(54) Title: SYSTEM, KIT, METHOD AND PROCESS FOR HANDLING A SAMPLE

(57) Abstract: A system and method for handling a sample comprising particles (CE) bound to ferromagnetic particles (FP); a magnetic field is created in a container (3) inside which the sample (TS) is arranged so that the particles (CE) are attracted against a side wall (4) of the container (3); part of the sample (TS) is sucked through a cannula (8), kept in position by an alignment device (10) so as not to be in contact with the side wall (4) of the container (3), without withdrawing the particles (CE) that remain in contact with the side wall (4).
