

ABSTRACT

This terminal device is provided with: an acquisition unit which receives, from a server, information displayed on a display device used for medical treatment or care, and stores the received information in a storage unit; and a display control unit which displays the information on the display device. When a display stop condition, which indicates the likelihood that there is a difference between information stored in the server and information stored in the storage unit, is satisfied, the display control unit stops the display of at least information about biological information on a facility user who is a person requiring the medical treatment or care, among the information on the display device.
