INFORMATION PROVIDING DEVICE

ABSTRACT

An information providing device includes a first information generating section configured to generate a first image representing a layout of seats of a plurality of operators at a first magnification, the first image being an image in which a schematic task status of each of the plurality of operators is represented by a first object group, and each of the seats is configured with the first object group; a second information generating section configured to generate a second image representing the layout at a second magnification greater than the first magnification, the second image being an image in which a detailed task status of each of the plurality of operators is represented by a second object group, and each of the seats is configured with the second object group; and a display section configured to display the first image and the second image.
