

Electrically powered cycles and automatic storage system for
such cycles.

ABSTRACT

Electrically powered cycle comprising a detachable battery (9) mounted by sliding on two rails (28) of a battery receptacle (27) located on the central portion (17) of the handlebar. The rails (28) are inclined downward and rearward and the battery is inserted into the receptacle by sliding the battery from the upper front end (30) of the rails. The battery is facing the user and visible to the user. The rails also serve to connect the battery electrically.
