(54) Title: REUSABLE BREACHING TRAINING DOOR

Fig. 1A

(57) Abstract: Presented herein is a training apparatus designed for training first responders, law enforcement and military personnel in the use of breaching tools. The training apparatus comprises: a door and a door frame. The door frame comprises an additional upright profile that functions as the door jamb located between a lock side upright of the door frame and a lock side rail of the door. The door jamb is supported by the door frame but not fixed directly to it at either the top or the bottom of the door jamb, thereby allowing the door jamb to move away from a lock side rail of the door during a breaching exercise. Also described herein are several add-on training assemblies that provide different realistic training scenarios.
