

**DISPLAY APPARATUS, DRIVING METHOD FOR DISPLAY APPARATUS
AND ELECTRONIC APPARATUS**

ABSTRACT OF THE DISCLOSURE

A plurality of scanning periods are combined to form a composite period (2H). Within the first period of the front half, threshold value (V_{th}) correction is carried out all at once, and within the second period of the latter half, signal (V_{sig}) writing operation is carried out. High speed writing can be carried out even where the scanning period is shortened.
