounds mentioned usually contain 1 to 5 ethylene glycol units per propylene glycol unit. Examples are nonylphenol-polyethoxyethanols, castor oil polyglycol ethers, polypropylene-polyethylene oxide adducts, tributylphenoxypolyethoxyethanol, polyethylene glycol and octylphenoxypolyethoxyethanol. Other substances are fatty acid esters of polyoxyethylene sorbitan, such as polyoxyethylene sorbitan trioleate.

The cationic surfactants are, in particular, quaternary ammonium salts which contain, as substituents, at least one alkyl radical having 8 to 22 C atoms and, as further substituents, lower, non-halogenated or halogenated alkyl, benzyl or lower hydroxyalkyl radicals. The salts are preferably in the form of halides, methyl-sulfates or ethyl-sulfates. Examples are stearyl-trimethyl-ammonium chloride and benzyl-di-(2-chloroethyl)-ethyl-ammonium bromide.

Suitable anionic surfactants can be both water-soluble soaps and water-soluble synthetic surface-active compounds. Suitable soaps are the alkali metal, alkaline earth metal and substituted or unsubstituted ammonium salts of higher fatty acids (C_{10} - C_{22}), such as the sodium or potassium salts of oleic or stearic acid, or of naturally occurring fatty acid mixtures, which can be obtained, for example, from coconut oil or tall oil; and furthermore also the fatty acid methyl-aurine salts. However, synthetic surfactants are more frequently used, in particular fatty sulfonates, fatty sulfates, sulfonated benzimidazole derivatives or alkylarylsulfonates. The fatty sulfonates and sulfates are as a rule in the form of alkali metal, alkaline earth metal or substituted or unsubstituted ammonium salts and in general have an alkyl radical of 8 to 22 C atoms, alkyl also including the alkyl moiety of acyl radicals; examples are the sodium or calcium salt of ligninsulfonic acid, of dodecylsulfuric acid ester or of a fatty alcohol sulfate mixture prepared from naturally occurring fatty acids. These also include the salts of sulfuric acid esters and sulfonic acids of fatty alcohol-ethylene oxide adducts. The sulfonated benzimidazole derivatives preferably contain 2 sulfonic acid groups and a fatty acid radical having about 8 to 22 C atoms. Alkylaryl-sulfonates are, for example, the sodium, calcium or triethanolammonium salts of dodecyl-benzenesulfonic acid, of dibutyl-naphthalenesulfonic acid or of a naphthalenesulfonic acid-formaldehyde condensation product. Corresponding phosphates, such as salts of the phosphoric acid ester of a p-nonylphenol-(4-14)-ethylene oxide adduct or phospholipids, can further also be used.

The compositions as a rule comprise 0.1 to 99 %, in particular 0.1 to 95 %, of active compound and 1 to 99.9 %, in particular 5 to 99.9 %, of - at least - one solid or liquid auxiliary, it being possible as a rule for 0 to 25 %, in particular 0.1 to 20 %, of the composition to be surfactants (% is in each case per cent by weight). While concentrated compositions are more preferred as commercial goods, the end user as a rule uses dilute compositions which comprise considerably lower concentrations of active compound. Preferred compositions are composed, in particular, as follows (% = per cent by weight):

- 42 -

Emulsifiable concentrates:

Active compound:	1 to 90 %, preferably 5 to 20 %
Surfactant:	1 to 30 %, preferably 10 to 20 %
Solvent:	5 to 98 %, preferably 70 to 85 %

Dusts:

Active compound:	0.1 to 10 %, preferably 0.1 to 1 %
Solid carrier:	99.9 to 90 %, preferably 99.9 to 99 %

Suspension concentrates:

Active compound:	5 to 75 %, preferably 10 to 50 %
Water:	94 to 24 %, preferably 88 to 30 %
Surfactant:	1 to 40 %, preferably 2 to 30 %

Wettable powders:

Active compound:	0.5 to 90 %, preferably 1 to 80 %
Surfactant:	0.5 to 20 %, preferably 1 to 15 %
Solid carrier:	5 to 99 %, preferably 15 to 98 %

Granules:

Active compound:	0.5 to 30 %, preferably 3 to 15 %
Solid carrier:	99.5 to 70 %, preferably 97 to 85 %

The action of the compositions according to the invention can be extended considerably and adapted to given circumstances by addition of other insecticidal, acaricidal and/or fungicidal active compounds. Active compound additions here are, for example, representatives of the following classes of active compounds: organic phosphorus compounds, nitrophenols and derivatives, formamidines, ureas, carbamates, pyrethroids, chlorinated hydrocarbons and *Bacillus thuringiensis* preparations. The compositions according to the invention can also comprise further solid or liquid auxiliaries, such as stabilizers, for example non-epoxidized or epoxidized vegetable oils (for example epoxidized coconut oil, rapeseed oil or soya oil), defoamers, for example silicone oil, preservatives, viscosity regulators, binders and/or tackifiers, as well as fertilizers or other

active compounds for achieving special effects, for example bactericides, nematocides, molluscicides or selective herbicides.

The compositions according to the invention are prepared in a known manner, in the absence of auxiliaries, for example, by grinding and/or sieving a solid active compound or active compound mixture, for example to a particular particle size, and if at least one auxiliary is present, for example, by intimate mixing and/or grinding of the active compound or active compound mixture with the auxiliary or auxiliaries. The invention likewise relates to these processes for the preparation of the compositions according to the invention and the use of the compounds of the formula (I) for the preparation of these compositions.

The invention furthermore relates to the methods of application for the compositions, i.e. the methods for controlling pests of the type mentioned, such as, to be chosen according to the intended aims and given circumstances, spraying, atomizing, dusting, brushing, dressing, scattering or pouring, and to the use of the compositions for controlling pests of the type mentioned. Typical rates of concentration here are between 0.1 and 1000 ppm, preferably between 0.1 and 500 ppm, of active compound. The rates of application per hectare are in general 1 to 2000 g of active compound per hectare, in particular 10 to 1000 g/ha, preferably 20 to 600 g/ha.

A preferred method of application in the field of crop protection is application to the foliage of the plants (foliar application), where the application frequency and rate of application can be determined according to the danger of infestation by the particular pests. However, the active compound can also enter the plants via the root system (systemic action) by soaking the locus of the plants with a liquid composition or incorporating the active compound in solid form into the locus of the plants, for example into the soil, for example in the form of granules (soil application). In paddy rice crops, such granules can be metered into the flooded rice field.

The compositions according to the invention are also suitable for protection of plant propagation material, for example seed, such as fruit, tubers or grain, or plant seedlings, against fungal infections and animal pests. In this case, the propagation material can be treated with the composition before planting out, and seed, for example, can be dressed before sowing. The active compounds according to the invention can also be applied to seed grains (coating) either by soaking the grains in a liquid composition or coating them with a solid composition. The composition can also be applied to the site of planting out during

planting out of the propagation material, for example into the seed furrow during sowing. The invention furthermore relates to these treatment methods for plant propagation material and the plant propagation material thus treated.

The following examples serve to illustrate the invention. They do not limit the invention. Temperatures are stated in degrees Celsius.

Preparation Examples

Example H1: Methyl 2-[[[(1-methyl-2-(4-(3-trifluoromethylphenylmethoxy)-phenyl)-2-E-[ethoxyimino]ethylidene)amino]oxy]methyl]- α -(methoxymethylene)-phenylacetate and methyl 2-[[[(1-methyl-2-(4-(3-trifluoromethylphenylmethoxy)-phenyl)-2-Z-[ethoxyimino]ethylidene)amino]oxy]methyl]- α -(methoxymethylene)-phenylacetate (compounds A.1 in Table 7)

a) 1-[4-(3-Trifluoromethylphenylmethoxy)-phenyl]-1-propanone

172 g of 1-(chloromethyl)-3-(trifluoromethyl)-benzene are slowly added to a mixture of 120 g of 1-(4-hydroxyphenyl)-1-propanone, 2.21 g of potassium carbonate and 500 ml of N,N-dimethylformamide at room temperature. Thereafter, the reaction mixture is stirred at 60° for 1 hour and then cooled and filtered, and the filtrate is evaporated in vacuo. The residue is dissolved in ethyl acetate and the organic phase is washed twice with water and once with saturated sodium chloride solution, dried with sodium sulfate and evaporated. The crude product is stirred up with 500 ml of hexane and cooled, filtered off and dried in vacuo. Pure 1-[4-(3-trifluoromethylphenylmethoxy)-phenyl]-1-propanone with a melting point of 63-4° is thus obtained.

