

[ABSTRACT]

The problem to be solved by the present invention is to provide a drug containing a compound having an agonistic activity to STING as an active ingredient.

As a result of intensive studies by the inventors of the present invention, the
 5 compound represented by the following general formula (I-1):

[in the formula, all symbols represent the same meanings as described in the present specification.] or the like, having an agonistic activity to STING, as a substance capable of solving such problems, was found and this invention was completed.

10 Since the compound represented by the general formula (I-1) or the like of the present invention has an agonistic activity to STING, it can be used as an active ingredient of an agent for suppressing the progression of, suppressing the recurrence of and/or treating cancer or infectious disease.
