

FINANCIAL INFORMATION OUTPUT APPARATUS, FINANCIAL
INFORMATION OUTPUT METHOD, AND FINANCIAL INFORMATION OUTPUT
PROGRAM OUTPUTTING FINANCIAL INFORMATION IN PRESCRIBED
FORMAT

5

ABSTRACT

[Object] To provide a financial information output apparatus
that can quickly output even a valuation report including
complicated financial information as a report in a general-
10 purpose format.

[Solving Means] Including a communication unit 1 that
acquires precondition data showing preconditions for
creating a valuation report corresponding to a target company,
acquires financial statement data showing contents of
15 financial statements of the target company described above,
and receives selections of comparable companies and
financial parameters that should be reflected in the
valuation report, and a processing unit 2 that uses
precondition data and financial statement data to calculate
20 numerical values for the valuation report based on the
selected financial parameters and information of the
selected comparable companies and convert the calculation
results into report data in a general-purpose format, and
causing the converted report data to be output at a user
25 terminal T as the valuation report.
