

DEVICE MANAGEMENT SYSTEM

ABSTRACT

5 A device management system (1) includes a storage unit (41) and a processing unit
(43). The storage unit (41) stores data of a device (11, 12) as a device data model having a
hierarchical structure. The device data model is a data model in which at least one of
information relating to a component of the device (11, 12), information relating to a function
of the device (11, 12), and information relating to a specification of the device (11, 12) is
10 associated with the device (11, 12). In response to a processing request from an external
program, the processing unit (43) reads or rewrites the data stored as the device data model in
the storage unit (41).
