(54) Title: LOCKABLE SNAP-CLIP FASTENER

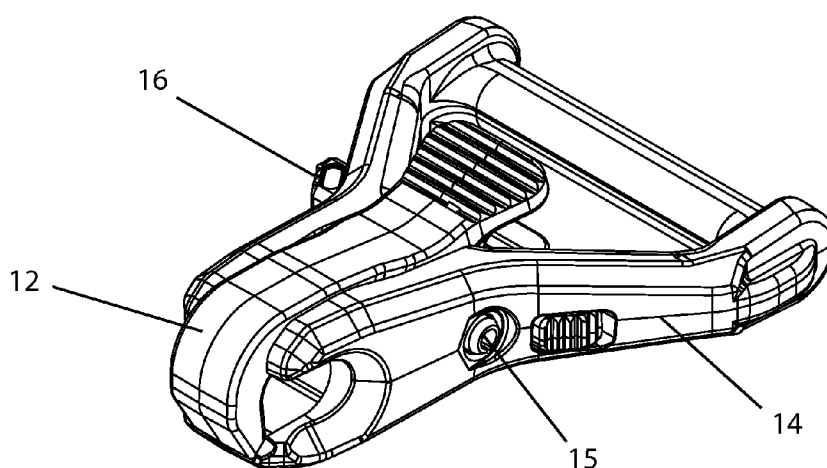

FIG. 1

(57) Abstract: The present invention is a lockable snap-clip fastener (10) with two spring-biased jaw members (12, 14) and a slidable locking bar (16). The same spring (13) that biases the jaws (12, 14) holds the locking bar (16) in position. Since the bar (16) is held in either the locked or unlocked position, it is more secure and must be positively actuated in order to transition from one configuration to the other.
