(54) Title: APPARATUS AND METHOD FOR A LOW POWER TRANSMISSION QUASI-CO-LOCATION IN A WIRELESS
NETWORK

200

Figure 2

(57) Abstract: Various aspects of the present disclosure relate to: receiving (602) configuration information associated with a quasi-co-
location (QCL) relationship between a low power transmission and a source reference signal, wherein the low power transmission
is configured to be received by a low power processor and the source reference signal is configured to be received by a main radio
processor; measuring (604) a signal strength associated with the low power transmission using the low power processor or main radio
processor; preparing (606) a low power channel state information (CSI) report based on the measured signal strength; and transmitting
(608) the low power CSI report.
