

**SPRING BEAM FOR HARD DISC DRIVES AND METHOD OF MAKING SPRING
BEAM FOR HARD DISC DRIVES**

Abstract

5

An elongate spring beam 30 has two generally flat and elongate beam members: a first beam member 25 and a second beam member 27 opposing the first beam member. A support member 29 extends between opposing faces of said first and second beam members and across the spring beam. First ends of the two beam
10 members are mounted to a first mounting block 31.
