(54) Title: SYSTEM AND METHOD FOR REPETITION OF SCHEDULING INFORMATION ON A CONTROL CHANNEL

FIG. 13

(57) Abstract: A first apparatus may determine a first schedule associated with the one or more repetitions of the control information on the control channel based on the first information. The first apparatus may receive, from the network, at least one of the one or more repetitions of the control information on the control channel based on the first schedule, wherein the control information indicates a second schedule associated with a random access response (RAR) on a data channel. The first apparatus may receive, from the network, the RAR on the data channel based on the second schedule.
