Abstract

The invention relates to a data processing method for the time-optimized calculation and placing to the account of prices for a performance rendered for a customer by an enterprise.

The price is calculated and placed to the account in accordance with a price model with at least the following processing steps:

(1) calculating the price for the respective performance rendered by means of the price model applicable for the customer;

(2) storing the calculated price;

(3) examining by means of the price model whether the performance rendered for this business case has to be placed to the account of the customer with value date immediately on performance of the business, or at a later point of time;

(4) immediate placing of the calculated price to the account of the customer with value date if the price determined for the business case has to be placed to the account with immediate value date on performance of the business.