b) 1-[4-(3-trifluoromethylphenylmethoxy)-phenyl]-1,2-propanedione 2-oxime

107 g of isopentyl nitrite are slowly added dropwise to a solution of 234.3 g of 1-[4-(3-trifluoromethylphenylmethoxy)-phenyl]-1-propanone in 1500 ml of 1,4-dioxane acidified with hydrochloric acid gas. The reaction mixture is then stirred at room temperature for 1.5 hours, subsequently rendered alkaline with triethylamine and evaporated in vacuo. The residue is dissolved in ethyl acetate and the organic phase is washed twice with water and once with saturated sodium chloride solution, dried with sodium sulfate and evaporated. The crude product is suspended in hexane, filtered off and dried in vacuo. 1-[4-(3-trifluoromethylphenylmethoxy)-phenyl]-1,2-propanedione 2-oxime with a melting point of 137-8° is thus obtained.

c) 1-[4-(3-trifluoromethylphenylmethoxy)-phenyl]-1,2-propanedione 1-E-[ethyloxime]-2-oxime and 1-[4-(3-trifluoromethylphenylmethoxy)-phenyl]-1,2-propanedione 1-Z-[ethyloxime]-2-oxime

A mixture of 67.4 g of 1-[4-(3-trifluoromethylphenylmethoxy)-phenyl]-1,2-propanedione 2-oxime and 19.5 g of O-ethylhydroxylamine hydrochloride in 300 ml of pyridine is refluxed for 1.5 hours. After cooling, 1000 ml of toluene are added to the reaction mixture and the mixture is evaporated in vacuo. The residue is dissolved in ethyl acetate and the organic phase is washed twice with water and once with saturated sodium chloride solution, dried with sodium sulfate and evaporated. The crude product is purified by means of flash chromatography over silica gel (ethyl acetate/hexane 1:3), the two isomeric compounds 1-[4-(3-trifluoromethylphenylmethoxy)-phenyl]-1,2-propanedione 1-E-[ethyloxime]-2-oxime with a melting point of 125-7° and 1-[4-(3-trifluoromethylphenylmethoxy)-phenyl]-1,2-propanedione 1-Z-[ethyloxime]-2-oxime, as a resin, being obtained.

d) Methyl 2-[[[(1-methyl-2-(4-(3-trifluoromethylphenylmethoxy)-phenyl)-2-E-[ethoxyimino]ethylidene)amino]oxy)methyl]- α -(methoxymethylene)-phenylacetate
4.5 g of 1-[4-(3-trifluoromethylphenylmethoxy)-phenyl]-1,2-propanedione 1-E-[ethyloxime]-2-oxime, dissolved in 15 ml of N,N-dimethylformamide, are added dropwise to a suspension of 0.65 g of sodium hydride in 25 ml of N,N-dimethylformamide and the reaction mixture is then stirred at room temperature for 10 minutes. Thereafter, 3.7 g of methyl 2-(bromomethyl)- α -(methoxymethylene)-phenylacetate in 15 ml of N,N-dimethylformamide are added dropwise and the reaction mixture is further stirred at room temperature for 1 hour. Thereafter, the mixture is acidified with acetic acid and evaporated in vacuo. The residue is dissolved in ethyl acetate and the solution is washed three times with water and once with saturated sodium chloride solution, dried with sodium sulfate and evaporated in vacuo. After purification by flash chromatography (silica gel, ethyl acetate/hexane 1:3), the E isomer of the title compound with a melting point of 81-83°C is obtained.

e) Methyl 2-[[[(1-methyl-2-(4-(3-trifluoromethylphenylmethoxy)-phenyl)-2-Z-[ethoxyimino]ethylidene)-amino]oxy)methyl]- α -(methoxymethylene)-phenylacetate

The Z isomer of the title compound is obtained as a viscous oil in a manner analogous to that described in Example H1 d), starting from 1-[4-(3-trifluoromethylphenylmethoxy)-phenyl]-1,2-propanedione 1-Z-[ethyloxime]-2-oxime.

f) Methyl 2-[[[(1-methyl-2-(4-(3-trifluoromethylphenylmethoxy)-phenyl)-2-E-[ethoxyimino]ethylidene)amino]oxy]methyl]- α -(methoxyimino)-phenylacetate

The title compound with a melting point of 68-70°C is obtained in a manner analogous to that described in Example H1 d) from 1-[4-(3-trifluoromethylphenylmethoxy)-phenyl]-1,2-propanedione 1-E-[ethyloxime]-2-oxime and methyl 2-(bromomethyl)- α -(methoxyimino)-phenylacetate.

g) 2-[[[(1-Methyl-2-(4-(3-trifluoromethylphenylmethoxy)-phenyl)-2-E-[ethoxyimino]ethylidene)amino]oxy]methyl]- α -(methoxyimino)-phenylacetic acid methylamide

A mixture of 6.8 g of methyl 2-[[[(1-methyl-2-(4-(3-trifluoromethylphenylmethoxy)-phenyl)-2-E-[ethoxyimino]ethylidene)amino]oxy]methyl]- α -(methoxyimino)-phenylacetate and 4.3 ml of an 8 molar solution of methylamine in ethanol is left to stand at room temperature for 4 days. The mixture is then evaporated in vacuo. The residue is taken up in methyl acetate and the solution is washed with water and saturated sodium chloride solution, dried over sodium sulfate and evaporated in vacuo. The residue is recrystallized from methyl acetate/hexane 1:1. The title compound with a melting point of 130-132°C is obtained.

Example H2: The other compounds listed in Tables 1 to 154 can also be prepared in a manner analogous to that described in Example H1. In the "Physical data" column of Tables 1 to 4, the temperatures stated in each case are the melting point of the compound in question. c.propyl is cyclopropyl.

in which E is $-CH_2-$ and Ar in each case corresponds to a line in Table D.

Example H3: a) Methyl 2-[[[(1-methyl-2-(4-(2-(2,4-dichlorophenyl)ethyl)-phenyl)-2-E-[methoxyimino]ethylidene)amino]oxy]methyl]- α -(methoxymethylene)-phenylacetate

4 g of Pd (10 % on active charcoal) are added to a solution of 4 g of methyl 2-[[[(1-methyl-2-(4-(2-(2,4-dichlorophenyl)ethyl)-phenyl)-2-E-[methoxyimino]ethylidene)amino]oxy]methyl]- α -(methoxymethylene)-phenylacetate in 80 ml of tetrahydrofuran, and 325.17 ml of hydrogen are passed in at 20° under normal pressure. The mixture is now filtered over SiO_2 (Celite) and the filtrate is evaporated. The residue is stirred in diisopropyl ether/petroleum ether 1:2 and the resulting solid is filtered off. The title compound with a melting point of 112-114°C is obtained.

b) Methyl 2-[[[(1-methyl-2-(4-(2-pyrazinyl)ethynyl)-phenyl)-2-E-[methoxyimino]ethylidene)amino]oxy]methyl]- α -(methoxymethylene)-phenylacetate

660 mg of Lindlar catalyst are added to a solution of 2.2 g of methyl 2-[[[(1-methyl-2-(4-(2-pyrazinyl)ethynyl)-phenyl)-2-E-[methoxyimino]ethylidene)amino]oxy]methyl]- α -(methoxymethylene)-phenylacetate in 80 ml of tetrahydrofuran, and 98.6 ml of hydrogen are passed in under normal pressure at

20°. The mixture is filtered under SiO₂ and the filtrate is evaporated. The residue is chromatographed over silica gel (eluent ethyl acetate/hexane 1:1). The title compound is obtained as a colourless resin.

c) Methyl 2-[[[(1-methyl-2-{4-[2-(3-chlorobenzoyl)ethyl]-phenyl)-2-E-[methoxyimino]-ethylidene)amino]oxy]methyl]- α -(methoxyimino)-phenylacetate

880 mg of Raney nickel are added to a solution of 2.8 g of methyl 2-[[[(1-methyl-2-{4-[2-(3-chlorobenzoyl)ethyl]-phenyl)-2-E-[methoxyimino]ethylidene)amino]oxy]methyl]- α -(methoxyimino)-phenylacetate in 80 ml of tetrahydrofuran and 120 ml of ethyl acetate. 219.37 ml of hydrogen are passed in under normal pressure at 20°C. The mixture is filtered over SiO₂ and the filtrate is evaporated. The residue is chromatographed over silica gel (eluent diisopropyl ether/ether 1:1). The title compound with a melting point of 128-130° is obtained.

Example H4: The other compounds listed in Tables 131 to 154 can also be prepared in a manner analogous to that described in Examples H3 a) to c).

Formulation Examples (% = per cent by weight)**Example F1: Emulsion concentrates**

	a)	b)	c)
Active compound	25%	40%	50%
Calcium dodecylbenzenesulfonate	5%	8%	6%
Castor oil polyethylene glycol ether (36 mol of EO)	5%	-	-
Tributylphenol polyethylene glycol ether (30 mol of EO)	-	12%	4%
Cyclohexanone	-	15%	20%
Xylene mixture	65%	25%	20%

Mixing the finely ground active compound and additives results in an emulsion concentrate which gives emulsions of the desired concentration by dilution with water.

