ABSTRACT

TITLE: SYSTEMS AND METHODS OF MANAGING ITEM PICKUP AT ATTENDED DELIVERY/PICKUP LOCATIONS

Systems and methods for facilitating pick up of items delivered to attended delivery/pickup locations. In various embodiments, the system is configured for confirming an identity of a person attempting to pick up a parcel from an attended delivery/pickup location before releasing the parcel to the person. The system may confirm the identity by receiving identifying information, by confirming a geographic location of a person attempting to retrieve the parcel, etc. In some embodiments, the system may be configure to enable parcel recipients to provide other persons the authorization to retrieve parcels and may be further configured to confirm this authorization before releasing parcels to a person other than the intended parcel recipient.
