

**BOAT THAT IS PROVIDED WITH FLOATING TUBES IN A MULTI-LAYER
DESIGN**

ABSTRACT

A boat that is provided with floating tubes in a multi-layer design is
5 composed a plurality of floating tube devices which are installed
respectively at a left and a right side of a hull, and is provided with an air
bag, a buffer, and a surface layer unit. The buffer is provided with a
holding space and an assembling slot hole; whereas, the surface layer
unit is provided with a sealing element which is used to seal the
10 assembling slot hole, such that the floating tube devices are configured
as a multi-layer design to facilitate balance, anti-collision, and increase
of chance of survival.
