(54) Title: CRUSHING BAGS AND METHODS FOR USE AND MANUFACTURE

FIG. 1

(57) Abstract: A pill crusher pouch is constructed of a flexible sheet material having an open top and an open bottom, wherein the open bottom is dimensionally smaller than the open top, forming a funnel-like internal pouch cavity, and a crease near the bottom of the pouch that allows a user to easily fold the pouch to form a temporary seal that prevents crushed pill product from dispensing through the open bottom until the user unfolds the pouch.
