

Abstract

Provided is a coffee beverage having suppressed coarseness and having good sharpness of bitterness and good retronasal aroma. The coffee beverage of the present invention includes the following components (A) and (B): (A) acetylmethylpyrrole at a content of less than 0.1 ppm by mass; and (B) a dicaffeoylquinic acid, in which a mass ratio of the component (A) to the component (B), $\{(A)/(B)\}$, is 0.00055 or less.
