(54) **Title**: A METHOD FOR FINE TUNING A HEARING AID

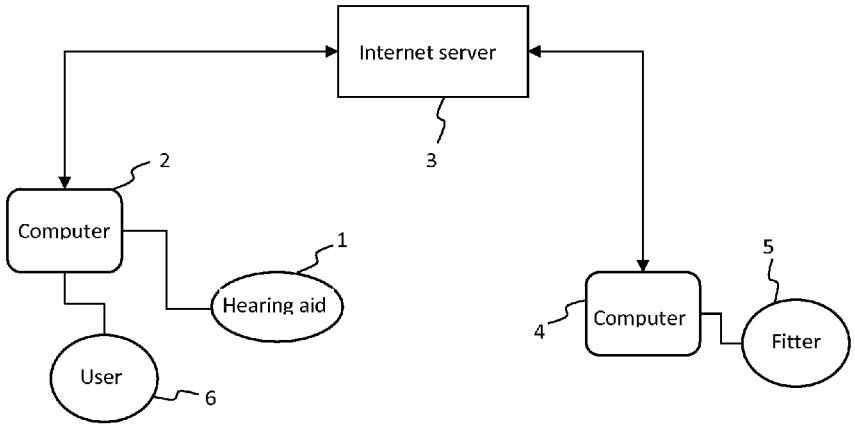

Fig. 1

(57) **Abstract**: A method for fitting a hearing aid (1), comprising the steps of recording the audiogram of the hearing aid user (6), selecting a fitting setting, using the hearing aid (1) for a period of time, logging data representing information on the sound environment in which the hearing aid is being used. The method comprises the steps of providing a computer based questionnaire on a first computer (2), said questionnaire comprising questions directed to the hearing aid users subjective experience with using the hearing aid, thereafter uploading questionnaire data representing the filled out questionnaire to an internet server (3), downloading said questionnaire data from said internet server to a second computer (4), transferring said logged data to said second computer, correlating said downloaded questionnaire data with said logged data, and selecting a new hearing aid setting, implementing the new hearing aid setting into the hearing aid.