Example F2: Solutions

	a)	b)	c)	d)
Active compound	80%	10%	5%	95%
Ethylene glycol monomethyl ether	20%	-	-	-
Polyethylene glycol (MW 400)	-	70%	-	-
N-Methylpyrrolid-2-one	-	20%	-	-
Epoxidized coconut oil	-	-	1%	5%
Benzine (boiling limits: 160-190)	-	-	94%	-

Mixing of the finely ground active compound and the additives results in a solution which is suitable for application in the form of tiny drops.

Example F3: Granules

a)	b)	c)	d)
----	----	----	----

- 95 -

Active compound	5%	10%	8%	21%
Kaolin	94%	-	79%	54%
Highly disperse silicic acid	1%	-	13%	7%
Attapulgate	-	90%	-	18%

The active compound is dissolved in methylene chloride, the solution is sprayed onto the carrier mixture and the solvent is evaporated off in vacuo.

Example F4: Dusts

	a)	b)
Active compound	2%	5%
Highly disperse silicic acid	1%	5%
Talc	97%	-
Kaolin	-	90%

Mixing of the active compound and carriers results in ready-to-use dusts.

Example F5: Wettable powders

	a)	b)	c)
Active compound	25%	50%	75%
Sodium lignin-sulfonate	5%	5%	-
Sodium lauryl sulfate	3%	-	5%
Sodium diisobutylphenathalenesulfonate	-	6%	10%
Octylphenol polyethylene glycol ether (7-8 mol of EO)	-	2%	-
Highly disperse silicic acid	5%	10%	10%
Kaolin	62%	27%	-

The active compound and additives are mixed and the mixture is ground in a suitable mill. Wettable powders which can be diluted with water to give suspensions of the desired concentration are obtained.

Example F6: Emulsion concentrate

Active compound	10%
Octylphenol polyethylene glycol ether (4-5 mol of EO)	3%
Calcium dodecylbenzenesulfonate	3%
Castor oil polyethylene glycol ether (36 mol of EO)	4%
Cyclohexanone	30%
Xylene mixture	50%

Mixing of the finely ground active compound and the additives results in an emulsion concentrate which gives emulsions of the desired concentration by dilution with water.

- 96 -

Example F7: Dusts

	a)	b)
Active compound	5%	8%
Talc	95%	-
Kaolin	-	92%

Ready-to-use dusts are obtained by mixing the active compound and carrier and grinding the mixture in a suitable mill.

Example F8: Extruded granules

Active compound	10%
Sodium lignin-sulfonate	2%
Carboxymethylcellulose	1%
Kaolin	87%

The active compound and additives are mixed, the mixture is ground, moistened with water, extruded and granulated and the granules are dried in a stream of air.

Example F9: Coated granules

Active compound	3%
Polyethylene glycol (MW 200)	3%
Kaolin	94%

Uniform application of the finely ground active compound to the kaolin moistened with polyethylene glycol in a mixer results in dust-free coated granules.

Example F10: Suspension concentrate

Active compound	40%
Ethylene glycol	10%
Nonylphenol polyethylene glycol ether (15 mol of EO)	6%
Sodium ligninsulfonate	10%
Carboxymethylcellulose	1%
Aqueous formaldehyde solution (37%)	0.2%
Aqueous silicone oil emulsion (75%)	0.8%
Water	32%

Mixing of the finely ground active compound and the additives results in a suspension concentrate which gives suspensions of the desired concentration by dilution with water.

Biological Examples

A) Microbicidal action**Example B1: Action against *Phytophthora infestans* on tomatoes****a) Curative action**

After being grown for three weeks, tomato plants of the "Roter Gnom" variety are sprayed with a zoospore suspension of the fungus and incubated in a booth at 18 to 20° and saturated atmospheric humidity. Interruption of the humidification after 24 hours. After the plants have dried off, they are sprayed with a liquor which comprises the active substance, formulated as a wettable powder, in a concentration of 200 ppm. After the spray coating has dried on, the plants are placed in the humidity booth again for 4 days. The number and size of the typical leaf spots which have occurred after this time are the standard for evaluation of the activity of the substances tested.

b) Preventive systemic action

The active substance, formulated as a wettable powder, is introduced in a concentration of 60 ppm (based on the soil volume) onto the soil surface of potted tomato plants of the "Roter Gnom" variety three weeks old. After a waiting time of three days, the underside of the leaves of the plants is sprayed with a zoospore suspension of *Phytophthora infestans*. The plants are then kept in a spray booth at 18 to 20°C and saturated atmospheric humidity for 5 days. After this time, typical leaf spots form, the number and size of which are used to evaluate the activity of the substances tested.

While untreated but infected control plants show an infestation of 100 %, in both tests the infestation is suppressed to 20 % or less with the active compounds of Tables 1 to 118. In particular, the infestation is even completely suppressed at a concentration of 20 ppm of the active substance with the compounds 1.3, 1.4, 1.13, 1.19, 1.20, 1.30, 1.31, 1.33, 1.48 to 1.57, 1.62 to 1.72, 1.75A, 1.78 to 1.80, 2.21 to 2.25, 2.27, 2.32, 2.35 to 2.52, 2.55, 2.58, 2.59 to 3.26, 3.33 to 3.39, 3.43 to 3.54, 3.56, 3.60, 4.3, 4.57 and 4.60.

Example B2: Action against *Plasmopara viticola* (Bert. et Curt.) (Bert. et De Toni) on vines**a) Residual preventive action**

Vine cuttings of the "Chasselas" variety are grown on in a greenhouse. At the 10 -leaf stage, 3 plants are sprayed with a liquor (200 ppm of active compound). After the spray coating has dried on, the plants are infected uniformly with the spore suspension of the fungus on the underside of the leaves. The plants are then kept in a humidity chamber for 8 days.

After this time, clear symptoms of disease are found on the control plants. The number and size of the infection sites on the treated plants are used as a standard for evaluating the activity of the substances tested.

b) Curative action

Vine cuttings of the "Chasselas" variety are grown on in a greenhouse and, at the 10 -leaf stage, are infected with a spore suspension of *Plasmopara viticola* on the underside of the leaves. After remaining in a humidity chamber for 24 hours, the plants are sprayed with an active compound liquor (200 ppm, 60 ppm, 20 ppm of active compound). The plants are then kept in the humidity booth for a further 7 days. After this time, symptoms of disease are found on the control plants. The number and size of the infection sites on the plants treated are used as a standard for evaluating the activity of the substances tested.

Compared with the control plants, the plants treated with active compounds of Tables 1 to 118 show an infestation of 20 % or less. In particular, even at a concentration of 20 ppm of the active substance, a complete curative action is still achieved with the compounds 1.3, 1.4, 1.13, 1.29, 1.30, 1.31, 1.33, 1.52, 1.63B, 1.71A, 1.71B, 1.73A, 1.73B, 1.78, 2.21, 2.22, 2.25, 2.27, 2.33, 2.45, 2.49, 2.55, 2.58, 3.21, 3.43, 3.46, 3.56, 4.3, 4.57, 4.58, 4.60 and 4.65.

Example B3: Action against *Pythium debaryanum* on sugar beet (*Beta vulgaris*)

a) Action after soil application

The fungus is cultured on sterile oat grains and added to an earth-sand mixture. The earth thus infected is introduced into flower pots and sown with sugar beet seeds. Directly after sowing, the test preparations, formulated as wettable powders, are poured over the earth as an aqueous suspension (20 ppm of active compound, based on the volume of earth). The pots are then placed in a greenhouse at 20 -24°C for 2-3 weeks. The earth is constantly kept uniformly moist by gentle spraying with water. In the evaluation of the tests, the emergence of the sugar beet plants and the proportion of healthy and sick plants are determined.

b) Action after dressing application

The fungus is cultured on sterile oat grains and added to an earth-sand mixture. The earth thus infected is introduced into flower pots and sown with sugar beet seeds which have been dressed with the test preparations, formulated as dressing powders (1000 ppm of active compound, based on the seed weight). The sown pots are placed in a greenhouse at

20-24°C for 2-3 weeks. During this period, the soil is kept uniformly moist by gentle spraying with water.

In the evaluation, the emergence of the sugar beet plants and the proportion of healthy and sick plants is determined.

After the treatment with active compounds of Tables 1 to 118, more than 80 % of the plants emerge and have a healthy appearance. In the control pots, only isolated emerged plants with a sickly appearance are observed.

