

LIGHT EMITTING GLASS STRUCTURE

5 **Abstract**

Disclosed herein is a light emitting glass structure comprising a first substrate, a first electrode layer formed over the first substrate, a interpose layer formed over the first electrode, and a second electrode layer formed on a second substrate for interposing the first substrate and the second substrate. The interpose layer comprises a light emitting material
10 and a dielectric layer formed along the light emitting material, the first electrode layer and the second electrode layer for providing electrical connection for the light emitting glass structure.
