WHAT IS CLAIMED IS:

1. A turntable cloth peeling jig comprising:

a cloth clamping member configured to clamp an outer peripheral edge of a cloth;

a handle configured to pull the cloth clamping member,

wherein the cloth clamping member includes an upper member and a lower member that clamp the outer peripheral edge of the cloth from an upper side and a lower side thereof,

the upper and lower members include mutually engageable teeth provided on mutually facing surfaces thereof, and

the teeth are provided over 5 cm or more in a longitudinal direction of the upper and lower members; and

an extension bar configured to connect the cloth clamping member and the handle,

wherein one end of the extension bar is rotatably attached to a longitudinal end portion of the cloth clamping member, and another end of the extension bar is rotatably attached to a longitudinal end portion of the handle.

2. The turntable cloth peeling jig of claim 1, wherein one of the upper and lower members includes a pin for breaking through the cloth when the outer peripheral edge of the cloth is clamped, and a remaining one the upper and lower members includes a pin insertion hole into which the pin is inserted.

3. The turntable cloth peeling jig of claim 1, wherein at least a part of each of the upper member and the lower member is covered with a cover made of a soft member.

4. The turntable cloth peeling jig of claim 1, wherein the handle has a U-shape and is directly fixed to the cloth clamping member.