Example B4: Residual protective action against *Cercospora arachidicola* on groundnuts

Groundnut plants 10 to 15 cm high are sprayed with an aqueous spray liquor (0.02 % of active substance) until dripping wet, and 48 hours later are infected with a conidia suspension of the fungus. The plants are incubated at 21°C and high atmospheric humidity for 72 hours and then placed in a greenhouse until the typical leaf spots occur. The action of the active substance is evaluated 12 days after infection on the basis of the number and size of the leaf spots.

The active compounds of Tables 1 to 118 cause a reduction in the leaf spots to less than about 10 % of the leaf surface. In particular, the diseases is suppressed completely (0 -5 % infestation) with compounds 1.49 to 1.72, 1.79, 2.20 to 2.24, 2.35 to 2.39, 2.44 to 2.52, 2.59, 3.22 to 3.24, 3.34 to 3.39, 3.45 to 3.60 and 3.62.

Example B5: Action against *Puccinia graminis* on wheat

a) Residual protective action

6 Days after sowing, wheat plants are sprayed with an aqueous spray liquor (0.02 % of active substance) until dripping wet, and 24 hours later are infected with a uredo spore suspension of the fungus. After an incubation time of 48 hours (conditions: 95 to 100 % relative atmospheric humidity at 20°C), the plants are placed in a greenhouse at 22°C. The development of rust pustules is evaluated 12 days after infection.

b) Systemic action

5 Days after sowing, wheat plants are watered with an aqueous spray liquor (0.006 % of active substance, based on the soil volume). It is ensured here that the spray liquor does not come into contact with the above-ground parts of the plants. 48 hours later, the plants are infected with a uredo spore suspension of the fungus. After an incubation time of 48 hours (conditions: 95 to 100 per cent relative atmospheric humidity at 20°C), the plants are

placed in a greenhouse at 22°C. The development of rust pustules is evaluated 12 days after infection.

The compounds of Tables 1 to 118 cause a significant reduction in the fungus infestation, sometimes to 10-0 %. In particular, the disease is suppressed completely (0-5 % infestation) with compounds 1.51, 1.57, 1.62 to 1.64, 1.79, 2.22, 2.23, 2.35, 2.39, 2.44, 2.45, 2.49, 2.52, 2.59, 3.22 to 3.24, 3.35, 3.39, 3.45 to 3.67, 3.50, 3.53 and 3.60.

Example B6: Action against *Pyricularia oryzae* on rice

a) Residual protective action

After being grown for two weeks, rice plants are sprayed with an aqueous spray liquor (0.02 % of active substance) until dripping wet, and 48 hours later are infected with a conidia suspension of the fungus. The fungus infestation is evaluated 5 days after infection, during which 95 to 100 % relative atmospheric humidity and a temperature of 22°C are maintained.

b) Systemic action

Rice plants 2 weeks old are watered with an aqueous spray liquor (0.006 % of active substance, based on the soil volume). It is ensured here that the spray liquor does not come into contact with above-ground parts of the plants. The pots are then filled with water such that the lowest parts of the stems of the rice plants are standing in the water. After 96 hours, the plants are infected with a conidia suspension of the fungus and kept at 95 to 100 % relative atmospheric humidity and a temperature of 24°C for 5 days.

The compounds of Tables 1 to 118 for the most part prevent the outbreak of the disease on the infected plants. In particular, the disease is suppressed completely (0-5 % infestation) with the compounds 1.51, 1.57, 1.62 to 1.64, 1.79, 2.22, 2.23, 2.35, 2.39, 2.44, 2.45, 2.49, 2.52, 2.59, 3.22 to 3.24, 3.35, 3.39, 3.45 to 3.67, 3.50, 3.53 and 3.60.

Example B7: Residual protective action against *Venturia inaequalis* on apples

Apple seedlings with fresh shoots 10 to 20 cm long are sprayed with a spray liquor (0.02 % of active substance) until dripping wet, and 24 hours later are infected with a conidia suspension of the fungus. The plants are incubated at 90 to 100 % relative atmospheric humidity for 5 days and placed in a greenhouse at 20° to 24°C for a further 10 days. The scab infestation is evaluated 15 days after infection.

The compounds of Tables 1 to 118 predominantly display a lasting action against scab diseases.

Example B8: Action against Erysiphe graminis on barley

a) Residual protective action

Barley plants approximately 8 cm high are sprayed with an aqueous spray liquor (0.02 % of active substance) until dripping wet, and 3 to 4 hours later are dusted with conidia of the fungus. The infected plants are placed in a greenhouse at 22°C. The fungus infestation is evaluated 10 days after infection.

b) Systemic action

Barley plants approximately 8 cm high are watered with an aqueous spray liquor (0.002 % of active substance, based on the soil volume). It is ensured here that the spray liquor does not come into contact with the above-ground parts of the plants. 48 hours later, the plants are dusted with conidia of the fungus. The infected plants are placed in a greenhouse at 22°C. The fungus infestation is evaluated 10 days after infection.

The compounds of Tables 1 to 118 are capable generally of suppressing the disease infestation to less than 20 %, and in some cases even completely.

Example B9: Action against Podosphaera leucotricha on apple shoots

Residual protective action

Apple seedlings with fresh shoots about 15 cm long are sprayed with a spray liquor (0.06 % of active substance). After 24 hours, the treated plants are infected with a conidia suspension of the fungus and placed in a climatically controlled chamber at 70 % relative atmospheric humidity and 20°C. The fungus infestation is evaluated 12 days after infection.

The disease infestation is prevented to below 20 % with active compounds of Tables 1 to 118. Control plants are infested to the extent of 100 %.

Example B10: Action against Botrytis cinerea on apple fruit. Residual protective action

Artificially damaged apples are treated by dripping a spray liquor (0.02 % of active substance) onto the damaged areas. The treated fruits are then inoculated with a spore suspension of the fungus and incubated at high atmospheric humidity and about 20°C for 1

week. The fungicidal action of the test substance is deduced from the number of damaged areas which have started to rot.

Active compounds of Tables 1 to 118 are capable of preventing the spread of the rot, in some cases completely.

Example B11: Action against *Helminthosporium gramineum*

Wheat grains are contaminated with a spore suspension of the fungus and left to dry. The contaminated grains are dressed with a suspension of the test substance (600 ppm of active compound, based on the weight of the seed). After 2 days, the grains are laid out on suitable agar dishes, and after a further 4 days the development of the fungus colonies around the grains is evaluated. The number and size of the fungus colonies are used to evaluate the test substance.

Compounds of Tables 1 to 118 in some cases show a good action, i.e. inhibition of the fungus colonies. In particular, the disease is suppressed completely (0-5 % infestation) with compounds 1.51, 1.62 to 1.64, 2.22, 2.23, 2.39, 2.44, 2.49, 2.52, 3.22 to 3.24, 3.35, 3.45 to 3.67, 3.53 and 3.60.

Example B12: Action against *Colletotrichum lagenarium* on cucumbers

After being grown for 2 weeks, cucumber plants are sprayed with a spray liquor (concentration 0.002 %). After 2 days, the plants are infected with a spore suspension (1.5×10^5 spores/ml) of the fungus and incubated at 23°C and high atmospheric humidity for 36 hours. The incubation is then continued under normal atmospheric humidity at about 22-23°C. The fungus infestation which has occurred is evaluated 8 days after infection. Untreated but infected control plants show a fungus infestation of 100 %.

The compounds of Tables 1 to 118 cause in some cases an almost complete inhibition of the disease infestation.

Example B13: Action against *Fusarium nivale* on rye

Rye of the Tetrahell variety naturally infected with *Fusarium nivale* is dressed on a mixing roll with the fungicide to be tested, the following concentrations being applied: 20 or 6 ppm of active substance (based on the weight of the seed).

The infected and treated rye is sown in October in the open with a sowing machine on plots of 3 m length and 6 seed rows. 3 repeats per concentration.

Until the infestation is evaluated, the test crop is cultured under normal field conditions (preferably in a region with blanket snow cover during the winter months).

To evaluate the phytotoxicity, the seed emergence is rated in Autumn and the crop densities/stocking is rated in Spring.

To determine the activity of the active compound, the percentage proportion of *Fusarium*-infested plants is counted in the Spring, immediately after melting of the snow. The number of infested plants was less than 5 % in the present case. The plants which had emerged had a healthy appearance. In particular, the disease is suppressed completely (0 -5 % infestation) with compounds 1.57, 1.62 to 1.64, 1.79, 2.23, 2.35, 2.39, 2.44, 2.49, 2.52, 2.59, 3.22 to 3.24, 3.39, 3.45 to 3.67, 3.53 and 3.60.

Example B14: Action against *Septoria nodorum* on wheat

Wheat plants are sprayed in the 3-leaf stage with a spray liquor (60 ppm of active substance) prepared from a wettable powder of the active substances (2.8:1).

