

ABSTRACT

QUICK LIFT ASSEMBLING STORAGE BOX

A quick lift assembling storage box includes a folding box in a flat half-folded state, and a traction support board disposed at the top of the folding box. After a user lifts the traction support board to drive and change the folding box in the flat half-folded state into a three-dimensional state with an accommodation space, and then the user can press and superimpose the traction support board onto the bottom and the inner sides of the folding box to reinforce the strength of the folding box.
