(54) Title: LIGHT ASSEMBLY OF PRE-DEFINED SHAPE

(57) Abstract: A light assembly having a pre-defined shape is provided to be removably attached to a mating guide provided on any convenient device' but advantageously provided on a weapon. The light assembly comprises a housing provided with suitable optics having a light source at one end thereof and batteries for powering the light source through a switch. The housing has a pair of lateral members which are movable between a retracted position and an extended position so that, when the members are in the retracted position, the light assembly has the above-mentioned pre-defined shape and when the members are in the extended position, they are adapted to engage the mating guide. Means for preventing the longitudinal movement of the light assembly on the mating guide are also provided with the light assembly. In a particularly advantageous application, the light

assembly can thus be easily mounted and used as a target illumination and/or aiming device with a weapon or be readily used as a separate and independent entity.