After 24 hours, the treated plants are infected with a conidia suspension of the fungus. The plants are then incubated at 90 -100 % relative atmospheric humidity for 2 days and placed in a greenhouse at 20-24°C for a further 10 days. 13 days after infection, the fungus infestation is evaluated. Less than 1 % of the wheat plants show an infestation.

Example B15: Action against *Rhizoctonia solani* on rice

Protective local soil application:

Rice plants 10 days old are watered thoroughly with a suspension (spray liquor) prepared from the formulated test substance, without contaminating the above-ground parts of the plants. The plants are infected three days later by placing a barley straw infected with *Rhizoctonia solani* between the rice plants in each pot. After incubation in a climatically controlled chamber at a daytime temperature of 29°C and night time temperature of 26°C and 95 % relative atmospheric humidity for 6 days, the fungus infestation is evaluated. Less than 5 % of the rice plants showed an infestation. The plants had a healthy appearance.

Protective local leaf application

Rice plants 12 days old are sprayed with a suspension prepared from the formulated test substances. The plants are infected one day later by placing a barley straw infected with *Rhizoctonia solani* between the rice plants in each pot. After incubation in a climatically controlled chamber at a daytime temperature of 29°C and night time temperature of 26°C and

95 % relative atmospheric humidity for 6 days, the test plants are rated. Untreated but infected control plants show a fungus infestation of 100 %. The compounds of Tables 1 to 118 in some cases cause complete inhibition of the disease infestation.

B. Insecticidal action

Example B16: Action against *Aphis craccivora*

Pea seedlings are infected with *Aphis craccivora*, subsequently sprayed with a spray liquor comprising 100 ppm of active compound and then incubated at 20°C. 3 and 6 days later, the percentage reduction in population (% action) is determined by comparing the number of dead aphids on the treated and untreated plants.

The compounds of Tables 1 to 118 in most cases show a good action in this test. In particular, compounds 1.9, 4.5, 4.16, 4.17, 4.20, 4.25 to 4.32, 4.47 and 4.141 to 4.146 show an action of more than 80 % in this test.

Example B17: Action against *Diabrotica balteata*

Maize seedlings are sprayed with an aqueous emulsion spray liquor comprising 100 ppm of active compound and, after the spray coating has dried on, are populated with 10 larvae of the second stage of *Diabrotica balteata* and then placed in a plastic container. 6 days later, the percentage reduction in population (% action) is determined by comparing the number of dead larvae between the treated and untreated plants.

The compounds of Tables 1 to 118 show a good action in this test. In particular, compounds 1.9, 2.31, 4.4, 4.5, 4.6, 4.16, 4.17, 4.20, 4.25, 4.34, 4.39, 4.40 to 4.47, 4.141, 4.144 and 4.146 show an action of more than 80 % in this test.

Example B18: Action against *Heliothis virescens*

Young soya plants are sprayed with an aqueous emulsion spray liquor comprising 100 ppm of active compound and, after the spray coating has dried on, are populated with 10 caterpillars of the first stage of *Heliothis virescens* and then placed in a plastic container. 6 days later, the percentage reduction in population and the feeding damage (% action) are determined by comparing the number of dead caterpillars and the feeding damage between the treated and untreated plants.

Most of the compounds of Tables 1 to 118 show a good action in this test. In particular, compounds 1.9, 2.31, 4.5, 4.20, 4.29, 4.33, 4.39, 4.40 to 4.47, 4.141, 4.144 and 4.146 show an action of more than 80 % in this test.

Example B19: Action against *Spodoptera littoralis*

Young soya plants are sprayed with an aqueous emulsion spray liquor comprising 100 ppm of active compound and, after the spray coating has dried on, are populated with 10 caterpillars of the third stage of *Spodoptera littoralis* and then placed in a plastic container. 3 days later, the percentage reduction in population and the percentage reduction in feeding damage (% action) are determined by comparing the number of dead caterpillars and the feeding damage between the treated and untreated plants.

The compounds of Tables 1 to 118 show a good action in this test. In particular, compounds 1.9, 4.5, 4.16, 4.17, 4.20, 4.25 to 4.32, 4.47 and 4.141 to 4.146 show an action of more than 80 % in this test.

C. Acaricidal action**Example B20: Action against *Tetranychus urticae***

Young bean plants are populated with a mixed population of *Tetranychus urticae*, and 1 day later are sprayed with an aqueous emulsion spray liquor comprising 100 ppm of active compound, incubated at 25°C for 6 days and then evaluated. The percentage reduction in population (% action) is determined by comparing the number of dead eggs, larvae and adults on the treated and untreated plants.

The compounds of Tables 1 to 118 in most cases show a good action in this test. In particular, compounds 1.9, 2.31, 4.5, 4.20, 4.29, 4.33, 4.39, 4.40 to 4.46 and 4.141 to 4.146 show an action of more than 80 % in this test.

WHAT IS CLAIMED IS:

1. A compound of the formula

in which

(A) either

X is CH or N,

Y is OR₁ andZ is O; or

X is N;

Y is NHR₆ and

Z is O, S or S(=O);

R₁ is C₁-C₄alkyl;

R₂ is H, C₁-C₄alkyl, halogeno-C₁-C₄alkyl, C₂-C₆cycloalkyl, C₁-C₄alkoxymethyl, C₁-C₄alkoxy, halogeno-C₁-C₄alkoxy, C₁-C₄alkylthio, halogeno-C₁-C₄alkylthio or CN;

R₃ and R₄ independently of one another are H, C₁-C₄alkyl, C₁-C₄alkoxy, OH, CN, NO₂, a (C₁-C₄alkyl)₃-Si group, where the alkyl groups can be identical or different, halogen, (C₁-C₄alkyl)S(=O)_m, (halogeno-C₁-C₄alkyl)S(=O)_m, halogeno-C₁-C₄alkyl or halogeno-C₁-C₄alkoxy;

R₆ is H or C₁-C₄alkyl;R₆ is methyl, fluoromethyl or difluoromethyl;

m is 0, 1 or 2;

G is O or S; and

A is a direct bond, C₁-C₁₀alkylene, -C(=O)-, -C(=S)- or halogeno-C₁-C₁₀alkylene andR₇ is a radical R₁₀; orA is C₁-C₁₀alkylene, -C(=O)-, -C(=S)- or halogeno-C₁-C₁₀alkylene and

R₇ is -CN, OR₁₀, N(R₁₀)₂, where the radicals R₁₀ can be identical or different, or -S(=O)_pR₁₀;

- R is an unsubstituted or mono- or polysubstituted C₁-C₄alkyl-, C₂-C₄alkenyl-, C₂-C₄alkynyl-, C₃-C₆cycloalkyl-, benzyl-, aryl or heteroaryl-group, where the substituents of the groups independently of one another are chosen from the group consisting of halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, C₁-C₆alkylthio, halogeno-C₁-C₆alkylthio, phenoxy, CN and nitro, or a phenyl radical which is monosubstituted on two adjacent C atoms by an unsubstituted or mono- to tetrasubstituted C₁-C₄alkylenedioxy group, where the substituents are selected from the group consisting of C₁-C₄alkyl and halogen; or CH₂Si(C₁-C₄alkyl)₃, where the alkyl groups can be identical or different; and
- R₅ is C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, C₁-C₆alkylthio, halogeno-C₁-C₆alkylthio, C₁-C₆alkylsulfinyl, halogeno-C₁-C₆alkylsulfinyl, C₁-C₆alkylsulfonyl, halogeno-C₁-C₆alkylsulfonyl, C₁-C₆alkylsulfonyloxy, halogeno-C₁-C₆alkylsulfonyloxy, C₁-C₆alkoxy-C₁-C₆alkyl, halogeno-C₁-C₆alkoxy-C₁-C₆alkyl, C₁-C₆alkylthio-C₁-C₆alkyl, halogeno-C₁-C₆alkylthio-C₁-C₆alkyl, C₁-C₆alkylsulfinyl-C₁-C₆alkyl, halogeno-C₁-C₆alkylsulfinyl-C₁-C₆alkyl, C₁-C₆alkylsulfonyl-C₁-C₆alkyl, halogeno-C₁-C₆alkylsulfonyl-C₁-C₆alkyl, C₁-C₆alkylcarbonyl, halogeno-C₁-C₆alkylcarbonyl, C₁-C₆alkoxycarbonyl, halogeno-C₁-C₆alkoxycarbonyl, C₁-C₆alkylaminocarbonyl, C₁-C₄alkoxyiminomethyl, di(C₁-C₆alkyl)aminocarbonyl, where the alkyl groups can be identical or different; C₁-C₆alkylaminothiocarbonyl, di(C₁-C₆alkyl)aminothiocarbonyl, where the alkyl groups can be identical or different; C₁-C₆alkylamino, di(C₁-C₆alkyl)amino, where the alkyl groups can be identical or different; halogen, NO₂, CN, SF₅, thioamido, thiocyanatomethyl, trimethylsilyl; an unsubstituted or mono- to tetrasubstituted C₁-C₄alkylenedioxy group, where the substituents are chosen from the group consisting of C₁-C₄alkyl and halogen; aryl-Q-C₁-C₆alkyl, aryl-Q-C₂-C₆alkenyl, heterocyclyl-Q-C₁-C₆alkyl, heterocyclyl-Q-C₂-C₆alkenyl, or aryl-Q-C₁-C₆alkyl, aryl-Q-C₂-C₆alkenyl, heterocyclyl-Q-C₁-C₆alkyl or heterocyclyl-Q-C₂-C₆alkenyl which are mono- to pentasubstituted in the aryl or heterocyclyl ring, depending on the possibility of substitution, where the substituents independently of one another are chosen from the group consisting of halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, CN, nitro, OC(=O)-C₁-C₆alkyl, OH, NH₂ and C₁-C₆alkoxycarbonyl;

where, if q is greater than 1, the radicals R_5 can be identical or different;

