A B S T R A C T

The invention relates to a method and a device for printing disc-shaped registration carriers, whereby a print built up of several colours is provided on the registration carrier. Use is made of a printing cylinder, which is moved over a few printing plates, which have been moistened with various colours of ink, whereby said printing cylinder is subsequently rolled over the registration carrier. The device comprises a plurality of processing stations for registration carriers, as well as transport means by which the disc-shaped registration carriers can be moved from one processing station to the other processing station. One or more processing stations comprise a printing device disposed therein.
