

ABSTRACT

Provided is a socket cleaning device (100) suitable for cleaning a socket (3). The socket cleaning device (100) includes: a substrate (1) and an abrasive block (2). The abrasive block (2) covers one side of the substrate (1). The abrasive block (2) has a central portion (21) overlapping the substrate (1) and a plurality of feet (22) extending from edges of the central portion (21) and not overlapping the substrate (1). Each of the feet (22) is formed with a pressing region (221) at a side facing the substrate (1) and an abrasive region (222) at a side away from the substrate (1).
