(54) Title: OPHTHALMIC LENS FOR MYOPIA CONTROL

FIG. 10

(57) Abstract: An ophthalmic lens and system for designing a lens. The lens includes a lens center, and a shape defined by a lens outer peripheral edge. An optic zone surrounds the lens center and has an optic zone outer periphery with an optical power selected to correct a myopic condition of a user. The lens has a toric power at the lens center that is less than a toric power at the optic zone outer periphery, and has a variable toric power that increases radially across at least a portion of the lens to at least the optic zone outer periphery. The variable toric power has a predetermined power profile that induces positive field-of-view averaged blur anisotropy for the user at or in front of a retinal plane of the user.
