

WASHING MACHINE

ABSTRACT

A washing machine according to the present disclosure comprises: a
5 casing; a top cover disposed on the top of the casing; a slot in the top cover; a lid
disposed to cover the top of the slot in an openable and closable manner; and a
bearing configured to rotatably support the lid. The top cover includes a top
face having a space into which the bearing is to be inserted. The bottom face of
the bearing includes: a first face at a side of the bearing, the side being to be
10 inserted into the space; and a second face at a higher position than the first face.
Each of the first face and the second face is fixed to the top cover with a screw.