Q is a direct bond, $-\text{CH}(\text{OH})-$, $-\text{C}(=\text{O})-$ or $-\text{S}(=\text{O})_v-$;

v is 0, 1 or 2;

R_{10} is H, $\text{C}_1\text{-C}_6\text{alkyl}$, $\text{C}_2\text{-C}_6\text{alkenyl}$, $\text{C}_2\text{-C}_6\text{alkynyl}$, $\text{C}_3\text{-C}_6\text{cycloalkyl}$; or $\text{C}_1\text{-C}_6\text{alkyl}$, $\text{C}_2\text{-C}_6\text{alkenyl}$, $\text{C}_2\text{-C}_6\text{alkynyl}$ or $\text{C}_3\text{-C}_6\text{cycloalkyl}$ -, which are mono- or polysubstituted by substituents from the group consisting of halogen; $-\text{Si}(\text{C}_1\text{-C}_4\text{alkyl})_3$, where the alkyl groups can be identical or different; $\text{C}_1\text{-C}_6\text{alkoxycarbonyl}$, or an aryl or heterocyclyl group which are unsubstituted or mono- or polysubstituted by substituents from the group consisting of halogen, $\text{C}_1\text{-C}_4\text{alkyl}$ and halogeno- $\text{C}_1\text{-C}_4\text{alkyl}$, and

p is 0, 1 or 2; and

(B) either

(I) n is 1 or 2 and q is 1, 2, 3 or, when n is 1, 4; and

A, G, X, Y, Z, R, R_2 , R_3 , R_4 , R_5 , R_7 and R_9 are as defined above under (A); or

(II) n is 0;

q is 2, 3, 4 or 5; and

A, X, Y, Z, R_2 , R_3 , R_4 , R_5 , R_7 and R_9 are as defined above under (A); and the radicals R_5 can be identical or different; with the proviso that if

q is 2, $(R_5)_2$ is not dichloro or dimethyl, and with the further proviso that R_2 is not CH_3

if AR_7 is CH_3 and $(R_5)_2$ is 3-fluoro, 5- CF_3 or, together, 3,4-methylenedioxy and R_3 and R_4 are H; or

(III) n is 0;

q is 1;

A, X, Y, Z, R_2 , R_3 , R_4 , R_7 and R_9 are as defined above under (A); and

R_6 is tert-butyl, $\text{C}_5\text{-C}_6\text{alkyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkyl}$, with the exception of CF_3 ;

$\text{C}_3\text{-C}_6\text{cycloalkyl}$, halogeno- $\text{C}_3\text{-C}_6\text{cycloalkyl}$, $\text{C}_5\text{-C}_6\text{alkoxy}$, halogeno- $\text{C}_3\text{-C}_6\text{alkoxy}$, $\text{C}_2\text{-C}_6\text{alkylthio}$, halogeno- $\text{C}_1\text{-C}_6\text{alkylthio}$, $\text{C}_1\text{-C}_6\text{alkylsulfinyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkylsulfinyl}$, $\text{C}_2\text{-C}_6\text{alkylsulfonyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkylsulfonyl}$, $\text{C}_1\text{-C}_6\text{alkylsulfonyloxy}$, halogeno- $\text{C}_1\text{-C}_6\text{alkylsulfonyloxy}$, $\text{C}_1\text{-C}_6\text{alkoxy-C}_1\text{-C}_6\text{alkyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkoxy-C}_1\text{-C}_6\text{alkyl}$, $\text{C}_1\text{-C}_6\text{alkylthio-C}_1\text{-C}_6\text{alkyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkylthio-C}_1\text{-C}_6\text{alkyl}$, $\text{C}_1\text{-C}_6\text{alkylsulfinyl-C}_1\text{-C}_6\text{alkyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkylsulfinyl-C}_1\text{-C}_6\text{alkyl}$, $\text{C}_1\text{-C}_6\text{alkylsulfonyl-C}_1\text{-C}_6\text{alkyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkylsulfonyl-C}_1\text{-C}_6\text{alkyl}$, $\text{C}_1\text{-C}_6\text{alkylcarbonyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkylcarbonyl}$, $\text{C}_2\text{-C}_6\text{alkoxycarbonyl}$, halogeno- $\text{C}_1\text{-C}_6\text{alkoxycarbonyl}$, $\text{C}_2\text{-C}_6\text{alkylaminocarbonyl}$, $\text{C}_1\text{-C}_6\text{alkoxyiminomethyl}$, $\text{di}(\text{C}_2\text{-C}_6\text{alkyl})\text{aminocarbonyl}$, where the alkyl groups can be identical or different; $\text{C}_1\text{-C}_6\text{alkylaminothio-carbonyl}$,

di(C₁-C₆alkyl)aminothiocarbonyl, where the alkyl groups can be identical or different; C₂-C₆alkylamino, di(C₂-C₆alkyl)amino, where the alkyl groups can be identical or different; SF₅, thiocyanatomethyl, trimethylsilyl, aryl-Q-C₁-C₆alkyl, aryl-Q-C₂-C₆alkenyl, heterocyclyl-Q-C₁-C₆alkyl, heterocyclyl-Q-C₂-C₆alkenyl; or aryl-Q-C₁-C₆alkyl, aryl-Q-C₂-C₆alkenyl, heterocyclyl-Q-C₁-C₆alkyl or heterocyclyl-Q-C₂-C₆alkenyl which are mono- to pentasubstituted in the aryl or heterocyclyl ring, depending on the possibility of substitution, where the substituents independently of one another are chosen from the group consisting of halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, CN, nitro and C₁-C₆alkoxycarbonyl;

Q is a direct bond, -CH(OH)-, -C(=O)- or -S(=O)_v-;

v is 0, 1 or 2; or

(IV) n is 1 and

q is 0;

A, X, Y, Z, R₂, R₃, R₄, R₇ and R₉ are as defined above under (A);

G is O; and

R is n-propyl, n-butyl, sec-butyl, isobutyl, C₃-C₆cycloalkyl, C₃-C₆cycloalkyl-C₁-C₄alkyl, halogeno-C₄-C₆cycloalkyl-C₁-C₄alkyl, C₁-C₄alkylenyl-C₃-C₆cycloalkyl, C₁-C₄alkylenyl-halogeno-C₃-C₆cycloalkyl, CH₂Si(C₁-C₄alkyl)₃, where the alkyl groups can be identical or different; a substituted aryl or benzyl, where the substituents of the aryl or benzyl independently of one another are chosen from the group consisting of C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, C₁-C₆alkylthio, halogeno-C₁-C₆alkylthio, phenoxy, CN and nitro; or a phenyl radical which is monosubstituted on two adjacent C atoms by an unsubstituted or mono- to tetrasubstituted C₁-C₄alkylenedioxy group, where the substituents are selected from the group consisting of C₁-C₄alkyl and halogen; with the proviso that OR is not n-propyloxy or -OCH₂Si(CH₃)₃ in the 4-position if X is CH, Y is OCH₃, Z is O, AR₇ is CH₃, R₂ is CH₃ and R₃ and R₄ are H; and with the further proviso that R is not phenyl which is substituted by fluorine or chlorine in the 4-position or benzyl which is substituted by methyl or methoxy in the 4-position or monosubstituted by fluorine, chlorine, bromine or CF₃ in the 2-, 3- or 4-position if OR is in the p-position, AR₇ is CH₃, R₂ is CH₃ and R₃ and R₄ are H; or

(V) n is 1;

