

ABSTRACT

A fetching method, a fetching apparatus (S2), a bag opening apparatus (S1), and a fetching system are provided. The fetching method is configured to take out an accommodating box (A2) in a protective bag (A1). The protective
5 bag (A1) has an accommodating space (A11) and an opening (A12), the accommodating box (A2) is disposed in the accommodating space (A11) through the opening (A12), the protective bag (A1) is configured to have a packaging portion (A13) and a non-packaging portion (A14), the packaging portion (A13) covers an outer periphery of the accommodating box (A2), the
10 non-packaging portion (A14) is folded into a tail structure (A15), a tape (A3) is adhered to the packaging portion (A13) and the tail structure (A15), and the tape (A3) is configured to fix the tail structure (A15) to the packaging portion (A13). The fetching method includes a positioning step, a cutting step, a stretching step, and a taking out step.
