

A B S T R A C T
ROOFING WASHER-DISPENSING AND
FASTENER-DRIVING MACHINE

5 A machine for dispensing stackable roofing washers of
small size (18) or large size (24) individually and for
driving fasteners (16) through such washers (18, 24)
includes a shuttle (50) actuatable to displace the lower-
most washer (18, 24) from a stack. A gate (100) is biased
10 towards a lowermost position wherein it provides sufficient
clearance for the lowermost washer (18, 24) but not any
overlying washer to pass beneath it. A pawl (110) mounted
pivotally to the gate (100) is biased to a lowermost
position wherein the pawl (110) engages a small washer (18,
15 Figure 18) displaced by the shuttle (50) so as to restrain
it against backward movement. A stop (120) is adjustable
so as to limit movement of a washer (18, 24) of whichever
size is being displaced. A measuring bar (160) is mounted
via the stop. A screw gun (60), provides a primary
20 handle, and a secondary handle (200) are mounted to an
upright element (62, 64) so as to be independently
adjustable.
