(54) Title: INFORMATION ACCESS HANDOVER

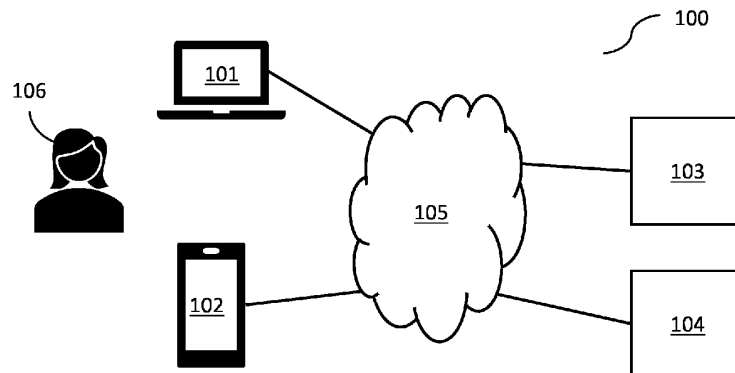

Fig. 1

(57) Abstract: A computerized method of information access handover between a first device and a second device of a user is presented. The method comprises displaying, on the first device, a QR code generated by a synchronizer. The method further comprises capturing the QR code with the second device for displaying the data record and providing a registration option for associating the data record with the user at a relying party. The method further comprises performing a web authentication registration and, in response to that the web authentication registration flow has been performed successfully, performing an information access handover and securing process. The information access handover and securing process comprises sharing, by the second device, the unique user identifier and the device identifier with the first device, storing them at the first device, and securing access to the data record. A corresponding system and computer program are provided, too.
