Claims

1. A real-time interactive collaboration system for aroma creation between users located in remote locations, comprising:

aroma blending devices in different locations adapted to deliver at least one aroma substance to the nasal cavities of an individual to allow users located in remote locations to experience the same aroma profile during an aroma creation session;

a rack including a plurality of aroma substance containing cartridges inserted into each aroma blending device, wherein the rack includes a communication means for data communication between the aroma substance containing cartridges and the aroma blending device; and

web enabled devices in different locations networked together through the Internet that store a computer application for blending of the aroma substances by the aroma blending devices and for recording an aroma creation session in real-time; and

a cloud server that stores information related to the aroma creation session;

wherein the web enabled devices are in communication with the cloud server and the aroma blending devices, and

wherein the system enables users to share, collaborate and interact in real-time during the aroma creation session.

2. The system according to claim 1, wherein the aroma blending devices include~~s~~ a display.

3. The system according to claim 2, wherein the display is a touch screen.

4. The system according to claim 1, wherein the web enabled devices include~~s~~ a microphone.

5. The system according to claim 1, wherein the communication means includes a short range communication reader.

6. The system according to claim 5, wherein the communication means includes a near field communication (NFC) interface.

7. The system according to claim 1, wherein the information on the cloud server includes aroma substance information for each cartridge.

8. The system according to claim 7, wherein the aroma substance information is selected from the group consisting of security code, ingredient information, date and time stamp, expiry date, air flow through cartridges and duration of usage for cartridges.

9. The system according to claim 1, wherein the rack including the plurality of aroma substance containing cartridges includes at least 10 cartridges.

10. The system according to claim 1, wherein the rack including the plurality of aroma substance containing cartridges includes at least 15 cartridges.
