

NON-AQUEOUS ELECTROLYTIC SOLUTION FOR CAPACITOR AND
CAPACITOR CONTAINING NON-AQUEOUS ELECTROLYTIC SOLUTION

ABSTRACT

Non-aqueous electrolytic solutions for capacitors which
5 release a little gas, have excellent potential window of
electrochemical stability and enable capacitors to show
excellent charging/discharging cycle properties and safety
performance, and capacitors containing such non-aqueous
electrolytic solutions.

10 The non-aqueous electrolytic solution for capacitors
comprises an electrolytic solution containing at least one
cyclic carbonic ester selected from specified compounds and an
electrolyte.
