CLAIMS

1. A fruit juice beverage packed in a package, comprising two beverage compositions that differ in the compositional profile of components and are each packed separately in two beverage storage segments,

wherein at least one of the beverage compositions has a pH of 3.5 or more, wherein each beverage storage segment has a volume of at most 100 mL, wherein the beverage is a concentrated-type beverage that is drunk after the two beverage compositions packed in the beverage storage segments are mixed together and diluted, wherein the concentration of citral in a beverage composition packed in one beverage storage segment is higher than that in a different beverage composition packed in a different beverage storage segment.

2. The beverage according to claim 1, wherein the beverage composition with a high citral concentration has a pH of 3.5 or more.

3. The beverage according to any of claims 1 to 2, wherein the concentration of citral in a composition into which the beverage compositions packed in the two beverage storage segments are mixed together after they are each separately sterilized is higher than that in a composition that is sterilized after the beverage compositions are mixed together.

4. The beverage according to any of claims 1 to 3, wherein at least one of the beverage compositions contains an alcohol.

5. The beverage according to claims 1 to 3, wherein the beverage is not an alcoholic beverage.

6. The beverage according to any of claims 1 to 5, which is diluted with a diluting

liquid by a dilution factor of 2.0 to 20.0-fold.

7. The beverage according to any of claims 1 to 6, wherein the package is a resin package and each beverage storage segment has a volume of at most 60 mL.

8. A method for producing the beverage according to any of claims 1 to 7, the method comprising a step of packing two beverage compositions that differ in compositional profile separately in two beverage storage segments.
