

"Baffle for the bottom cross-member of a door frame,
window frame or the like"

ALCAN FRANCE

This Sheet Has Been Replaced

ABSTRACT

Baffle capable of being mounted against a water drain hole (10) made in the outer face of the bottom cross-member (4) of a frame constituting the opening lining (1) of a door, window or other component, characterized in that it includes a flat support (12) suitable for being applied closely against this face in line with the hole, this support including means (23) for fixing to the cross-member and a flexible flap (17), preferably manufactured with the support, having dimensions greater than those of the hole, this flap being mounted so as to pivot on the support with respect to the cross-member so as to allow it to move outwards in relation to that face of the cross-member which includes the drain hole, leaving the latter clear so as to allow water contained in the cross-member to flow away freely to the outside, the bearing of the flap on the face of the cross-member preventing, on the other hand, any ingress of water into the cross-member from outside.
