

**ABSTRACT****Data communication method between a plurality of aircraft**

The invention relates to a data communication method between a plurality of aircraft (12) from a set (10) of aircraft (12), the aircraft (12) being organized according to a plurality of telecommunications, notably radio telecommunication networks (14), connected to each other through relay stations, each telecommunication network (14) being provided with an identifier specific to the network (14), the method comprising a step for adding pieces of information in the data to be emitted from an aircraft (12) belonging to a first network (14) of aircraft (12), the pieces of information comprising the identifier specific to the first network (14).
