(54) Title: QUEUE MANAGEMENT SYSTEM AND METHOD

(57) Abstract: A queue management system in accordance with present embodiments may include a data server system including a processor and memory. The queue management system may include an interface system of the data server system configured to receive a reservation request including an indication of a general time period of arrival of a guest to an area. Additionally, the queue management system may include a reservation right allotment system of the data server system configured to correlate a reservation slot for accessing an attraction to identification information for the guest. Further, the queue management system may include a detection system of the data server system configured to determine when a portable identification feature associated with the identification information has arrived to the area, and a reservation assignment system of the data server system configured to establish a reservation to access the attraction at a specific time window.

FIG. 1

**Declarations under Rule 4.17:**

- *as to applicant's entitlement to apply for and be granted a patent (Rule 4.17(ii))*
- *as to the applicant's entitlement to claim the priority of the earlier application (Rule 4.17(iii))*

Published:

- *without international search report and to be republished upon receipt of that report (Rule 48.2(g))*
