(54) Title: A DEVICE FOR SEALING OF INSERTED CABLES, CONDUITS OR PIPES

(57) Abstract: In a device for sealing of conduits inserted in circular lead-throughs of walls and roofs designed as frame (1) it is provided for the arrangement of a plug formed sealing body (2) of elastic material which forms a quadrangular pack accommodation (7). In the pack accommodation (7) elastic splitted modules (4) in square form are inserted with received conduits (3) and arranged sealingly by means of clamping elements acting on the sealing body (2). To increase the pack accommodation (7) for an assembly and disassembly of the modules (4) it is so provided, that at least one boundary side of the pack accommodation (7) forms a free space (9) for receiving an insertable part element (8) after assembly of the modules (4). The part element (8) forms a part of the sealing body (2) and is designed as horizontal segment of a part of the depth of the sealing body (2).
