

ABSTRACT

COMBINATION MEDICINE FOR PREVENTING/TREATING DYSLIPIDEMIA OR CARDIOVASCULAR DISEASE

The present invention addresses the problem of providing a pharmaceutical composition/drug combination which makes it possible to prevent and/or treat dyslipidemia such as hypercholesterolemia and hypertriglyceridemia, or cardiovascular diseases such as arteriosclerosis and cardiovascular events. The present invention provides a combination of a peroxisome proliferator-activated receptor (PPAR) α agonist and an ATP citrate lyase (ACL) inhibitor for preventing and/or treating dyslipidemia such as hypercholesterolemia and hypertriglyceridemia, or cardiovascular diseases such as arteriosclerosis and cardiovascular events.
