

ABSTRACT

WOOD LOADING VOLUME ESTIMATION

- 5 The present invention provides a method for determining volume of one or more wood stacks, the method comprises capturing (110) one or more images of the wood stacks; processing (120) the one or more images to obtain a mean width, a mean height, and a conversion factor of each wood stack; and determining (150) the volume of each wood stack applying the mean width, the mean height, the conversion factor, and one or more
- 10 user predefined dimension values of each wood stacks to a predetermined formula;
