(54) Title: MACHINE AND METHOD FOR RUNNING A MACHINE

Fig. 1

(57) Abstract: A machine and a method for drilling a hole or setting a screw, wherein the machine comprises a motor having a shaft, and a controller provided for providing electric current to the motor to rotationally drive the shaft, continuously determining a set of parameters characterizing a drilling and/or setting process, recognizing a parameter condition of each parameter of the set of parameters as constant if a change of the parameter over time is below a threshold, recognizing a parameter condition of each parameter of the set of parameters as changing if a change of the parameter over time is above the threshold, continuously determining a number of parameters the parameter condition of which is changing, and stopping the motor if the number is at least a predefined minimum number for a predetermined time interval.
