[Summary of Invention]

[Technical Problem]

[0005]

The present disclosure seeks to provide a real-time monitoring of the package of shuffled game cards in casinos and enable the casino to stop a game immediately when something unexpected happens by administrating the whole package of shuffled game cards in casinos. This administrating is important because he or she may know the sequence of the shuffled playing cards on the table once it had been lost in the casino.

[0006]

The present disclosure also seeks to provide a package of shuffled game cards monitoring system with which it is possible to allow a casino to stop any suspicious package of shuffled game cards in the casino, by administrating the whole package of shuffled game cards in casinos.

When operating people in casinos distribute the packages of playing cards to game tables for plays, any loss of package or an exchange of packages should not occur. For example, if some of cards or whole package of cards in which the sequence of these cards are preliminary read or exchanged by someone during a delivery of packages to a game table, he or she may win the games at the table to which the exchanged or read package delivered.

[Solution to Problem]

[0007]

An aspect of the present invention provides a system for managing a plurality of gaming equipments used at a gaming table, each of the gaming equipments has an ID code being unique to each of the gaming equipments, the system comprising: a storage, the storage is configured to contain the gaming equipments at/near the gaming table; and an ID code reader, the ID code reader is configured to read the ID codes from the gaming equipments contained in the storage; and a controller, the controller is configured to obtain stock information which represents a result of reading of ID codes of the gaming equipments contained in the storage by the ID code reader, wherein the controller is configured to obtain expected increases or decreases of the gaming equipments, and identity whether the result of reading by the ID code reader has been changed with the expected increases or decreases to check whether the gaming equipments moves correctly from/to the storage.

[0007a]

Another aspect of the present invention provides a method for managing a plurality of gaming equipments used at a gaming table, each of the gaming equipments has an ID code being unique to each of the gaming equipments, the method comprising: a step of reading the ID codes from the gaming equipments contained in a storage; a step of obtaining stock information which represents a result of reading of ID codes of the gaming equipments contained in the storage based on the ID codes obtained by the reading; a step of obtaining expected increases or decreases of the gaming equipments, and identity whether the result of reading by the ID code reader has been changed with the expected increases or decreases; and a step of identitying whether the result of reading by the ID code reader has been changed with the expected increases or decreases, thereby checking whether the gaming equipments moves correctly from/to the storage.

[0007b]

There is also disclosed a system for administrating a package of shuffled playing cards, wherein

a predetermined number of decks of game cards are shuffled in a random order and individually packaged as one package, an unique ID code is attached to the package of each unique shuffled game cards

the system having

one or more ID code reader(s) for reading all of ID codes of the packages which have been brought into a pit for a game table,

an administrating controller for monitoring each ID code of all existing packages of shuffled game cards at the pit with obtaining each ID codes of all existing packages of shuffled game cards at the pit by the ID code reader(s),

the ID code reader(s) is also disposed at the game table for reading the ID code of the packages at the game table to identify the package which will be the next use for a card dealing shoe,

wherein,

the ID codes of the packages for the next use is examined whether it is the one properly arrived on the game table or the one arrived at proper timing or period of time by the administrating controller.

[0008]

There is also disclosed a method for administrating a package of shuffled playing cards,

wherein

a predetermined number of decks of game cards are shuffled in a random order and individually packaged as one package, an unique ID code is attached to the package of each unique shuffled game cards

and

the packages of shuffled game cards are carried from a backyard to pits for game tables and game tables,

the method having,

a registering step for registering all of ID codes of the packages which have been brought into a back yard in a data base,

an administrating step for reading all of the ID codes of packages which have been brought into a pit and monitoring each ID code of all existing packages of shuffled game cards at the pit by obtaining each ID codes of all existing packages of shuffled game cards at the pit by ID code reader(s),

wherein,

in the administrating step at the pit all of ID codes of the packages is examined whether it is the one preliminarily brought into the back yard and having been registered in the data base or not.

[0009]

The method for administrating a package of shuffled game cards according to the present disclosure, the registered ID codes of the packages in the data base may be deleted or acknowledged as after having used when the ID code of the package is read by an ID code reader at the game table. The ID codes of the packages read for the next use may be examined by the administrating controller whether it is the one properly arrived on the game table or the one arrived at proper timing or period of time that may be properly arrived on the game table or the one arrived at proper timing or period of time by judging at least one of the followings;

1) whether it was carried through predetermined delivery rout,

2) whether it was missing one,

3) whether it has not been registered,

4) whether it has been unused in the pit more than predetermined period,

5) whether it was carried from unexpected pit or without passing any pit,

6) whether it had been used at any of game tables in the past.

[0010]

The method for administrating a package of shuffled game cards according to the present disclosure, the administrating step further may have a step for administrating whether or not all of registered ID codes of the packages in the data base have been deleted or acknowledged as after having used during certain period of time. A pallet ID or a carton ID may be used for registering ID codes of the packages which have been brought into the back yard. The administrating step further may have a step for administrating whether or not there is any package which has not been used at the game tables during certain period of time.

[0011]

A keeping box for containing plurality of packages of shuffled game cards for the method for administrating a package of shuffled game cards according to the present disclosure may have reader(s) for reading the ID codes of packages of shuffled game cards in the keeping box, a communication means for sending information obtained by the reader to outside the keeping box and a lock means to prevent taking off the package from the keeping box.

[Brief Description of Drawings]

[0014]

[Figure 1] Fig. 1 is a perspective view of a package and an unpackaged shuffled playing cards to be used in a card dealing shoe of the system for administrating a package of shuffled playing cards according to the embodiment of the present invention.

[Figure 2] Fig. 2 is a diagram schematically showing the entirety of a system for administrating a package of shuffled playing cards according to an embodiment of the present invention.
