

ABSTRACT

The present disclosure provides an urban forest garden building and a building group.

Each odd-numbered floor includes a first apartment and a second apartment. A first

hanging greenery platform of each odd-numbered floor corresponding to the first

5 apartment is arranged in a first direction, and a second hanging greenery platform of

each odd-numbered floor corresponding to the second apartment is arranged in a

second direction. Each even-numbered floor includes a third apartment and a fourth

apartment. A first hanging greenery platform of each even-numbered floor

corresponding to the third apartment is arranged in a third direction, and a second

10 hanging greenery platform of each even-numbered floor corresponding to the fourth

apartment is arranged in a fourth direction. A high window or a laterally-opened

window is arranged at an external wall of an upper floor located immediately above a

current floor with the hanging greenery platform and the hanging greenery platform.
