

ABSTRACT**Strapontin with ischial support and associated vehicle**

The invention relates to folding seat (10) for a vehicle comprising a backrest (12) and a seat base (14), the backrest (12) being suitable for being fastened to the vehicle, the seat base (14) being movable with respect to the backrest (12) between a folded-out position and a folded-in position. The seat base (14) extends against the backrest (12) in the folded-in position, the seat base (14) comprising a seating surface (18) and a support surface (20) opposite the seating surface (18), the seating surface (18) forming a seat with the backrest (12) in the folded-out position of the seat base (14). The seat base (14) has a shape such that, in the folded-in position, the support surface (20) extends in the continuity of the backrest (12) and forms an ischial support (26) with the backrest (12). The invention further relates to an associated vehicle.