- q is 0;
A, X, Y, Z, R, R₂, R₃, R₄, R₇ and R₉ are as defined above under (A); and
- G is S;
with the proviso that R is not methyl if R₂ is methyl; or
- (VI) n is 1;
- q is 0;
A, G, X, Y, Z, R₂, R₃, R₄ and R₉ are as defined above under (A);
- A is a direct bond, C₇-C₁₀alkylene, -C(=O)-, -C(=S)- or halogeno-C₁-C₁₀alkylene and R₇ is a radical R₁₀; or
- A is C₁-C₁₀alkylene, -C(=O)-, -C(=S)- or halogeno-C₁-C₁₀alkylene; and
- R₇ is CN, O(C₁-C₄alkyl)₂, or N(C₁-C₄alkyl)₂, in which the two alkyl radicals can be identical or different, OR₁₀, N(R₁₀)₂, where the radicals R₁₀ can be identical or different, or -S(=O)_pR₁₀;
- R₁₀ is H; or C₅-C₈alkenyl, C₄-C₈alkynyl, C₃-C₈cycloalkyl; or C₁-C₈alkyl, C₂-C₈alkenyl, C₂-C₈alkynyl or C₃-C₈cycloalkyl which are mono- or polysubstituted by substituents from the group consisting of halogen; -Si(C₁-C₄alkyl)₃, where the alkyl groups can be identical or different; C₁-C₈alkoxycarbonyl, or an aryl or heterocyclyl group which are unsubstituted or mono- or polysubstituted by substituents from the group consisting of halogen, C₁-C₄alkyl and halogeno-C₁-C₄alkyl; and
- R is methyl, ethyl, t-butyl, or mono- or polysubstituted methyl, ethyl or t-butyl, where the substituents independently of one another are chosen from the group consisting of halogen, C₁-C₈alkyl, halogeno-C₁-C₈alkyl, C₃-C₈cycloalkyl, halogeno-C₃-C₈cycloalkyl, C₁-C₈alkoxy, halogeno-C₁-C₈alkoxy, C₁-C₈alkylthio, halogeno-C₁-C₈alkylthio, phenoxy, CN and nitro; or a phenyl radical which is monosubstituted on two adjacent C atoms by an unsubstituted or mono- to tetrasubstituted C₁-C₄alkylenedioxy group, where the substituents are selected from the group consisting of C₁-C₄alkyl and halogen; or CH₂Si(C₁-C₄alkyl)₃, where the alkyl groups can be identical or different; or
- (VII) n is 1;
- q is 0;
A, G, X, Y, Z, R₂, R₃, R₄, R₇ and R₉ are as defined above under (A); and
- R is C₂-C₄alkenyl or C₂-C₄alkynyl which are substituted or unsubstituted, and where the substituents independently of one another are chosen from the group consisting of halogen, C₁-C₈alkyl, halogeno-C₁-C₈alkyl, C₃-C₈cycloalkyl, halogeno-C₃-C₈cycloalkyl, C₁-C₈alkoxy, halogeno-C₁-C₈alkoxy, C₁-C₈alkylthio, halogeno-C₁-C₈alkylthio, phenoxy,

CN and nitro, with the proviso that AR_7 is not methyl if R_2 is methyl, R_3 and R_4 are H and G is oxygen;

and, where appropriate, their possible E/Z isomers, E/Z isomer mixtures and/or tautomers, in each case in the free form or in salt form.

2. A compound according to claim 1 of the formula (I), in which X is CH.
3. A compound according to claim 1 of the formula (I), in which Y is OR_1 .
4. A compound according to claim 1 of the formula (I), in which Z is O.
5. A compound according to any one of claims 3 and 4 of the formula (I), in which R_1 is C_1 - C_2 alkyl.
6. A compound according to any one of claims 1 to 5 of the formula (I), in which R_2 is H, C_1 - C_4 alkyl, halogeno- C_1 - C_4 alkyl or C_3 - C_6 cycloalkyl.
7. A compound according to any one of claims 1 to 6 of the formula (I), in which R_3 and R_4 independently of one another are H, C_1 - C_4 alkyl, C_1 - C_4 alkoxy, OH, CN, NO_2 , halogen, halogeno- C_1 - C_4 alkyl or halogeno- C_1 - C_4 alkoxy.
8. A compound according to claim 1 of the formula (I), in which R_6 is H or C_1 - C_2 alkyl.
9. A compound according to claim 1 of the formula (I), in which R_6 is methyl or fluoromethyl.
10. A compound according to claim 1 or 7 of the formula (I), in which m is 0 or 2.
11. A compound according to claim 1 of the formula (I), in which n is 1 or 2.
12. A compound according to claim 1 of the formula (I), in which q is 1 or 2 and n is 1.
13. A compound according to claim 12 of the formula (I), in which $A-R_7$ is methyl or ethyl, R is C_3 - C_6 cycloalkyl- CH_2 - or halogeno- C_3 - C_6 cycloalkyl- CH_2 -, R_5 is C_1 - C_2 alkyl, C_1 - C_2 alkoxy or halogen and q is 1 and n is 1.
14. A compound according to claim 1 of the formula (I), in which AR_7 is methyl or ethyl, n is 1, q is 0, and

R is $\text{CH}_2\text{Si}(\text{CH}_3)_3$ or a substituted aryl or benzyl group, where the substituents are chosen from the group consisting of halogen, $\text{C}_1\text{-C}_4$ alkyl, halogeno- $\text{C}_1\text{-C}_4$ alkyl, $\text{C}_3\text{-C}_8$ cycloalkyl and halogeno- $\text{C}_3\text{-C}_8$ cycloalkyl.

15. A compound according to claim 1 of the formula (I), in which A-R_7 is CH_3 ,
 R_8 is halogen, $\text{C}_1\text{-C}_4$ alkyl, $\text{C}_1\text{-C}_4$ alkoxy, halogeno- $\text{C}_1\text{-C}_4$ alkyl, $\text{C}_3\text{-C}_8$ cycloalkyl or $\text{Si}(\text{CH}_3)_3$,
where the radicals R_8 are in each case identical or different;
q is 2 or 3 and n is 0.

16. A compound according to claim 1 of the formula (I), in which A-R_7 is CH_3 ;
R is n-propyl, n-butyl, sec-butyl, isobutyl, $\text{C}_3\text{-C}_8$ cycloalkyl, $\text{C}_1\text{-C}_2$ alkylenyl-halogeno- $\text{C}_3\text{-C}_8$ cycloalkyl or $\text{CH}_2\text{Si}(\text{CH}_3)_3$;
n is 1 and q is 0.

17. A compound according to claim 1 of the formula (I), in which
X is CH; Y is $\text{C}_1\text{-C}_2$ alkoxy; Z is O; A is a direct bond or methylene;
 R_2 and R_9 are methyl;
 R_3 and R_4 are H;
n is 1; q is 1 or 2;
 R_7 is a radical R_{10} ;
R is a substituted aryl group, where the substituents are chosen from the group consisting of halogen, methyl and halogenomethyl; and
 R_{10} is H, unsubstituted $\text{C}_1\text{-C}_4$ alkyl, cyclopropyl which is disubstituted by substituents from the group consisting of halogen, $\text{C}_2\text{-C}_3$ alkenyl which is disubstituted by substituents from the group consisting of halogen, unsubstituted $\text{C}_2\text{-C}_3$ alkynyl, $-\text{Si}(\text{CH}_3)_3$, $\text{C}_1\text{-C}_4$ alkoxycarbonyl, or a phenyl group which is monosubstituted by substituents from the group consisting of halogen, $\text{C}_1\text{-C}_2$ alkyl and halogeno- $\text{C}_1\text{-C}_4$ alkyl.

18. A compound according to claim 1 of the formula (I), in which
X is CH; Y is $\text{C}_1\text{-C}_2$ alkoxy; Z is O;
 R_2 and R_9 are methyl;
 R_3 and R_4 are H;
n is 0; q is 2;
 A-R_7 is CH_3 ; and
 R_5 is chlorine, fluorine, methyl or halogenomethyl, where the radicals R_5 are different.

19. A compound according to claim 1 of the formula (I), in which

Y is C₁-C₂alkoxy; Z is O;

R₂ and R₃ are methyl;

R₃ and R₄ are H;

n is 1; q is 1 or 2;

R is methylenedichlorocyclopropyl or a substituted phenyl or benzyl group, where the substituents are chosen from the group consisting of fluorine, chlorine, bromine, methyl and halogenomethyl; and

R₅ is fluorine or chlorine.

20. A compound according to claim 1 of the formula (I), in which

n is 0, q is 1,

Q is a direct bond and

R₅ is phenyl-ethyl, phenyl-ethenyl, heteroaryl-ethyl or heteroaryl-ethenyl, or phenylethyl, phenylethenyl, heteroarylethyl or heteroarylethenyl which are mono- to trisubstituted in the phenyl or heteroaryl ring, depending on the possibility of substitution, where the substituents independently of one another are chosen from the group consisting of fluorine, chlorine, bromine, C₁-C₂alkyl, halogenomethyl, methoxy, halogenomethoxy and C₁-C₂alkoxycarbonyl.

