(54) Title: TRANSMISSION MANAGEMENT SYSTEM, TRANSMISSION SYSTEM, TRANSMISSION MANAGEMENT METHOD, TRANSMISSION MANAGEMENT PROGRAM, COMPUTER READABLE INFORMATION RECORDING MEDIUM, PROGRAM PROVIDING SYSTEM, AND MAINTENANCE SYSTEM

(57) Abstract: A transmission management system manages, for items of transmission terminal identification information for identifying transmission terminals, respectively, relay apparatus identification information for identifying relay apparatuses capable of relaying content data transmitted from each of transmission terminals; receives, from the transmission terminal acting as a request source, items of the terminal identification information for identifying the transmission terminal acting as the request source and the transmission terminal acting as a destination, respectively; searches the relay apparatus identification information based on the received items of the terminal identification information for identifying the transmission terminals acting as the request source and the destination, respectively, and extracts items of the relay apparatus identification information each being common to the items of the transmission terminal acting as the request source and the destination, respectively.
