

FAN BLADE-HOISTING DEVICE FOR CEILING FAN

ABSTRACT OF THE DISCLOSURE

A fan blade-hoisting device for ceiling fan comprises a fixed
5 bracket and a revolving unit. Wherein the fixed bracket is fixed to the
rotary assembly of the ceiling fan, the revolving unit is connected to the
fixed bracket, which is revolvable relative to the fixed bracket, the
revolving unit is combined with the fan blade. By such arrangements, the
respective fan blade will be drop down in case of stoppage of the ceiling
10 fan, such that enables the user to clean the fan blades easily without
damaged caused, while the fan blades will be raised up so as to blow the
air in case of the rotation of the ceiling fan.