21. A compound according to any one of claims 1 to 10 of the formula (I), in which A-R₇ is CH₃,

R is methyl, ethyl, isopropyl or tert-butyl;

R₅ is C₁-C₄alkyl, C₁-C₄alkoxy, fluorine or chlorine;

q is 1; and n is 1.

22. A compound according to any one of claims 1 to 10 of the formula (I), in which A-R₇ is C₂H₅, n is 1 and q is 0.

23. A compound according to any one of claims 1 to 10 of the formula (I), in which A-R₇ is CH₃, n is 0 and q is 2.

24. A process for the preparation of a compound according to claim 1 of the formula (I) or, where appropriate, one of its E/Z isomers or tautomers, in each case in the free form or in salt form, which comprises, for example,

a1) either reacting a compound of the formula

WO 97/20809

PCT/EP96/05226

- 114 -

In which

X, Y, Z, R₃, R₄ and R₉ are as defined for formula (I) and

X₁ is a leaving group,

and in which the provisos mentioned in claim 1 for the compound of the formula (I) apply, preferably in the presence of a base, with a compound of the formula

In which n, q, A, G, R, R₂, R₅ and R₇ are as defined for formula (I),

and in which the provisos mentioned in claim 1 for the compound of the formula (I) apply, or a2) reacting a compound of the formula

in which n, q, R, A, G, R₂, R₅ and R₇ are as defined for formula (I),

and in which the provisos mentioned in claim 1 for the compound of the formula (I) apply, if appropriate in the presence of a base, with a compound of the formula

which is known or can be prepared by methods known per se, and in which

X, Y, Z, R₃, R₄ and R₅ are as defined for formula (I),

or

b) for the preparation of a compound of the formula (I) in which Y is NHR₆ and Z is O, reacting a compound of the formula (I) in which Y is OR₁ with a compound of the formula R₆NH₂, which is known or can be prepared by methods known per se and in which R₆ is as defined for formula (I), or

c) for the preparation of a compound of the formula (I) in which Y is NHR₆ and Z is S, reacting a compound of the formula (I) in which Y is R₆NH₂ and Z is O with P₄S₁₀ or Lawesson's reagent, or

d) for the preparation of a compound of the formula (I) in which Z is SO, reacting a compound of the formula (I) in which Z is S with an oxidizing agent, or

e) for the preparation of a compound of the formula (I) in which R₅ is aryl-Q-C₂-C₆alkyl, aryl-Q-C₂-C₆alkenyl, heterocyclyl-Q-C₂-C₆alkyl, heterocyclyl-Q-C₂-C₆alkenyl, or aryl-Q-C₂-C₆alkyl or aryl-Q-C₂-C₆alkenyl, heterocyclyl-Q-C₂-C₆alkyl or heterocyclyl-Q-C₂-C₆alkenyl which are mono- to pentasubstituted in the aryl or heterocyclyl ring, depending on the possibility of substitution, and where the substituents independently of one another are chosen from the group consisting of halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, CN, nitro and C₁-C₆alkoxycarbonyl, and

Q is a direct bond, -CH(OH)-, -C(=O)- or -S(=O)_v-; and

v is 0, 1 or 2; and

reacting a compound of the formula

in which

X, Y, Z, R₃, R₄, R₅, n, q, R, A, G, R₂ and R₇ are as defined for formula (I),

R_{6a} is aryl-Q-C₂-C₆alkynyl or heterocyclyl-Q-C₂-C₆alkynyl, or aryl-Q-C₂-C₆alkynyl or heterocyclyl-Q-C₂-C₆alkynyl which are mono- to pentasubstituted in the aryl or heterocyclyl ring, depending on the possibility of substitution, and where the substituents independently of one another are chosen from the group consisting of halogen, C₁-C₆alkyl, halogeno-C₁-C₆alkyl, C₃-C₆cycloalkyl, halogeno-C₃-C₆cycloalkyl, C₁-C₆alkoxy, halogeno-C₁-C₆alkoxy, CN, nitro and C₁-C₆alkoxycarbonyl;

Q is a direct bond, -CH(OH)-, -C(=O)- or -S(=O)_v-; and

v is 0, 1 or 2;

in which the provisos mentioned in claim 1 for the compound of the formula (I) apply;

and which is known or can be prepared by processes known per se, with hydrogen in the presence of a hydrogenation catalyst,

and in each case, if desired, converting a compound of the formula (I) obtainable according to the process or in another manner or an E/Z isomer or tautomer thereof, in each case in the free form or in salt form, into another compound of the formula (I) or an E/Z isomer or tautomer thereof, in each case in the free form or in salt form, separating a mixture of E/Z isomers obtainable according to the process and isolating the desired isomer, and/or converting a free compound of the formula (I) obtainable according to the process or in another manner or an E/Z isomer or tautomer thereof into a salt or converting a salt, obtainable according to the process or in another manner, of a compound of the formula (I) or of an E/Z isomer or tautomer thereof into the free compound of the formula (I) or an E/Z isomer or tautomer thereof or into another salt.

25. A compound of the formula

in which n, q, A, G, R, R₂, R₅ and R₇ are as defined for formula (I) in claim 1, and in which the provisos mentioned in claim 1 for the compounds of the formula (I) apply, or, where appropriate, a possible E/Z isomer, E/Z isomer mixture and/or tautomer thereof, in the free form or in salt form.

26. A process for the preparation of a compound as defined in claim 25 of the formula (III), in each case in the free form or in salt form, which comprises, for example,

f) reacting a compound of the formula (IV) in which n, q, A, G, R, R₂, R₅ and R₇ are as defined for formula (I) in claim 1 and in which the provisos mentioned in claim 1 for the compound of the formula (I) apply, if appropriate in the presence of a base, with H₂NOH or a salt thereof, or

g) reacting a compound of the formula

in which n, q, G, R, R₂ and R₅ are as defined for formula (I) in claim 1 and in which the provisos mentioned in claim 1 for the compound of the formula (I) apply, if appropriate in the presence of a base, with a compound of the formula

which is known or can be prepared by methods known per se and in which

A and R₇ are as defined for formula (I) in claim 1,

and in each case, if desired, converting a compound of the formula (III) obtainable according to the process or in another manner or an E/Z isomer or tautomer thereof, in each case in the free form or in salt form, into another compound of the formula (III) or an E/Z isomer or tautomer thereof, in each case in the free form or in salt form, separating a mixture of E/Z isomers obtainable according to the process and isolating the desired isomers, and/or converting a free compound of the formula (III) obtainable according to the

process or in another manner or an E/Z isomer or tautomer thereof into a salt, or converting a salt, obtainable according to the process or in another manner, of a compound of the formula (III) or of an E/Z isomer or tautomer thereof into the free compound of the formula (III) or an E/Z isomer or tautomer thereof or into another salt.

27. A pesticide, which comprises at least one compound according to claim 1 of the formula (I) or, where appropriate, an E/Z isomer or tautomer thereof, in the free form or in an agrochemically usable salt form, as the active compound in an effective action concentration and at least one auxiliary.

28. A process for the preparation of a composition as defined in claim 26, which comprises intimately mixing and/or grinding the active compound with the auxiliary or auxiliaries.

29. The use of a compound as defined in claim 1 of the formula (I) or, where appropriate, of an E/Z isomer or tautomer thereof, in the free form or in an agrochemically usable salt form, for the preparation of a composition according to claim 25.

30. The use of a compound as defined in claim 1 of the formula (I) or of a composition as defined in claim 27 for controlling pests.

31. A method of controlling pests, which comprises applying a compound as defined in claim 1 of the formula (I) or a composition as defined in claim 27 to the pests or their environment.

32. A process according to claim 31 for protecting plant propagation material, which comprises treating the propagation material or the site of planting out of the propagation material.

33. Plant propagation material treated by the process defined in claim 32.

34. A compound of the formula

In which n, q, R, A, G, R₂, R₅ and R₇ are as defined for formula (I), claim 1, and in which the provisos mentioned in Claim 1 for the compound of the formula (I) apply, or, where appro-

prate, a possible E/Z isomer, E/Z isomer mixture and/or tautomer thereof, in the free form or in salt form.

35. A compound of the formula

in which n, q, G, R, R₂ and R_q are as defined for formula (I), claim 1, and in which the provisos mentioned in claim 1 for the compound of the formula (I) apply, or, where appropriate, a possible E/Z isomer, E/Z isomer mixture and/or tautomer thereof, in the free form or in salt form.
