

Floor-Type Air Conditioner

Abstract

- 5 A floor-type air conditioner capable of realizing airflow according to user's preference. The floor-type air conditioner (1) has a casing (4), a first vertical flap (51), a second vertical flap (71), and a control section. In the casing (4), there are provided a first blowout opening (12) and a second blowout opening (13) that are arranged, in a front view, in the lateral direction (D1) and from
- 10 which conditioned air is blown out. The first vertical flap (51) adjusts the direction of airflow blown out from the first blowout opening (12). The second vertical flap (71) adjusts the direction of airflow blown out from the second blowout opening (13). The control section is capable of individually adjusting the first vertical flap (51) and the second vertical flap (71).
