(54) Title: WRIST REST ASSEMBLY

(57) Abstract

A wrist assembly (10) has a base and a layer of a resilient gel supported above the base. The wrist rest assembly is for use adjacent a device operated by a person's hands or fingers, such as a computer keyboard (20), lap-top or portable computer, computer mouse or other input device. A layer of resilient nonwoven material (42) is disposed between the base and at least a portion of the layer of gel (52) to define, in combination with the layer of gel, a resilient wrist rest support structure supported from the base. A flexible liquid-impervious layer (50) is disposed between the layer of resilient gel and the layer of resilient nonwoven web material.
