

ABSTRACT**5 FLOWLINE CONNECTOR WITH SUBSEA EQUIPMENT PACKAGE**

The connector comprises a first portion 12 for mounting on a first piece of subsea equipment, such as a wellhead 14. A second portion 10 of the connector is attached to the end of a flowline 26. Each portion includes a respective guide 20, 24,
10 interengageable by lowering the second connector portion, on the end of the flowline 26, into the first. The guides 20, 24 may allow relative pivoting of the connector portions 10, 12 to bring them into axial alignment for make-up of a fluid tight connection therebetween. The second connector portion comprises a subsea equipment package 30, 32 (e.g. chokes, gas/water separators, gas liquifiers, pumps and the like) for connection to
15 the first piece of equipment 14.
