(54) Title: APPARATUS FOR ENHANCING PERFORMANCE OF FUEL COMBUSTION

Figure 9

(57) Abstract: This invention demonstrate the apparatus for enhancing the performance of fuel combustion having tubes comprised of woven filaments in the form of a net made of metal or non-metal materials having the property of reducing static charges between molecules. The invention as disclosed herein will allow the better distribution of gas mass. The spaces between molecules of gas mass can enhance its flammable property and allow complete combustion. With the same amount of gas used, the heat and energy obtained will also increase.
